

The graph displays the current-voltage (I-V) characteristics of a device over six successive scans. The x-axis represents Voltage [V] from 2.00 to 4.00, and the y-axis represents current in nA from 0 to 100. The curves show a transition from a high-current state at low voltages to a low-current state at high voltages. Scan 0 shows the highest current, while Scan 5 shows the lowest current, indicating a gradual decrease in current over time.
