

Figure S1: A railroad syntax diagram for PGLang. Any path connecting the starting point at the top left to the ending point in the bottom right — including any loops or skipped sections — describes a syntactically legal PGLang structure. Note, however, that not every syntactically valid structure is semantically valid (i.e. it's possible to describe structures in PGLang that are chemically impossible, but those errors will be caught during a subsequent validation step). Lowercase letters are all ASCII characters 'a'–'z', and uppercase letters are all characters 'A'–'Z'; the "letters" character set is a combination of the two. Digits are ASCII '0'–'9', and positions are '1'–'5'.

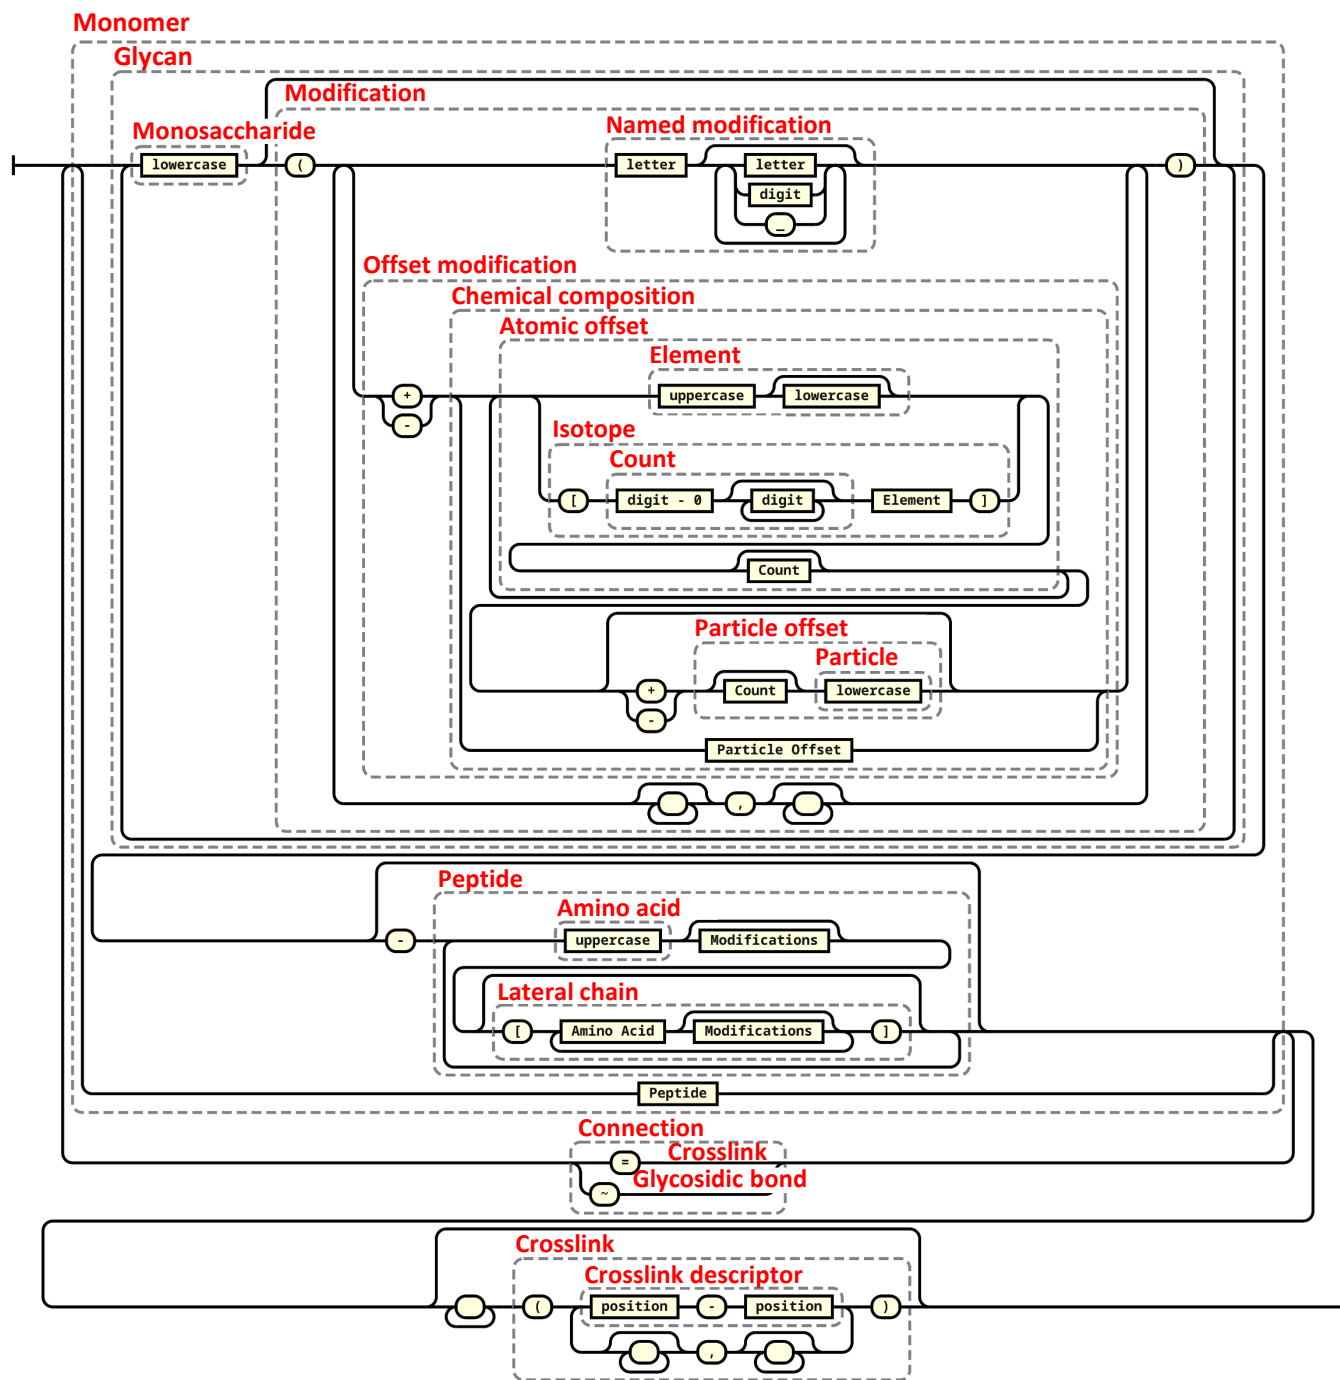

Figure S2. Monomers identified by MS/MS in TY samples using Byonic™ software.

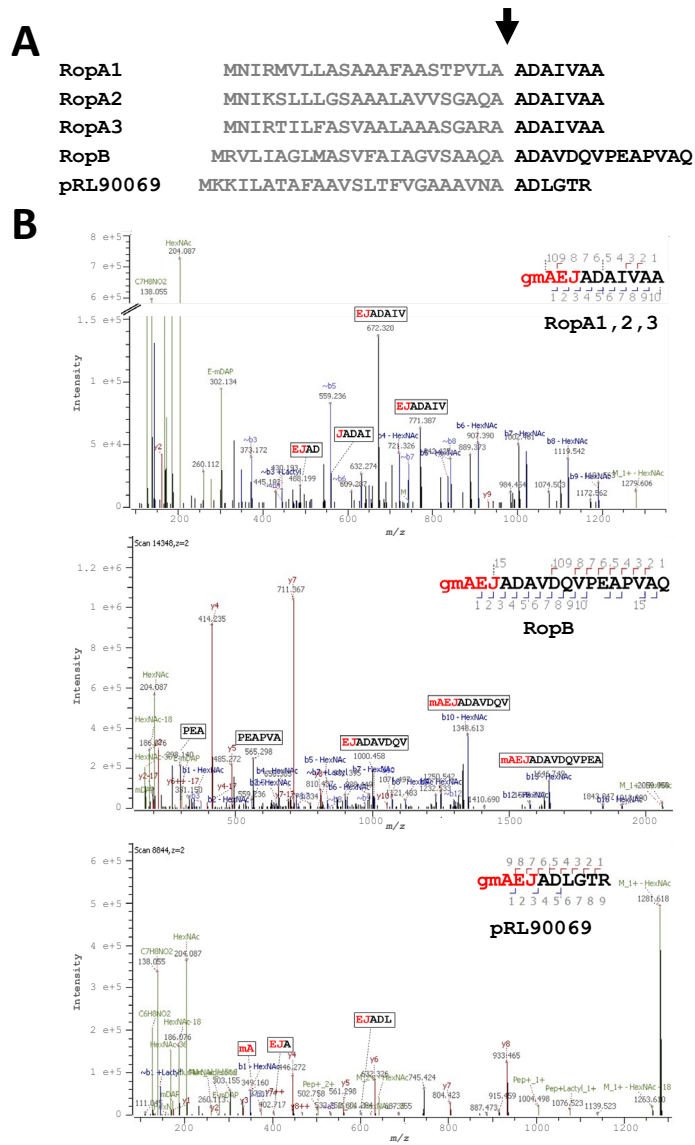

Figure S5. The existence of β -barrel anchoring scars can be confirmed via MS/MS. (A) N-terminal sequences of five putative peptidoglycan-anchored β -barrel proteins; the arrow shows the predicted signal peptide cleavage site. **(B)** Example MS/MS spectra confirm the N-terminal anchoring of these β -barrel proteins. Ions corresponding to internal fragments that were manually annotated are boxed.

Table S1: Residues built into PGFinder.

N	Asparagine	C ₄ H ₈ N ₂ O ₃	132.053492
O	Ornithine	C ₅ H ₁₂ N ₂ O ₂	132.089878
P	Proline	C ₅ H ₉ NO ₂	115.063329
Q	Glutamine	C ₅ H ₁₀ N ₂ O ₃	146.069142
R	Arginine	C ₆ H ₁₄ N ₄ O ₂	174.111676
S	Serine	C ₃ H ₇ NO ₃	105.042593
T	Threonine	C ₄ H ₉ NO ₃	119.058243
U	Homoserine	C ₄ H ₉ NO ₃	119.058243
V	Valine	C ₅ H ₁₁ NO ₂	117.078979
W	Tryptophan	C ₁₁ H ₁₂ N ₂ O ₂	204.089878
X	Unknown Amino Acid		0
Y	Tyrosine	C ₉ H ₁₁ NO ₃	181.073893
Z	Threo-3-Hydroxyglutamic	C ₅ H ₉ NO ₅	163.048072

Both “x” and “X” can be used as wild-cards with the PGLang offset syntax — e.g. “X(+C5H12N4O3)”.

Table S2: Modifications built into PGFinder.

Symbol	Name	Lost Atoms	Gained Atoms	Net Monoisotopic Mass	Targeted Functional Groups
Ac	<i>O</i> -Acetylation	H	C ₂ H ₃ O	42.010565	"Hydroxyl" at="6-Position"
Am	Amidation	OH	NH ₂	-0.984016	"Carboxyl" at="Sidechain"
Anh	1,6-Anhydro	H ₂ O	-	-18.010565	"Hydroxyl" at="Reducing End" of="N-Acetylmuramic Acid"
DeAc	De- <i>N</i> -Acetylation	C ₂ H ₃ O	H	-42.010565	"Acetyl" at="Secondary Amide"
Glyc	Glycolylation	CH ₃	CH ₂ OH	15.994915	"Acetyl" at="Secondary Amide" of="N-Acetylmuramic Acid"
Poly	Wall Polymer Linkage	H	PO ₃	77.950681	"Hydroxyl" at="6-Position"
Red	Reduced	-	H ₂	2.015650	"Hydroxyl" at="Reducing End"

Note that specific modifications can only target specific residues / functional groups. The groups each modification targets are described in the last column.
