C 2655 (Dunand 195 c)

l nẓr {b}{n} {r}bʿt bn s¹lḥ

By Nẓr son of Rbʿt son of S¹lḥ

Provenance:
Zalaf (j) "In the neighbourhood of Zalaf, near Wādī al-Shām " (C p. 304)., Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

year that the people of of Rhy struggled against the Nabataeans. And he was on the look-out for the Ḥwlt. So O {Lt} [grant] security.

Apparatus Criticus:
C: *rh* for *rhy*; *lt* for *{l}t*; *s¹[l]m* for *s¹lm*

Provenance:
Zalaf (j) "In the neighbourhood of Zalaf, near Wādī al-Shām " (C p. 304)., Rif Dimashq, Syria
[Latitude/Longitude: 32.9168 / 37.3266]
North of the barrage of the modern dam at Ishbikkat al-Namārah the Wādī al-Shām runs for approximarely 4 km to Zalaf. The modern road runs to the west of it, but there is an old track running along the eatsern side of the wadi bed. Both banks of the wadi, but in particular the right one, have a series of promontories. This inscription was found by the Safaitic Epigraphic Survey Programme in a group of cairns on the right bank, on the fourth promontory, going upstream south-west of Zalaf.

References:

l ḥḍg bn s¹wr bn ḥn{y}[n]

By Ḥḍg son of S¹wr son of Ḥnyn

Apparatus Criticus:
C: l ḥḍg bn s¹wr bn ḥny[n]

Provenance:
Zalaf (j) "In the neighbourhood of Zalaf, near Wādī al-Shām " (C p. 304)., Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

C: l brd bn rhn bn s¹gʿ

Provenance:
Zalaf (j) "In the neighbourhood of Zalaf, near Wādī al-Shām " (C p. 304)., Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

C 2700 (Dunand 226 b)

l ḥmyn bn ġḍḍt

By Ḥmyn son of Ġḍḍt

Provenance:
Zalaf (j) "In the neighbourhood of Zalaf, near Wādī al-Shām " (C p. 304)., Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

Provenance:
Zalaf (j) "In the neighbourhood of Zalaf, near Wādī al-Shām " (C p. 304)., Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

Provenance:
Zalaf (j) "In the neighbourhood of Zalaf, near Wādī al-Shām " (C p. 304)., Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qaʿqūl,

but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

C 2775 (Dunand 259 b)

l s¹krn bn rbḥ bn ʾbd bn ʾs¹d bn ṭrd bn nqr bn ʾdm w wgʿ ʿl- nr w ʿl- ṣfwn w ʿl- ks¹ṭ f w(l)(h) ʿl- ʾs²yʿ -h w ʿwr l- ḏ {ʿ}wr h- [ḫ]ṭṭ

By S¹krn son of Rbḥ son of ʾbd son of ʾs¹d son of Ṭrd son of Nqr son of ʾdm and he grieved in pain for Nr and for Ṣfwn and for Ks¹ṭ and so {he was distraught} for his companions and blindness to whoever would scratch out the carving

Provenance:
Zalaf (j) "In the neighbourhood of Zalaf, near Wādī al-Shām " (C p. 304)., Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

Zalaf (j) "In the neighbourhood of Zalaf, near Wādī al-Shām " (C p. 304)., Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

Provenance:
Zalaf (j) "In the neighbourhood of Zalaf, near Wādī al-Shām " (C p. 304)., Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

C 2819 (Dunand 282 c)

l m{n}{f} bn ḥg

By Mnf son of Ḥg

Provenance:
Zalaf (j) "In the neighbourhood of Zalaf, near Wādī al-Shām " (C p. 304)., Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

C 2850 (Dunand 299 a)

[l] ktt [b][n] (ʾ)lh bn [b]{ʾ}ḫ(h)

By Ktt son of ʾlh son of Bʾḫh

Provenance:
Zalaf (j) "In the neighbourhood of Zalaf, near Wādī al-Shām " (C p. 304)., Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

C 2866 (Dunand 304 b)

l ʾʿmm bn ḍr

By ʾʿmm son of Ḍr

Provenance:
Zalaf (j) "In the neighbourhood of Zalaf, near Wādī al-Shām " (C p. 304)., Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

C 2882 (Dunand 572)

l yʿly bn bḍf{h}

By Yʿly son of Bḍfh

Provenance:
Zalaf (j) "In the neighbourhood of Zalaf, near Wādī al-Shām " (C p. 304)., Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

l rb[b][n] bn bʿḏh bn ṣrʾ

By Rbbn {son of} Bʿḏh son of Ṣrʾ

Apparatus Criticus:
C: l rbbn bn bʿḏh bn ṣrʾ

Provenance:
Zalaf (j) "In the neighbourhood of Zalaf, near Wādī al-Shām " (C p. 304)., Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. C's description of the location the present inscription is useless since it does not give the starting point from which the site is "3 km upstream towards Zalaf".

C 2928 (Dunand 731 a)

l ʾlh bn nʿg h- bkrt

By ʾlh son of Nʿg is the young she-camel

Provenance:
Zalaf (k) "On the left bank of Wādī al-Shām, about 3 km upstream towards Zalaf" (C p. 381)., Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. C's description of the location the present inscription is useless since it does not give the starting point from which the site is "3 km upstream towards Zalaf".

C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. C's description of the location the present inscription is useless since it does not give the starting point from which the site is "3 km upstream towards Zalaf".

C 2956 (Dunand 746 a)

l ḫdl bn s¹wd bn ʾ{l}{y} bn ḥy

By Ḫdl son of S¹wd son of ʾʿly son of Ḥy

Provenance:
Zalaf (k) "On the left bank of Wādī al-Shām, about 3 km upstream towards Zalaf" (C p. 381)., Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. C's description of the location the present inscription is useless since it does not give the starting point from which the site is "3 km upstream towards Zalaf".

[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

C's description of the location the present inscription is useless since it does not give the starting point from which the site is "3 km upstream towards Zalaf".

C 2985 (Dunand 754 a)

l ḫl'l b()n {ʿ}ḏ b[n] {f}ḥlt

By Ḫl'l {son of} {ʿḏ} {son of} {Fḥlt}

Apparatus Criticus:
C: *l ḫl'l bn {h}ʿḏr (h-) ḥlt*

Provenance:
Zalaf (k) "On the left bank of Wādī al-Shām, about 3 km upstream towards Zalaf" (C p. 381)., Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. C's description of the location the present inscription is useless since it does not give the starting point from which the site is "3 km upstream towards Zalaf".

C 2997 (Dunand 758 e)

l ʾʾs¹d bn mḥlm bn rbʾl bn ʾnʿm bn ʾs¹ w ḥll h- dr w tẓr h- s¹my f h bʿls¹mn rwḥ w wqd l- ḏ yʿwr h- {s¹}f{r}

By ʾʾs¹d son of Mḥlm son of Rbʾl son of ʾnʿm son of ʾs¹ and Ḥll the Dr and he camped here while he awaited the rains, so, O Bʿls¹mn, send the winds; and may he who would efface this {writing} be scorched by fire.

Apparatus Criticus:
C: h- s{f}{r}

Provenance:
Zalaf (k) "On the left bank of Wādī al-Shām, about 3 km upstream towards Zalaf" (C p. 381)., Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. C's description of the location the present inscription is useless since it does not give the starting point from which the site is "3 km upstream towards Zalaf".

This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. C's description of the location the present inscription is useless since it does not give the starting point from which the site is "3 km upstream towards Zalaf".

By Hln son of ʾny son of ʿds¹ son of Mʿlṭ son of Qmr son of Rfʾt

Provenance:
Zalaf (k) "On the left bank of Wādī al-Shām, about 3 km upstream towards Zalaf" (C p. 381)., Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. C's description of the location the present inscription is useless since it does not give the starting point from

which the site is "3 km upstream towards Zalaf".

C 3042 (Dunand 776 i)

l wrʾ

By Wrʾ

Provenance:
Zalaf (k) "On the left bank of Wādī al-Shām, about 3 km upstream towards Zalaf" (C p. 381)., Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. C's description of the location the present inscription is useless since it does not give the starting point from which the site is "3 km upstream towards Zalaf".

This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. C's description of the location the present inscription is useless since it does not give the starting point from which the site is "3 km upstream towards Zalaf".

C: *lms[1]hns[1]ḫs[1]ḫʾh h- ʿlgt l- s[1]mḥ hm* "---- this she-camel. For S[1]mḥ refuge"

Provenance:
Zalaf (k) "On the left bank of Wādī al-Shām, about 3 km upstream towards Zalaf" (C p. 381)., Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. C's description of the location the present inscription is useless since it does not give the starting point from which the site is "3 km upstream towards Zalaf".

C 3085 (Dunand 795)

l {r}b bn nfr bn ṭḥrt bn (ʾ)ws^{1}r w h rḍw ġnmt m- s^{2}nʾ

By {Rb} son of Nfr son of Ṭḥrt son of {ʾws^{1}r} and O Rḍw [grant] booty from enemies

Apparatus Criticus:
C: l {r}b bn nfr bn ṭḥrt bn (h)ws^{1}r w h rḍw ġnmt m- s^{2}nʾ

Provenance:
Zalaf (k) "On the left bank of Wādī al-Shām, about 3 km upstream towards Zalaf" (C p. 381)., Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. C's description of the location the present inscription is useless since it does not give the starting point from which the site is "3 km upstream towards Zalaf".

[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover

a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. C's description of the location the present inscription is useless since it does not give the starting point from which the site is "3 km upstream towards Zalaf".

Zalaf (l) "On the left bank of Wādī al-Shām, in the area of Zalaf, downstream" (C p. 405), Rif Dimashq, Syria

[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, C's description is so vague as to be useless.

C 3130 (Dunand 823)

l ql bn ʾzm{r} bn brʾ bn s²wʾ

By Ql son of ʾzmr son of Brʾ son of S²wʾ

Provenance:
Zalaf (l) "On the left bank of Wādī al-Shām, in the area of Zalaf, downstream" (C p. 405), Rif Dimashq, Syria [Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, C's description is so vague as to be useless.

C: *()lḥny bn mʿn bn ḥny* for *l {s²}ḥly bn m----ḥly*; *wgm* [misprint ?] for *ndm*; *trḥ* "sadness" for "perished"; *ʾḫ -h* for *ṣḫl*.

Provenance:
Zalaf (l) "On the left bank of Wādī al-Shām, in the area of Zalaf, downstream" (C p. 405), Rif Dimashq, Syria [Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, C's description is so vague as to be useless.

By S²zbʾ

Provenance:
Zalaf (m) "On the left bank of Wādī al-Shām, not far from Zalaf from the south to the west" (C p. 410)., Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. It is not clear what C's description means.

C 3174 (Dunand 851 c)

l ġwn bn ʿ{l}hm

By Ġwn son of ʿlhm

Apparatus Criticus:
C: l ġwn bn ʿlhm

Provenance:
Zalaf (m) "On the left bank of Wādī al-Shām, not far from Zalaf from the south to the west" (C p. 410)., Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. It is not clear what C's description means.

C 3189 (Dunand 857 a)

l ʾs¹ḫmn bn ẓlm bn ms¹k bn ʿ{b}[y]

By ʾs¹ḫmn son of Ẓlm son of Ms¹k son of ʿby

Apparatus Criticus:
C: l ʾs¹ḫmn bn ẓlm bn ms¹k bn ʿr[y]

Provenance:
Zalaf (m) "On the left bank of Wādī al-Shām, not far from Zalaf from the south to the west" (C p. 410)., Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. It is not clear what C's description means.

C 3204 (Dunand 865)

l wdm bn ʿs¹y h- ẓlt s¹nt myt (r)b(ʾ)l

By Wdm son of ʿs¹y is the shelter the year {Rbʾl} died

Provenance:
Zalaf (m) "On the left bank of Wādī al-Shām, not far from Zalaf from the south to the west" (C p. 410)., Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. It is not clear what C's description means.

C 3219 (Dunand 872)

l wdm bn ʿs¹y ḥḍr (h-) [d]r w (h) rḍw

By Wdm son of ʿs¹y [and] he camped in this place near a permanent source of water and {O} Rḍw

Provenance:
Zalaf (m) "On the left bank of Wādī al-Shām, not far from Zalaf from the south to the west" (C p. 410)., Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. It is not clear what C's description means.

C 3244 (Wetzstein 223; Dussaud V 241 a)

l bhl bn q{n}s¹

By Bhl son of Qns¹

Provenance:
Ishbikkat al-Namārah, Rif Dimashq, Syria
[Latitude/Longitude: 32.89645 / 37.31101]
C's location of this inscription as "on the track from al-ʿUdaysīyah to al-Namārah, not far from al-Namārah" (C p. 420), is less precise than Dussaud & Macler's: "at the beginning of Ishbikkat [al-Namārah]" (1901: 88).

This is the wide area, now covered by the basin of the modern dam north-west of al-Namārah, where water from the winter and spring floods collects and usually lasts well into the dry season. There are numerous inscriptions along its edges and on "islands" within the basin, see, for instance the HN and MN texts. It should be noted that this is not, of course, the same place as the Wādī Ishbikkah on the Ǧabal al-ʿArab, mentioned in Dussaud & Macler 1903: 28.

C 3249 (LSI 111; LP 960; Is.H 195)

l ʾnʿm bn ʾs¹wd

By ʾnʿm son of ʾs¹wd

Provenance:
Al-ʿĪsāwī, Rif Dimashq, Syria
[Latitude/Longitude: 32.89645 / 37.31101]
Al-ʿĪsāwī is the name of a probably ancient well between two headlands on the eastern side of the Wādī Shām as it runs northwards from the modern Al-Namārah dam to the Ruḥbah. The well is large, stone lined and with stone water-channels running from it. The main concentration of published inscriptions is on the top of the northern headland, but there also many inscriptions on its south-west slopes, coming down to the well and on the southern headland, on the crest of which is a stone tower. Littmann visited the site twice when he and other members of the expeditions copied some 450 inscriptions. Between 1996 and 2003, the Safaitic Epigraphic Survey Programme [SESP] made a comprehensive survey of the site recording over 3500 inscriptions.

l ʿg bn ẓnn bn s¹ʿd bn ẓnn bn ẓnʾl

By ʿg son of Ẓnn son of S¹ʿd son of Ẓnn son of Ẓnʾl

Provenance:
Al-ʿĪsāwī, Rif Dimashq, Syria
[Latitude/Longitude: 32.903569 / 37.320314]
Al-ʿĪsāwī is the name of a probably ancient well between two headlands on the eastern side of the Wādī Shām as it runs northwards from the modern Al-Namārah dam to the Ruḥbah. The well is large, stone lined and with stone water-channels running from it. The main concentration of published inscriptions is on the top of the northern headland, but there also many inscriptions on its south-west slopes, coming down to the well and on the southern headland, on the crest of which is a stone tower. Littmann visited the site twice

when he and other members of the expeditions copied some 450 inscriptions. Between 1996 and 2003, the Safaitic Epigraphic Survey Programme [SESP] made a comprehensive survey of the site recording over 3500 inscriptions, but could not find this particular text.

Al-ʿĪsāwī is the name of a probably ancient well between two headlands on the eastern side of the Wādī Shām as it runs northwards from the modern Al-Namārah dam to the Ruḥbah. The well is large, stone lined and with stone water-channels running from it. The main concentration of published inscriptions is on the top of the northern headland, but there also many inscriptions on its south-west slopes, coming down to the well and on the southern headland, on the crest of which is a stone tower. Littmann visited the site twice when he and other members of the expeditions copied some 450 inscriptions. Between 1996 and 2003, the Safaitic Epigraphic Survey Programme [SESP] made a comprehensive survey of the site recording over 3500 inscriptions

C 3264 (LSI 126; LP 346; Is.Mu 96)

l wrd bn tm bn <<>>ʿbṭ<<>>

By Wrd son of Tm son of ʿbṭ

Apparatus Criticus:
LP and C: *ʿbṭ* for *{ṣ}ʿbṭ.*

Commentary:
Note that in the arrangement in C, 3264 belongs in Articulus XXIII (al-ʿĪsāwī) rather than Articulus XXIV. A chiselled *ṣ* between *bn* and *ʿbṭ* and three other possible letters around the end of the text were read by Littmann as LP 347 (*l ṣʿb*). But their position on the stone and their distribution in and around C 3264 (= LP 346) make this improbable.

Provenance:

C 3265 (Dussaud V 206)

l mqtl bn btm[h]

By Mqtl son of Btmh

Provenance:
"Near the track leading from the mouth of Wādī al-Gharz to al-Namārah" (C p. 425), "on the right [= west] of the road" (Dussaud & Macler 1901: 86), Rif Dimashq, Syria
[Latitude/Longitude: 32.9035 / 37.2962]
The location of these texts is complicated by the fact that a small wadi debouches into the Ruḥbah at a point some 1.2 km south-west of the mouth of Wādī al-Gharz, near the point at which the "Roman road" meets the Ruḥbah. The douchment of this wadi seems sometimes to have been confused with that of the Wādī al-Gharz. If this was so in this case, Dussaud & Macler may have been following the "Roman road" from the point at which this unnamed wadi debouches into the Ruḥbah southwards to al-Namārah, in which case these inscriptions would belong with C 2276–2319

Latitude: southern end of the "Roman road" approximately 32.9035, northern end approximately 32.9504
Longitude: southern end of the "Roman road" approximately 37.2962, northern end approximately 37.2951

References:

C 3276 (Dussaud V 216 a)

l s¹ʿd

By S¹ʿd

Provenance:
"Near the track leading from the mouth of Wādī al-Gharz to al-Namārah" (C p. 425), "on the right [= west] of the road" (Dussaud & Macler 1901: 86), Rif Dimashq, Syria
[Latitude/Longitude: 32.9035 / 37.2962]
The location of these texts is complicated by the fact that a small wadi debouches into the Ruḥbah at a point some 1.2 km south-west of the mouth of Wādī al-Gharz, near the point at which the "Roman road" meets the Ruḥbah. The douchment of this wadi seems sometimes to have been confused with that of the Wādī al-Gharz. If this was so in this case, Dussaud & Macler may have been following the "Roman road" from the point at which this unnamed wadi debouches into the Ruḥbah southwards to al-Namārah, in which case these inscriptions would belong with C 2276–2319

Latitude: southern end of the "Roman road" approximately 32.9035, northern end approximately 32.9504
Longitude: southern end of the "Roman road" approximately 37.2962, northern end approximately 37.2951

References:

C 3282 (Dussaud V 220)

l wzn{t} (b)n ----

By Wznt son of

Provenance:
"At the entrance of Ishbikkat [al-Namārah]" (C p. 427), Rif Dimashq, Syria
[Latitude/Longitude: 32.8935 / 37.3068]
The co-ordinates are based on taking "the entrance" in C's description as the point at which Wādī Shām widens into the area now covered by the basin of the modern dam north-west of al-Namārah, where water from the winter and spring floods collects and usually lasts well into the dry season. There are numerous inscriptions along its edges and on "islands" within the basin, see, for instance the HN and MN texts. It should be noted that this is not, of course, the same place as the Wādī Ishbikkah on the Ǧabal al-ʿArab, mentioned in Dussaud & Macler 1903: 28.

C 3293 (Dussaud V 234)

l zb(y) bn ḥnn w {ġ}{z}{z} b- rḥbt f ʾyb b- rʾ(y) gml

By {Zby} son of Ḥnn and he raided in the Ruḥbah, and then he returned during the {heliacal rising} of Gemini

Apparatus Criticus:
C: *w (ḥ)[l] b- rḥbt f ʾyb b- bʾr gml* "and he camped near the Ruḥbah. And he came to well of the camels."
Macdonald 1992: 24 p. 34 n. 15-16: *w {ġ}{z}{z} b- rḥbt f {ṣ}yr b- rʾb gml* "and he {raided} in the Ruḥbah and then {returned} to the watering place with a herd of seventy camels"

Al-Jallad 2016: 100: *w (ḥ)[l] b- rḥbt f ʾyb b- rʾ(y) gml* ""and he camped at Rḥbt, as he returned [from the inner desert] during the {heliacal rising} of Gemini."

Commentary:
C's reading *(ḥ)[l]* is restored from three straight lines which we suggest would be better read *{ġ}{z}{z}* "he raided" .

Provenance:
"At the entrance of Ishbikkat [al-Namārah]" (C p. 427), Rif Dimashq, Syria
[Latitude/Longitude: 32.8935 / 37.3068]
The co-ordinates are based on taking "the entrance" in C's description as the point at which Wādī Shām widens into the area now covered by the basin of the modern dam north-west of al-Namārah, where water from the winter and spring floods collects and usually lasts well into the dry season. There are numerous inscriptions along its edges and on "islands" within the basin, see, for instance the HN and MN texts. It should be noted that this is not, of course, the same place as the Wādī Ishbikkah on the Ǧabal al-ʿArab, mentioned in Dussaud & Macler 1903: 28.

[Latitude/Longitude: 32.8935 / 37.3068]
The co-ordinates are based on taking "the entrance" in C's description as the point at which Wādī Shām widens into the area now covered by the basin of the modern dam north-west of al-Namārah, where water from the winter and spring floods collects and usually lasts well into the dry season. There are numerous inscriptions along its edges and on "islands" within the basin, see, for instance the HN and MN texts. It should be noted that this is not, of course, the same place as the Wādī Ishbikkah on the Ǧabal al-ʿArab, mentioned in Dussaud & Macler 1903: 28.

Provenance:
"Ishbikkat [al-Namārah]" (C p. 431), Rif Dimashq, Syria
[Latitude/Longitude: 32.89645 / 37.31101]
Ishbikkat al-Namārah is the wide area, now covered by the basin of the modern dam north-west of al-Namārah, where water from the winter and spring floods collects and usually lasts well into the dry season. There are numerous inscriptions along its edges and on "islands" within the basin, see, for instance the HN and MN texts. It should be noted that this is not, of course, the same place as the Wādī Ishbikkah on the Ǧabal al-ʿArab, mentioned in Dussaud & Macler 1903: 28.

Ishbikkat al-Namārah is the wide area, now covered by the basin of the modern dam north-west of al-Namārah, where water from the winter and spring floods collects and usually lasts well into the dry season. There are numerous inscriptions along its edges and on "islands" within the basin, see, for instance the HN and MN texts. It should be noted that this is not, of course, the same place as the Wādī Ishbikkah on the Ǧabal al-ʿArab, mentioned in Dussaud & Macler 1903: 28.

"Ishbikkat [al-Namārah]" (C p. 431), Rif Dimashq, Syria
[Latitude/Longitude: 32.89645 / 37.31101]
Ishbikkat al-Namārah is the wide area, now covered by the basin of the modern dam north-west of al-Namārah, where water from the winter and spring floods collects and usually lasts well into the dry season. There are numerous inscriptions along its edges and on "islands" within the basin, see, for instance the HN and MN texts. It should be noted that this is not, of course, the same place as the Wādī Ishbikkah on the Ǧabal al-ʿArab, mentioned in Dussaud & Macler 1903: 28.

Ishbikkat al-Namārah is the wide area, now covered by the basin of the modern dam north-west of al-Namārah, where water from the winter and spring floods collects and usually lasts well into the dry season. There are numerous inscriptions along its edges and on "islands" within the basin, see, for instance the HN and MN texts. It should be noted that this is not, of course, the same place as the Wādī Ishbikkah on the Ǧabal al-ʿArab, mentioned in Dussaud & Macler 1903: 28.

C 3379 (Wetzstein 300; W.Tafel I, II.b)

l ʾs¹ḫr bn s²ḥtr bn ʾs¹ḫr w wgm ʿl- ʾbgr w qṣf {f} h lt rwḥ (l-) ḏ (ḫ)rṣ

By ʾs¹ḫr son of S²ḥtr son of ʾs¹ḫr and he grieved for ʾbgr and was anxious and so O Lt [grant] relief to him who is hungry and cold

Apparatus Criticus:
C: *w qṣf* "and abundance" for "and was anxious"; *l- ḏ ḥrṣ* "for him who is watching" for "for him who is hungry and cold"

Provenance:
Ishbikkat al-Namārah, Rif Dimashq, Syria
[Latitude/Longitude: 32.89645 / 37.31101]
C, following Grimme 1929: 111, places this text with C 3380–3390 which he says come from "the bank of Wādī Shām" (p. 437). However, the plate showing this text in Müller DH 1876 is labelled "copied at Ishbikat al-Namārah", which is, of course, within the Wādī Shām. Ishbikkat al-Namārah is the wide area, now covered by the basin of the modern dam north-west of al-Namārah, where water from the winter and spring floods collects and usually lasts well into the dry season. There are numerous inscriptions along its edges and on "islands" within the basin, see, for instance the HN and MN texts. It should be noted that this is not, of course, the same place as the Wādī Ishbikkah on the Ǧabal al-ʿArab, mentioned in Dussaud & Macler 1903: 28.

C 3391 (Waddington 198 a)

l {d}r bn ms¹k

By Ḏr son of Ms¹k

Apparatus Criticus:
C: l hr bn ms¹k

Provenance:
"The area of al-Namārah" (C p. 438), Rif Dimashq, Syria
[Latitude/Longitude: 32.88545 / 37.29163]
Al-Namārah itself is an "island" in a basin at the confluence of the Wādī al-Ṣawṭ and the Wādī al-Shām. The island rises to a considerable height above the wadi bed. On it's top are the ruins of a Roman fort the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Safaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

C 3393 (Waddington 198 c)

l ṣlm bn {ṭ}d

By Ṣlm son of Ṭd

Apparatus Criticus:
C: l ṣlm bn ṭd

Provenance:
"The area of al-Namārah" (C p. 438), Rif Dimashq, Syria
[Latitude/Longitude: 32.88545 / 37.29163]
Al-Namārah itself is an "island" in a basin at the confluence of the Wādī al-Ṣawṭ and the Wādī al-Shām. The island rises to a considerable height above the wadi bed. On it's top are the ruins of a Roman fort the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Safaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

C 3406 (Waddington 219)

l ḏkr bn ḥl

By Ḏkr son of Ḥl

Provenance:
"The area of al-Namārah" (C p. 438), Rif Dimashq, Syria
[Latitude/Longitude: 32.88545 / 37.29163]
Al-Namārah itself is an "island" in a basin at the confluence of the Wādī al-Ṣawṭ and the Wādī al-Shām. The island rises to a considerable height above the wadi bed. On it's top are the ruins of a Roman fort the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Safaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there

were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

[Latitude/Longitude: 32.88545 / 37.29163]
Al-Namārah itself is an "island" in a basin at the confluence of the Wādī al-Ṣawṭ and the Wādī al-Shām. The island rises to a considerable height above the wadi bed. On it's top are the ruins of a Roman fort the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Safaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

l qyz bn ḍġ

By Qyz son of Ḍġ

Provenance:
"The area of al-Namārah" (C p. 438), Rif Dimashq, Syria
[Latitude/Longitude: 32.88545 / 37.29163]
Al-Namārah itself is an "island" in a basin at the confluence of the Wādī al-Ṣawṭ and the Wādī al-Shām. The island rises to a considerable height above the wadi bed. On it's top are the ruins of a Roman fort the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Safaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

[Latitude/Longitude: 32.88545 / 37.29163]
Al-Namārah itself is an "island" in a basin at the confluence of the Wādī al-Ṣawṭ and the Wādī al-Shām. The island rises to a considerable height above the wadi bed. On it's top are the ruins of a Roman fort the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Safaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

Provenance:
Al-Namārah (C p. 443), Rif Dimashq, Syria
[Latitude/Longitude: 32.88545 / 37.29163]
Al-Namārah itself is an "island" in a basin at the confluence of the Wādī al-Ṣawṭ and the Wādī al-Shām. The island rises to a considerable height above the wadi bed. On it's top are the ruins of a Roman fort the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Safaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

C 3468 (Vogüé 269 a)

l mʿn

By Mʿn

Provenance:
Al-Namārah (C p. 443), Rif Dimashq, Syria
[Latitude/Longitude: 32.88545 / 37.29163]
Al-Namārah itself is an "island" in a basin at the confluence of the Wādī al-Ṣawṭ and the Wādī al-Shām. The island rises to a considerable height above the wadi bed. On it's top are the ruins of a Roman fort the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Safaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

l ʾfs¹ bn [ʿ](d)s¹ bn m[ʿ]lṭ

By ʾfs¹ son of ʿds¹ son of Mʿlṭ

Provenance:
Al-Namārah (C p. 443), Rif Dimashq, Syria
[Latitude/Longitude: 32.88545 / 37.29163]
Al-Namārah itself is an "island" in a basin at the confluence of the Wādī al-Ṣawṭ and the Wādī al-Shām. The island rises to a considerable height above the wadi bed. On it's top are the ruins of a Roman fort the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Safaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

There are many Safaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there

were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

Provenance:
Al-Namārah (C p. 443), Rif Dimashq, Syria
[Latitude/Longitude: 32.88545 / 37.29163]
Al-Namārah itself is an "island" in a basin at the confluence of the Wādī al-Ṣawṭ and the Wādī al-Shām. The island rises to a considerable height above the wadi bed. On it's top are the ruins of a Roman fort the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Safaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

Provenance:
Al-Namārah (C p. 443), Rif Dimashq, Syria
[Latitude/Longitude: 32.88545 / 37.29163]
Al-Namārah itself is an "island" in a basin at the confluence of the Wādī al-Ṣawṭ and the Wādī al-Shām. The island rises to a considerable height above the wadi bed. On it's top are the ruins of a Roman fort the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Safaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

l ḥ(g)ʾl bn rḥl

By Ḥgʾl son of Rḥl

Provenance:

Al-Namārah (C p. 443), Rif Dimashq, Syria
[Latitude/Longitude: 32.88545 / 37.29163]
Al-Namārah itself is an "island" in a basin at the confluence of the Wādī al-Ṣawṭ and the Wādī al-Shām. The island rises to a considerable height above the wadi bed. On it's top are the ruins of a Roman fort the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Safaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

C 3530 (Wetzstein 245 b)

---- ms^{1}r w ngs^2

---- Ms^{1}r and he drove [livestock]

Apparatus Criticus:
C: nʿs^2 "he celebrated" for *ngs^2* "he drove [livestock]

Provenance:
Al-Namārah (C p. 443), Rif Dimashq, Syria
[Latitude/Longitude: 32.88545 / 37.29163]
Al-Namārah itself is an "island" in a basin at the confluence of the Wādī al-Ṣawṭ and the Wādī al-Shām. The island rises to a considerable height above the wadi bed. On it's top are the ruins of a Roman fort the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Safaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

Al-Namārah (C p. 443), Rif Dimashq, Syria
[Latitude/Longitude: 32.88545 / 37.29163]
Al-Namārah itself is an "island" in a basin at the confluence of the Wādī al-Ṣawṭ and the Wādī al-Shām. The island rises to a considerable height above the wadi bed. On it's top are the ruins of a Roman fort the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Safaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

C 3553 (Wetzstein 272)

l ḍf bn mrʾ

By Ḍf son of Mrʾ

Provenance:
Al-Namārah (C p. 443), Rif Dimashq, Syria
[Latitude/Longitude: 32.88545 / 37.29163]
Al-Namārah itself is an "island" in a basin at the confluence of the Wādī al-Ṣawṭ and the Wādī al-Shām. The island rises to a considerable height above the wadi bed. On it's top are the ruins of a Roman fort the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Safaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

Al-Namārah itself is an "island" in a basin at the confluence of the Wādī al-Ṣawṭ and the Wādī al-Shām. The island rises to a considerable height above the wadi bed. On it's top are the ruins of a Roman fort the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Safaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

C 3577 (Wetzstein 296)

l wqf bn ʾgt

By Wqf son of ʾgt

Provenance:

Al-Namārah (C p. 443), Rif Dimashq, Syria
[Latitude/Longitude: 32.88545 / 37.29163]
Al-Namārah itself is an "island" in a basin at the confluence of the Wādī al-Ṣawṭ and the Wādī al-Shām. The island rises to a considerable height above the wadi bed. On it's top are the ruins of a Roman fort the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Safaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

C 3588 (Dussaud M 418)

l s¹d bn wʿl w wrd

By S¹d son of Wʿl and he came to a watering-place

Provenance:
Al-Namārah (C p. 443), Rif Dimashq, Syria
[Latitude/Longitude: 32.88545 / 37.29163]
Al-Namārah itself is an "island" in a basin at the confluence of the Wādī al-Ṣawṭ and the Wādī al-Shām. The island rises to a considerable height above the wadi bed. On it's top are the ruins of a Roman fort the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Safaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

C 3600 (Dussaud M 430)

l hqm bn bʿ----

By Hqm son of Bʿ

Provenance:
Al-Namārah (C p. 443), Rif Dimashq, Syria
[Latitude/Longitude: 32.88545 / 37.29163]
Al-Namārah itself is an "island" in a basin at the confluence of the Wādī al-Ṣawṭ and the Wādī al-Shām. The island rises to a considerable height above the wadi bed. On it's top are the ruins of a Roman fort the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Safaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

C 3612 (Dussaud M 443)

l nr bn hdkʿ

By Nr son of Hdkʿ

Provenance:
Al-Namārah (C p. 443), Rif Dimashq, Syria
[Latitude/Longitude: 32.88545 / 37.29163]
Al-Namārah itself is an "island" in a basin at the confluence of the Wādī al-Ṣawṭ and the Wādī al-Shām. The island rises to a considerable height above the wadi bed. On it's top are the ruins of a Roman fort the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Safaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

l ṣ'r bn 'wdd

By Ṣ'r son of 'wdd

Provenance:
Al-Namārah (C p. 443), Rif Dimashq, Syria
[Latitude/Longitude: 32.88545 / 37.29163]
Al-Namārah itself is an "island" in a basin at the confluence of the Wādī al-Ṣawṭ and the Wādī al-Shām. The island rises to a considerable height above the wadi bed. On it's top are the ruins of a Roman fort the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Safaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

Provenance:
The environs of al-Namārah (C p. 443), Rif Dimashq, Syria
[Latitude/Longitude: 32.88545 / 37.29163]
This is one of only four inscriptions for which Graham gave even a rough provenance, "in the neigbourhood of al-Namārah" (1858: 714). Al-Namārah itself is an "island" in a basin at the confluence of the Wādī al-Ṣawṭ and the Wādī al-Shām. The island rises to a considerable height above the wadi bed. On it's top are the ruins of a Roman fort the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Safaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

Provenance:

The environs of al-Namārah (C p. 443), Rif Dimashq, Syria
[Latitude/Longitude: 32.88545 / 37.29163]
This is not one of the four texts which Graham said (1858: 714) came from "the neigbourhood of al-Namārah" (1858: 714). C probably placed it here because, in Graham 1860: pl. III, it is placed above the text (22 b) which C identifies with Graham 1858: no. 21, which is among those from "the neigbourhood of al-Namārah" (1858: 714). Al-Namārah itself is an "island" in a basin at the confluence of the Wādī al-Ṣawṭ and the Wādī al-Shām. The island rises to a considerable height above the wadi bed. On it's top are the ruins of a Roman fort the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. Provenance:
"Between al-Namārah and al-Ḥifnah" (C p. 462), Rif Dimashq and or al-Suwaydah, Syria
[Latitude/Longitude: 32.88545 / 37.29163]
Al-Ḥifnah is at a point at which Wādī al-Shām becomes a wide gorge, and the site of al-Ḥifna runs downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Mu'azzin, Nehmé

1996. Littmann wrote "Al-Ḥifnah is a water-place in the Wādī al-Shām, between the Ḥawrān mountains [Ǧabal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).

Latitude: Al-Namārah 32.88545, Al-Ḥifnah 32.76784

By Ḥddn son of Nṣr

Provenance:
Al-Ḥifnah, Al-Suwaydah, Syria
[Latitude/Longitude: 32.76784 / 37.00326]
Al-Ḥifnah is at a point at which Wādī al-Shām becomes a wide gorge, and the site of al-Ḥifna runs downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Muʾazzin, Nehmé 1996. Littmann wrote "Al-Ḥifnah is a water-place in the Wādī al-Shām, between the Ḥawrān mountains [Ǧabal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).

Al-Ḥifnah, Al-Suwaydah, Syria
[Latitude/Longitude: 32.76784 / 37.00326]
Al-Ḥifnah is at a point at which Wādī al-Shām becomes a wide gorge, and the site of al-Ḥifna runs downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Muʾazzin, Nehmé 1996. Littmann wrote "Al-Ḥifnah is a water-place in the Wādī al-Shām, between the Ḥawrān mountains [Ǧabal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).

Provenance:
Al-Ḥifnah, Al-Suwaydah, Syria
[Latitude/Longitude: 32.76784 / 37.00326]
Al-Ḥifnah is at a point at which Wādī al-Shām becomes a wide gorge, and the site of al-Ḥifna runs downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Muʾazzin, Nehmé 1996. Littmann wrote "Al-Ḥifnah is a water-place in the Wādī al-Shām, between the Ḥawrān mountains [Ǧabal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain

water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).

Al-Ḥifnah, Al-Suwaydah, Syria
[Latitude/Longitude: 32.76784 / 37.00326]
Al-Ḥifnah is at a point at which Wādī al-Shām becomes a wide gorge, and the site of al-Ḥifna runs downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Muʾazzin, Nehmé 1996. Littmann wrote "Al-Ḥifnah is a water-place in the Wādī al-Shām, between the Ḥawrān mountains [Ǧabal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).

h rḍw s¹ʿd bs¹ʾ

O Rḍw help Bs¹ʾ

Provenance:

Al-Ḥifnah, Al-Suwaydah, Syria
[Latitude/Longitude: 32.76784 / 37.00326]
Al-Ḥifnah is at a point at which Wādī al-Shām becomes a wide gorge, and the site of al-Ḥifna runs downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Muʾazzin, Nehmé 1996. Littmann wrote "Al-Ḥifnah is a water-place in the Wādī al-Shām, between the Ḥawrān mountains [Ǧabal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).

Littmann wrote "Al-Ḥifnah is a water-place in the Wādī al-Shām, between the Ḥawrān mountains [Ǧabal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).

l s¹ny bn s¹ny bn mḥnn w w(g)d ʾṯr dd -h f ngʿ kbr f h lh s¹lm l- ḏ (s¹)ʾr w ġyrt w wgm ʿl- mḥlm w ʿl- ẓnn w ʿl- hms¹k

By S¹ny son of S¹ny son of Mḥnn and he found traces of his paternal uncle and so he grieved in pain greatly and so O Lh [grant] security to him who remains and abundance and he grieved for Mḥlm and for Ẓnn and for Hms¹k

Provenance:
Al-Ḥifnah, Al-Suwaydah, Syria
[Latitude/Longitude: 32.76784 / 37.00326]
Al-Ḥifnah is at a point at which Wādī al-Shām becomes a wide gorge, and the site of al-Ḥifna runs downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Muʾazzin, Nehmé 1996. Littmann wrote "Al-Ḥifnah is a water-place in the Wādī al-Shām, between the Ḥawrān mountains [Ǧabal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).

Note that C 3715–3722 are on the same stone as C 3910–3912!

Provenance:
Al-Ḥifnah, Al-Suwaydah, Syria
[Latitude/Longitude: 32.76784 / 37.00326]
Al-Ḥifnah is at a point at which Wādī al-Shām becomes a wide gorge, and the site of al-Ḥifna runs downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Muʾazzin, Nehmé 1996. Littmann wrote "Al-Ḥifnah is a water-place in the Wādī al-Shām, between the Ḥawrān mountains [Ǧabal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).

Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Muʾazzin, Nehmé 1996. Littmann wrote "Al-Ḥifnah is a water-place in the Wādī al-Shām, between the Ḥawrān mountains [Ǧabal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places

it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).

By Ḫṭs¹t son of Flṭt son of Bhs²

Provenance:
Al-Ḥifnah, Al-Suwaydah, Syria
[Latitude/Longitude: 32.76784 / 37.00326]
Al-Ḥifnah is at a point at which Wādī al-Shām becomes a wide gorge, and the site of al-Ḥifna runs downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Muʾazzin, Nehmé 1996. Littmann wrote "Al-Ḥifnah is a water-place in the Wādī al-Shām, between the Ḥawrān mountains [Ǧabal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).

Provenance:
Al-Ḥifnah, Al-Suwaydah, Syria
[Latitude/Longitude: 32.76784 / 37.00326]
Al-Ḥifnah is at a point at which Wādī al-Shām becomes a wide gorge, and the site of al-Ḥifna runs downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Muʾazzin, Nehmé 1996. Littmann wrote "Al-Ḥifnah is a water-place in the Wādī al-Shām, between the Ḥawrān mountains [Ǧabal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).

Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Muʾazzin, Nehmé 1996. Littmann wrote "Al-Ḥifnah is a water-place in the Wādī al-Shām, between the Ḥawrān mountains [Ǧabal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).

Littmann published this inscription twice, once as LP 61 and once as LP 1293.

Provenance:
Al-Ḥifnah, Al-Suwaydah, Syria
[Latitude/Longitude: 32.76784 / 37.00326]
Al-Ḥifnah is at a point at which Wādī al-Shām becomes a wide gorge, and the site of al-Ḥifna runs downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Mu'azzin, Nehmé 1996. Littmann wrote "Al-Ḥifnah is a water-place in the Wādī al-Shām, between the Ḥawrān mountains [Ǧabal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).

[Latitude/Longitude: 32.76784 / 37.00326]
Al-Ḥifnah is at a point at which Wādī al-Shām becomes a wide gorge, and the site of al-Ḥifna runs downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Muʾazzin, Nehmé 1996. Littmann wrote "Al-Ḥifnah is a water-place in the Wādī al-Shām, between the Ḥawrān mountains [Ǧabal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).

C 3803 (Dussaud M 329; LP 44)

l msʾʿr bn ṯry

By Msʾʿr son of Ṯry

Provenance:
Al-Ḥifnah, Al-Suwaydah, Syria
[Latitude/Longitude: 32.76784 / 37.00326]
Al-Ḥifnah is at a point at which Wādī al-Shām becomes a wide gorge, and the site of al-Ḥifna runs downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Muʾazzin, Nehmé 1996. Littmann wrote "Al-Ḥifnah is a water-place in the Wādī al-Shām, between the Ḥawrān mountains [Ǧabal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).

C 3816 (Dussaud M 342; LP 838)

l ʾṣm{g}

By ʾṣmg

Apparatus Criticus:
C: l ʾṣmʿ

Provenance:
Al-Ḥifnah, Al-Suwaydah, Syria
[Latitude/Longitude: 32.76784 / 37.00326]
Al-Ḥifnah is at a point at which Wādī al-Shām becomes a wide gorge, and the site of al-Ḥifna runs downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Muʾazzin, Nehmé 1996. Littmann wrote "Al-Ḥifnah is a water-place in the Wādī al-Shām, between the Ḥawrān mountains [Ǧabal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain

water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).

C 3827 (Dussaud M 351 c; LP 110)

l kdr bn ṭ{ḥ}(r)(t)

By Kdr son of Ṭḥrt

Provenance:
Al-Ḥifnah, Al-Suwaydah, Syria
[Latitude/Longitude: 32.76784 / 37.00326]
Al-Ḥifnah is at a point at which Wādī al-Shām becomes a wide gorge, and the site of al-Ḥifna runs downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Muʾazzin, Nehmé 1996. Littmann wrote "Al-Ḥifnah is a water-place in the Wādī al-Shām, between the Ḥawrān mountains [Ǧabal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).
