

SUPPLEMENTARY FIGURE LEGENDS

Figure 1. Soil dry bulk density (g.cm^{-3}) for each block in the stocking regime management units **a)** historically grazed by cattle and receiving the cattle-only (CC) and cattle to mixed sheep and cattle (CM) treatments, and **b)** historically grazed by sheep and receiving the sheep-only (SS) and sheep to mixed sheep and cattle (SM) treatments. Bar height indicates the mean bulk density in each block, error bars represent the standard error of the mean, and shading indicates baseline (June) and endline (September) measurements.

Figure 2. Soil dry bulk density (g.cm^{-3}) under the grazed (_G) and ungrazed (_U) treatments in the grazing regime management units. Bar height indicates the mean bulk density in each block, error bars represent the standard error of the mean, and shading indicates baseline (June) and endline (September) measurements.
