

Supplementary Information (SI)

Table of Contents

1. Sociodemographic and polysomnographic characteristics

1.1 Sociodemographic and sleep architecture measures – Table S1

2. General pipeline and SO-power histograms

2.1 Group-averaged SO-power histograms and arithmetic differences

- NREM+REM sleep stages together – Figures S1
- NREM-only and REM-only sleep stages – Figures S2–S4

2.2 Statistically significant SO-power patterns

• PCA/ICA components and pattern maps (Pow1–Pow9) – Figures S5-1–S5-4 (collectively Figure S5)

2.3 Summary of SO-power statistical tests

- NREM+REM sleep stages together – Tables S2–S8
- NREM-only sleep stages – Tables S9–S13
- REM-only sleep stage – Tables S14–S16

3. SO-phase histograms

3.1 Group-averaged SO-phase histograms and arithmetic differences

- NREM+REM sleep stages together, NREM-only sleep, and REM-only sleep – Figures S6–S9

3.2 Statistically significant SO-phase patterns

- PCA/ICA components and pattern maps (Pha1–Pha7) – Figure S10

3.3 Pattern-level summary of SO-phase differences

- Overview of significant patterns across channels and groups – Figure S11

3.4 Summary of SO-phase statistical tests

- NREM+REM sleep stages together – Tables S17–S23
- NREM-only sleep stages – Tables S24–S28

4. Split-half reliability

• Split-half correlation matrices for SO-power and SO-phase PCA eigenvectors – Figures S12–S13

5. Predictive modelling

- ROC curves illustrating group-level discrimination – Figures S14–S15
- Permutation tests for classifier performance – Figures S16–S17

6. Global summaries of significant components

- SO-power components: counts per group and stage – Figure S18
- SO-phase components: counts per group and stage – Figure S19

Table S1. Sociodemographic and polysomnographic characteristics

Variable	Control		NREMP		NT1		iRBD		FM		χ^2	p

Notes. The table depicts results of statistical tests for Control (n=39) versus the combined patient group (NREMP n=16, NT n=16, iRBD n=17, FM n=11). The Pearson χ^2 test was utilized for categorical variables, and the Mann-Whitney test was employed for ordinary variables.

Abbreviations: AHI, apnea-hypopnea index; AI, arousal index; DF, degrees of freedom; FM, fibromyalgia; IQR, interquartile range; min, minutes; n, number; N1, N2, N3, non-rapid eye movement sleep stages 1,2,3; NREMP, non-REM parasomnia; NT1, narcolepsy type 1; p, p-value; iRBD, idiopathic REM behavior disorder; REM, rapid eye movement sleep; SD, standard deviation; SE, sleep efficiency; SL, sleep latency; SOT, sleep onset time; Total N, total number of subjects in 5 groups; TST, total sleep time; U, Mann-Whitney test statistics; WASO, wake after sleep onset; χ^2 , chi squared statistics; %, percent.

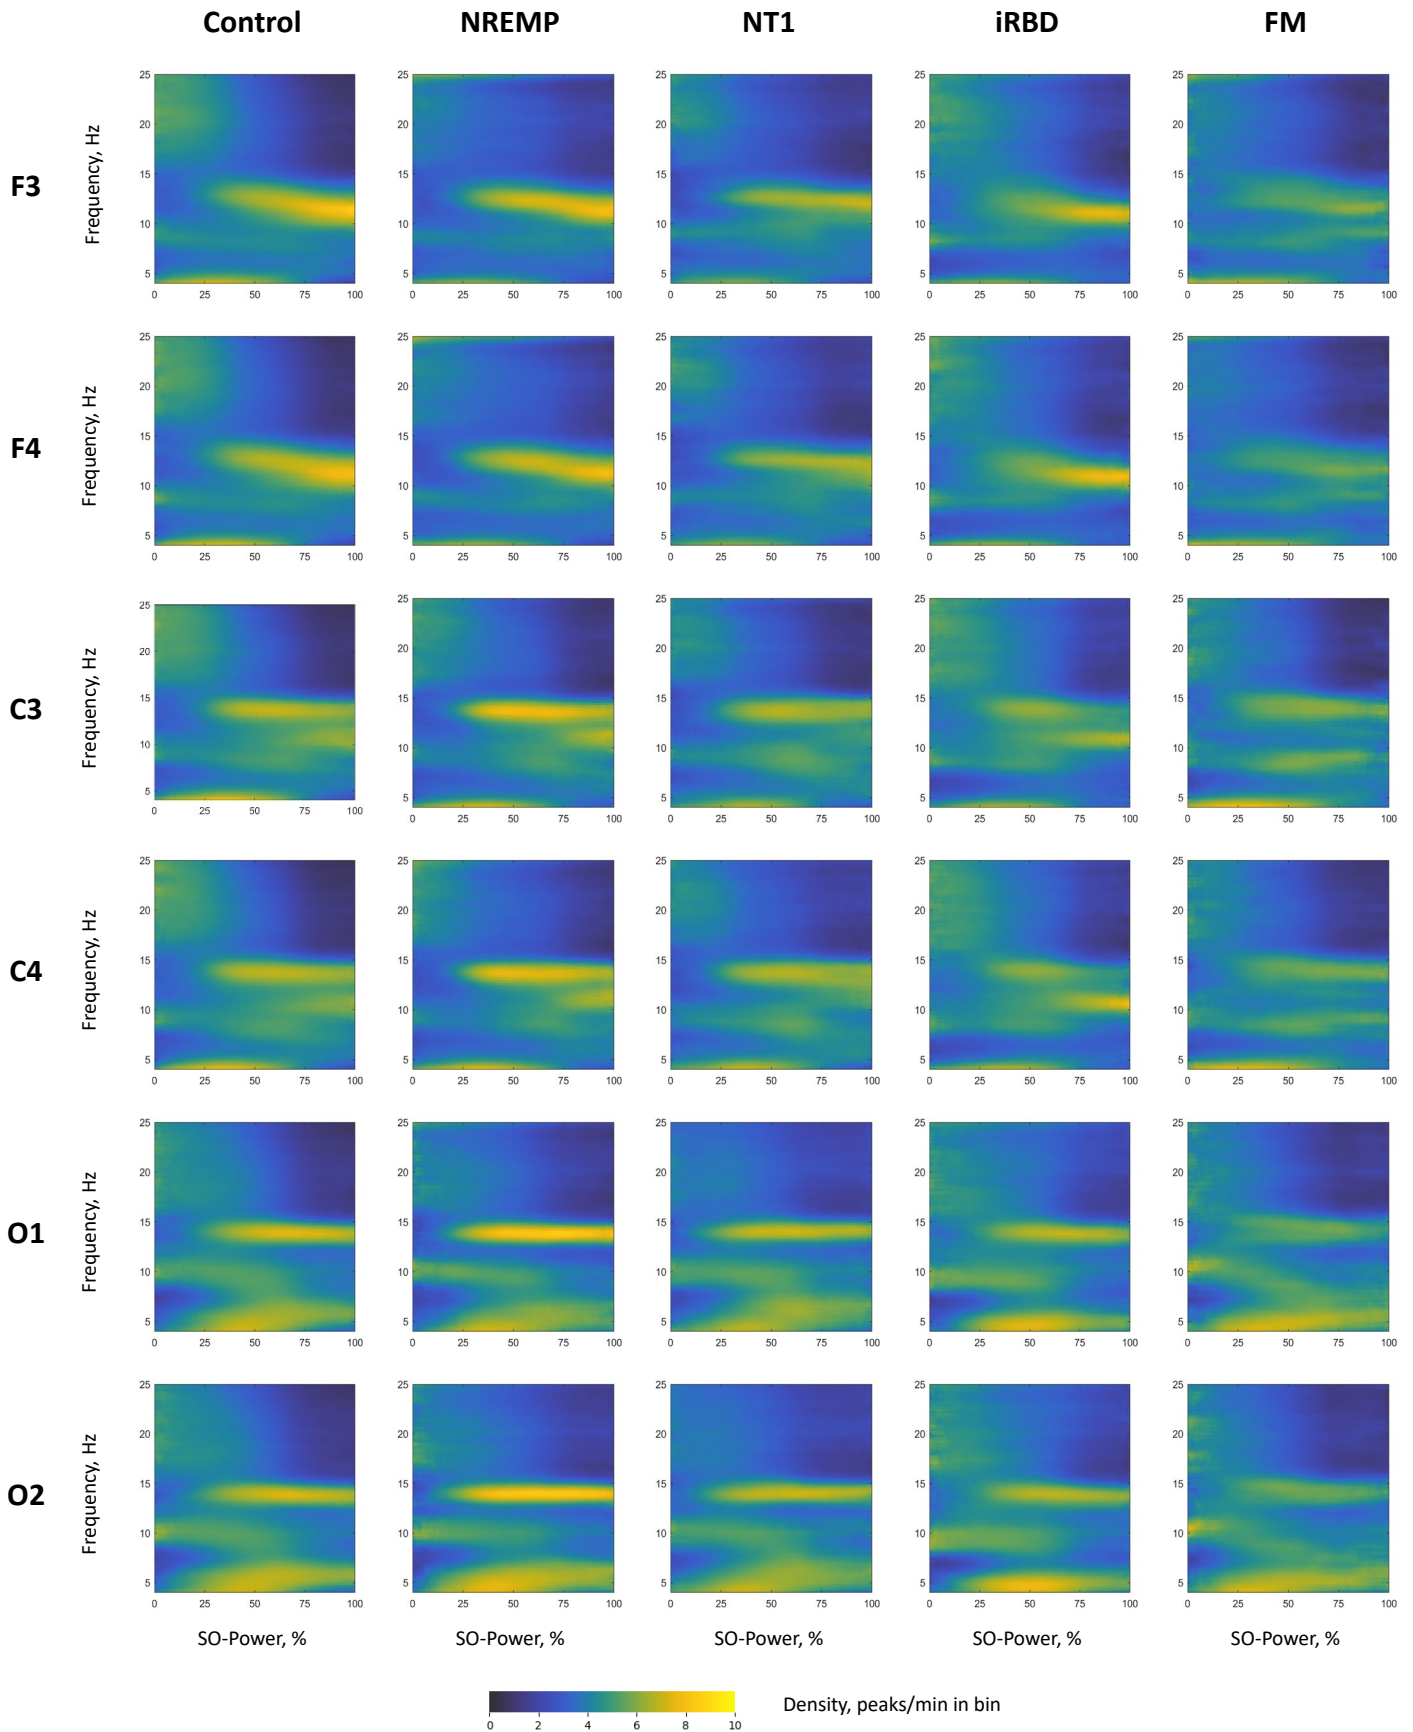

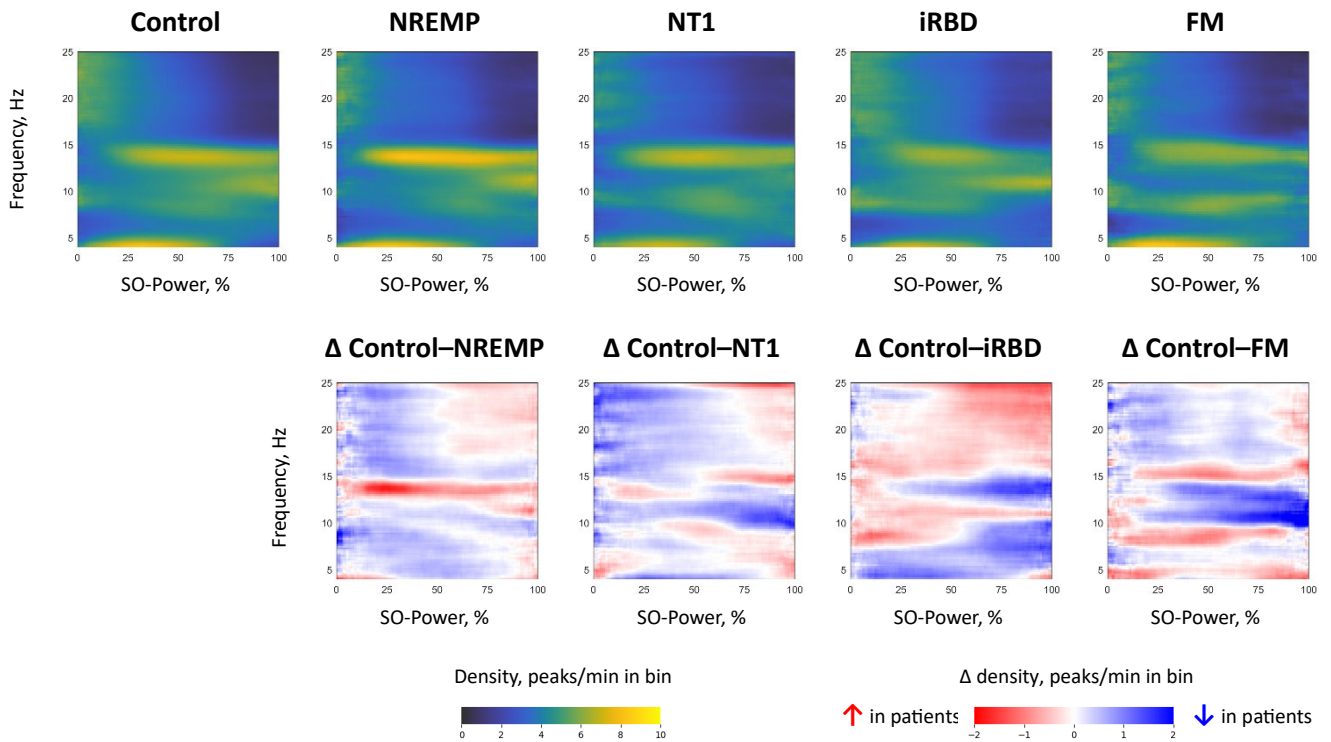

Fig S1. Group average SO-power histograms for NREM + REM sleep stages together. Please refer to **Table S1** for detailed information about the groups.

Abbreviations: [C3, C4, F3, F4, O1, O2], channels' codes in the standard 10-20% electroencephalography montage; **FM**, fibromyalgia; **NREM**, non-rapid eye movement stages; **NREMP**, non-REM parasomnia; **NT1**, narcolepsy type 1; **iRBD**, rapid eye movement sleep behavior disorder; **REM**, rapid eye movement stage, **SO**, slow oscillations; **%**, percent.

A NREM stages only, SO-power histograms, channel C3

B REM stage only, SO-power histograms, channel C3

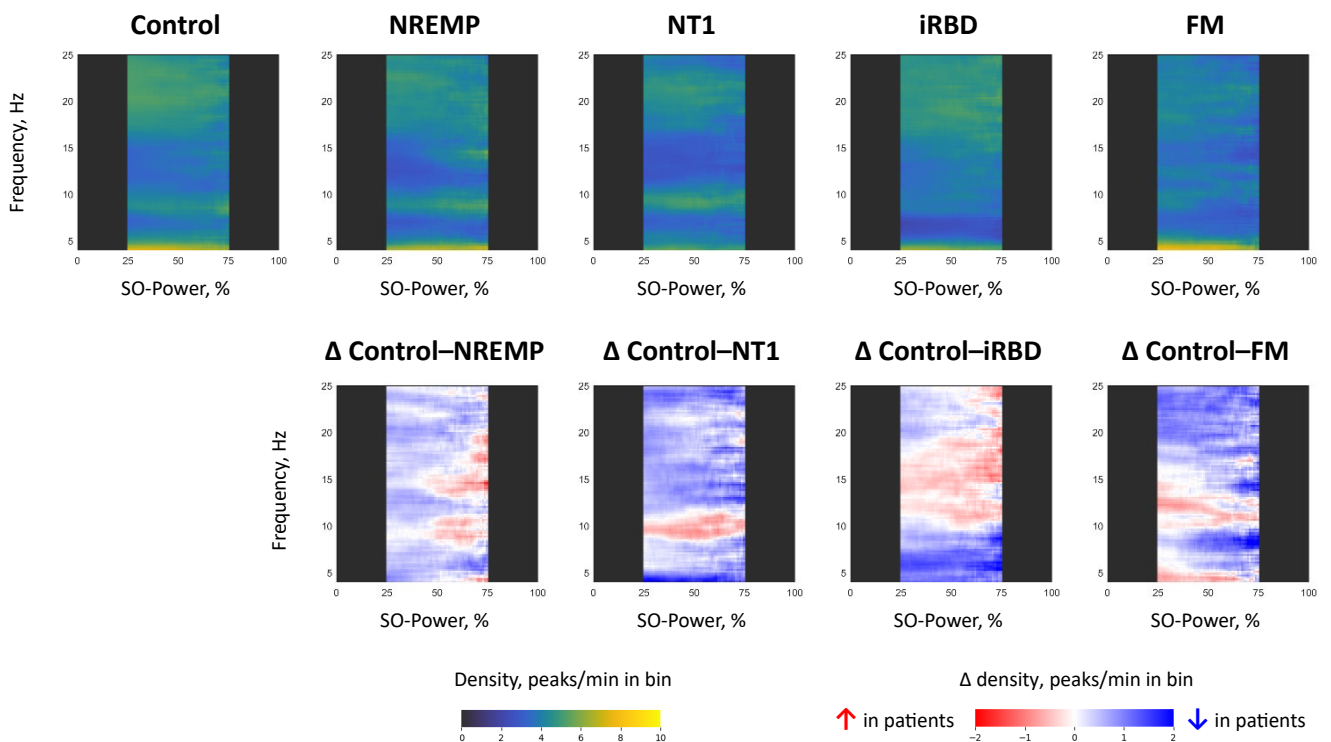

Fig. S2. SO-power histograms for NREM only sleep and REM only sleep stages (A and B, respectively) at channel C3. In each panel, the upper row of histograms illustrate group average, while the lower row shows arithmetical differences between histogram matrices. For REM histograms, only the diapason of 25-75% SO power was considered due to inconsistency in other diapasons (please see **Materials and Methods** section). Please see **Figure 2** for SO-power histograms at NREM+REM stages together and **Table S1** for detailed information about the groups.

Abbreviations: C3, channels' codes in the standard 10-20% electroencephalography montage; FM, fibromyalgia; Hz, hertz; min, minute; NREM, non-rapid eye movement stages; NREMP, non-REM parasomnia; NT1, narcolepsy type 1; iRBD, idiopathic/isolated rapid eye movement sleep behavior disorder; REM, rapid eye movement sleep stage; SO, slow oscillations; %, percent.

Fig. S3. Group average SO-power histograms for NREM sleep stages only. Please see **Table S1** for detailed information about the groups.

Abbreviations: [C3, C4, F3, F4, O1, O2], channels' codes in the standard 10-20% electroencephalography montage; FM, fibromyalgia; NREM, non-rapid eye movement stages; NREMP, non-REM parasomnia; NT1, narcolepsy type 1; iRBD, idiopathic/isolated rapid eye movement sleep behavior disorder; SO, slow oscillations; %, percent.

Fig. S4. Group average SO-power histograms for REM sleep stages only. Please see **Table S1** for detailed information about the groups.

Abbreviations: [C3, C4, F3, F4, O1, O2], channels' codes in the standard 10-20% electroencephalography montage; **FM**, fibromyalgia; **NREMP**, non-REM parasomnia; **NT1**, narcolepsy type 1; **iRBD**, idiopathic/isolated rapid eye movement sleep behavior disorder; **REM**, rapid eye movement stage; **SO**, slow oscillations; **%**, percent.

Patterns of PCA/ICA components with significant differences between Control and patients, part 1 of 4

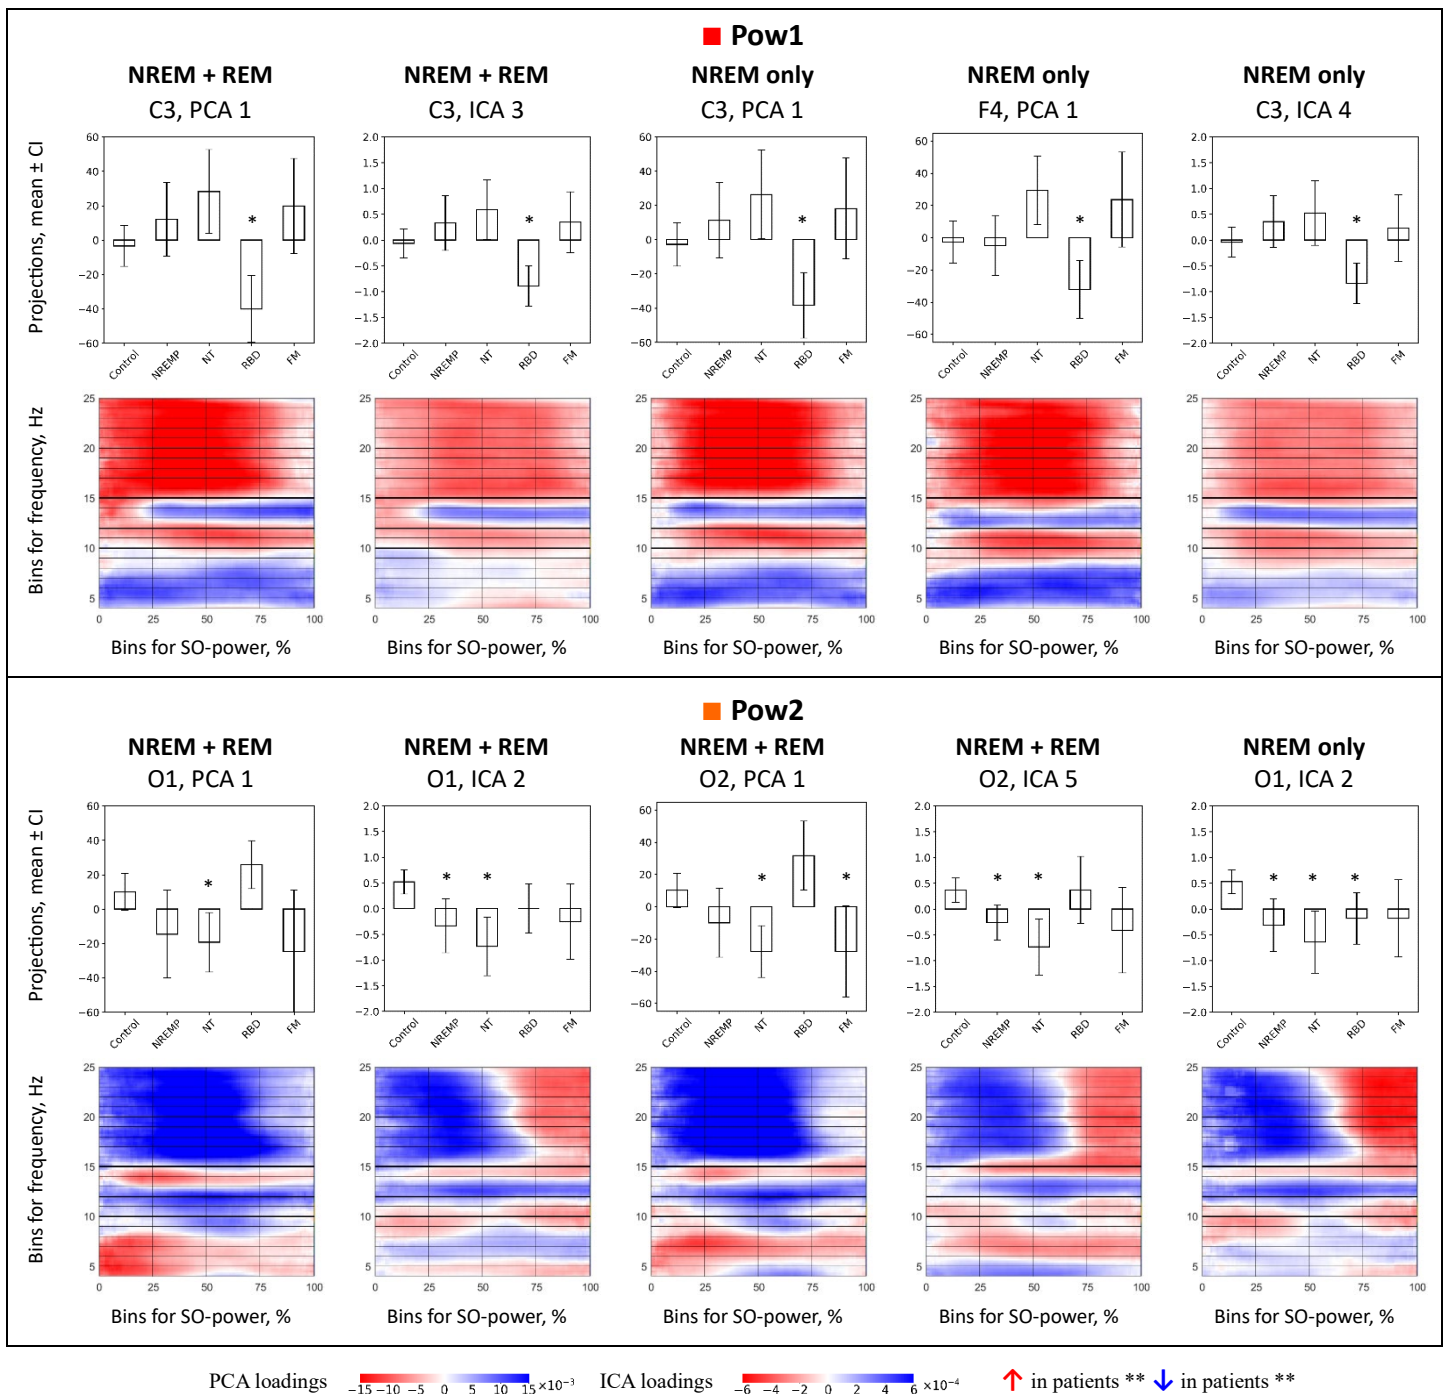

Fig. S5-1. SO-power histograms: PCA and ICA components that were associated with significant differences between groups (pairwise comparisons of Control versus each of the patient groups, $p \leq .05$ Bonferroni adjusted). Grid lines indicate frequency bands (1 Hz resolution) and SO-power quartiles. Thick lines mark bands of slow 10-12 Hz and fast 12-15 Hz sigma. Component histograms were classified into categories Pow1-Pow9 based on the visual similarity of the depicted patterns. Please refer to **Figure 3**, **Tables S2-S16**, and **Table S1** for summary of between-group differences, detailed statistics, and information about the groups, respectively.

* denotes statistically significant Bonferroni-corrected p-values, $p \leq .05$.

** red (increase) and blue (decrease) colors indicate these changes in patient groups with significant differences versus Control; all the patterns are oriented in such a way as to unify the interpretation approaches.

Abbreviations: [C3, C4, F3, F4, O1, O2], channel's code in the standard 10-20% electroencephalography montage; CI, confidence intervals; Hz, hertz; FM, fibromyalgia; ICA, independent component analysis; ICA x, ICA component x; NREM, non-rapid eye movement stages; NREMP, non-REM parasomnia; NT1, narcolepsy; p, p-value; PCA, principal component analysis; PCA x, PCA component x; Pow1-Pow9, SO-power patterns 1-9; iRBD, idiopathic/isolated rapid eye movement sleep behavior disorder; REM, rapid eye movement sleep stage SO, slow oscillations; %, percent.

Patterns of PCA/ICA components with significant differences between Control and patients, part 2 of 4

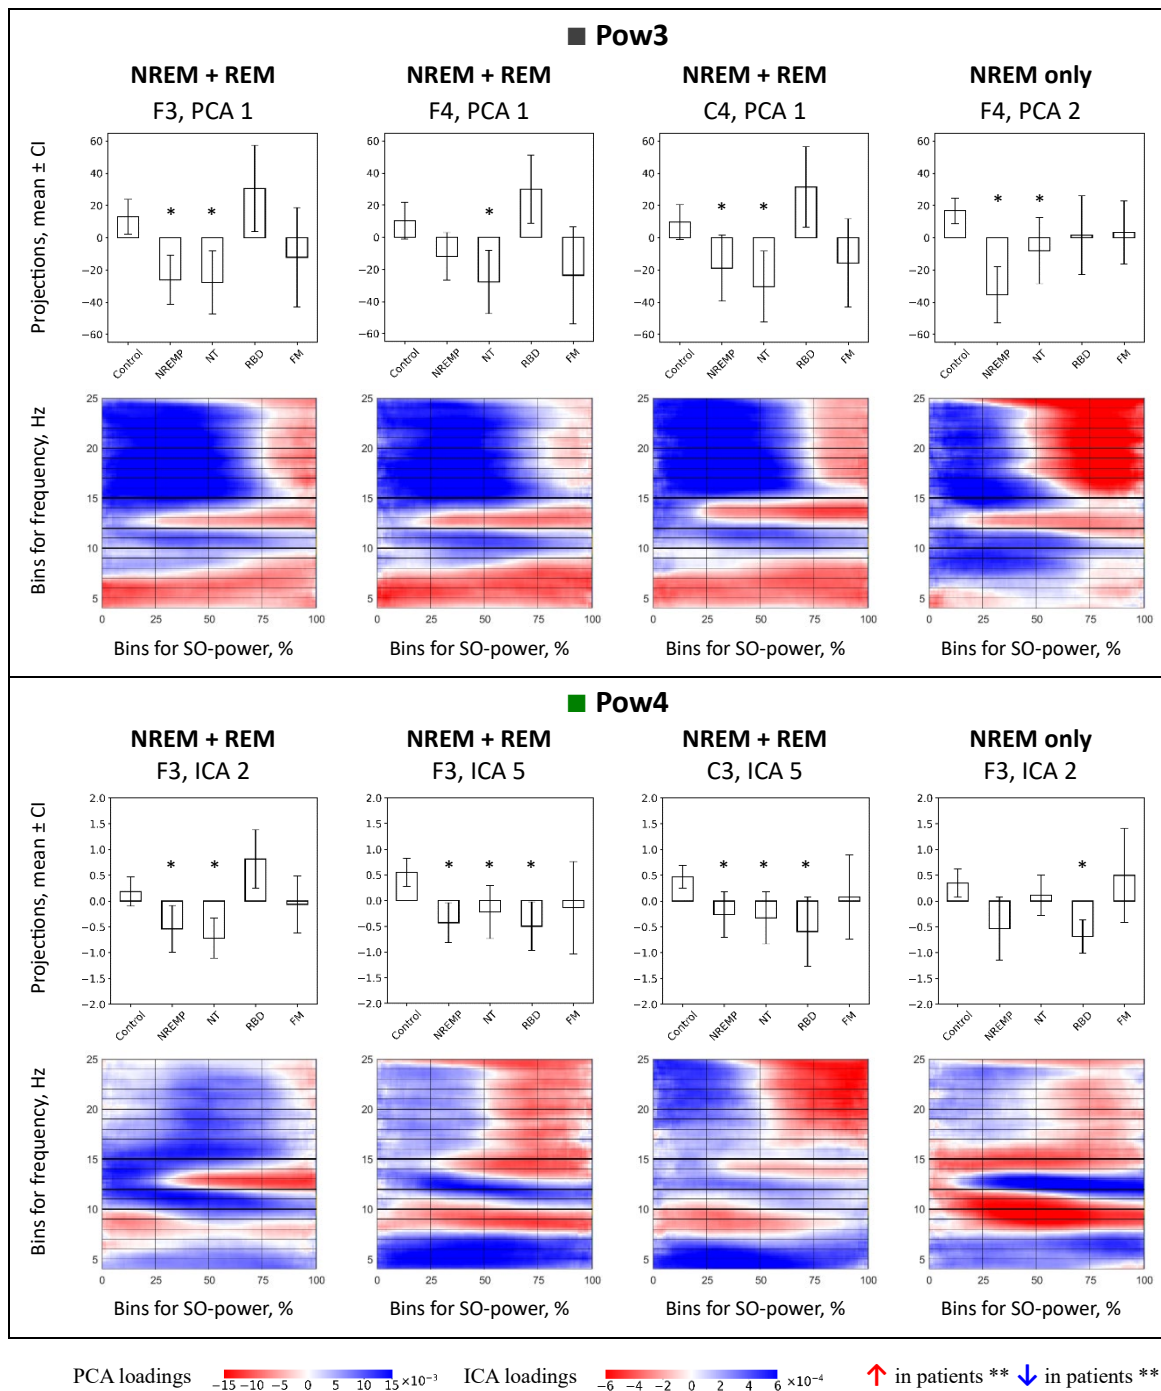

Fig. S5-2. SO-power histograms: PCA and ICA components that were associated with significant differences between groups (pairwise comparisons of Control versus each of the patient groups, $p \leq .05$ Bonferroni adjusted). Grid lines indicate frequency bands (1 Hz resolution) and SO-power quartiles. Thick lines mark bands of slow 10-12 Hz and fast 12-15 Hz sigma.

Component histograms were classified into categories Pow1-Pow9 based on the visual similarity of the depicted patterns. Please refer **Figure 3, Tables S2-S16, and Table S1** for summary of between-group differences, detailed statistics, and information about the groups, respectively.

* denotes statistically significant Bonferroni-corrected p-values, $p \leq .05$.

** red (increase) and blue (decrease) colors indicate these changes in patient groups with significant differences versus Control; all the patterns are oriented in such a way as to unify the interpretation approaches.

Abbreviations: [C3, C4, F3, F4, O1, O2], channel's code in the standard 10-20% electroencephalography montage; CI, confidence intervals; Hz, hertz; FM, fibromyalgia; ICA, independent component analysis; ICA x, ICA component x; NREM, non-rapid eye movement stages; NREMP, non-REM parasomnia; NT1, narcolepsy type 1; p, p-value; PCA, principal component analysis; PCA x, PCA component x; Pow1-Pow9, SO-power patterns 1-9; iRBD, idiopathic/isolated rapid eye movement sleep behavior disorder; REM, rapid eye movement sleep stage SO, slow oscillations; %, percent.

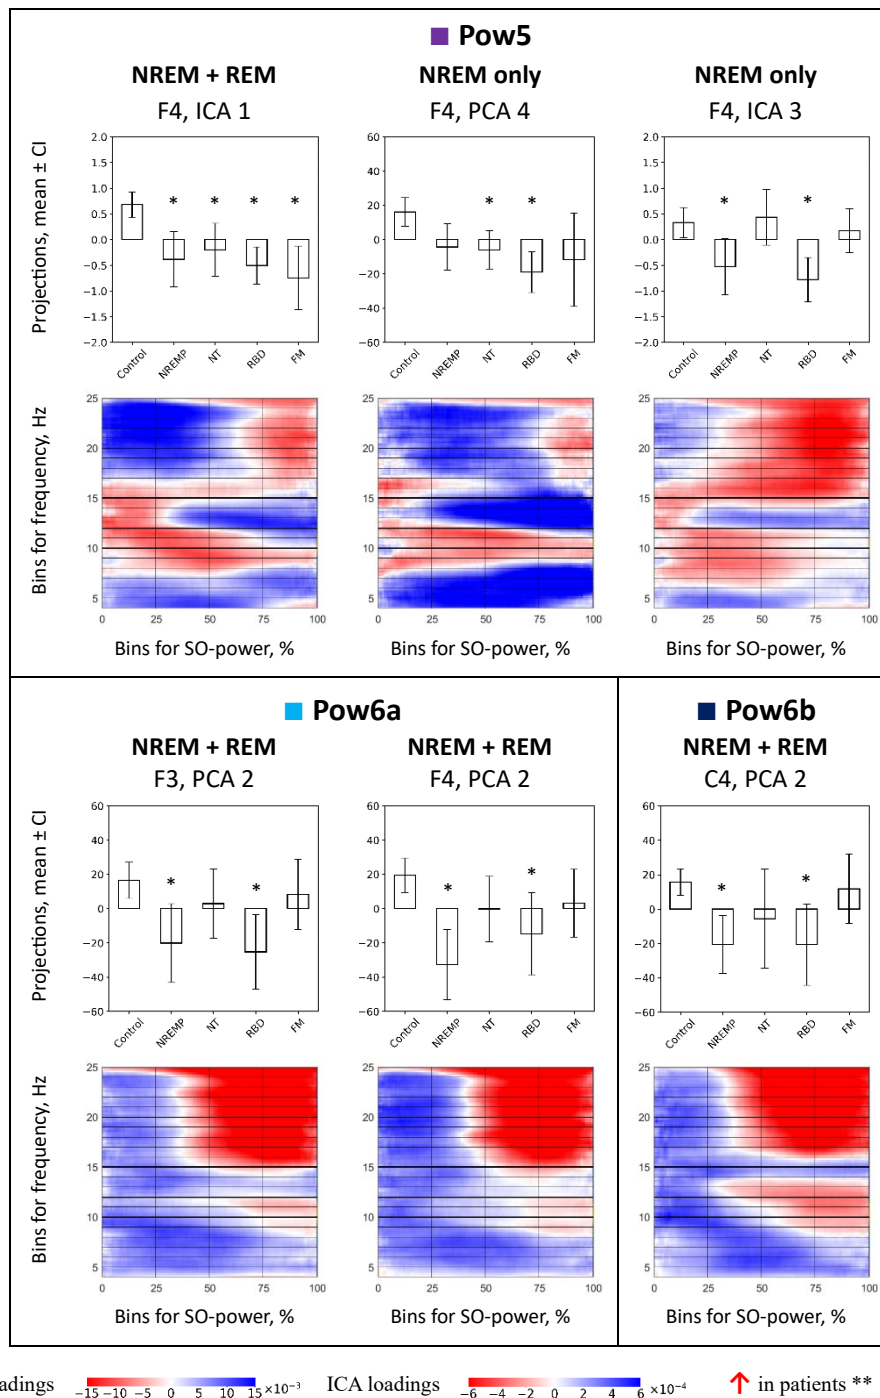

Fig. S5-3. SO-power histograms: PCA and ICA components that were associated with significant differences between groups (pairwise comparisons of Control versus each of the patient groups, $p \leq .05$ Bonferroni adjusted). Grid lines indicate frequency bands (1 Hz resolution) and SO-power quartiles. Thick lines mark bands of slow 10-12 Hz and fast 12-15 Hz sigma. Component histograms were classified into categories Pow1-Pow9 based on the visual similarity of the depicted patterns. Please refer to **Figure 3**, **Tables S2-S16**, and **Table S1** for summary of between-group differences, detailed statistics, and information about the groups, respectively.

* denotes statistically significant Bonferroni-corrected p-values, $p \leq .05$.

** red (increase) and blue (decrease) colors indicate these changes in patient groups with significant differences versus Control; all the patterns are oriented in such a way as to unify the interpretation approaches.

Abbreviations: [C3, C4, F3, F4, O1, O2], channel's code in the standard 10-20% electroencephalography montage; CI, confidence intervals; Hz, hertz; FM, fibromyalgia; ICA, independent component analysis; ICA x, ICA component x; NREM, non-rapid eye movement stages; NREMP, non-REM parasomnia; NT1, narcolepsy type 1; p, p-value; PCA, principal component analysis; PCA x, PCA component x; Pow1-Pow9, SO-power patterns 1-9; iRBD, idiopathic/isolated rapid eye movement sleep behavior disorder; REM, rapid eye movement sleep stage SO, slow oscillations; %, percent.

Patterns of PCA/ICA components with significant differences between Control and patients, part 4 of 4

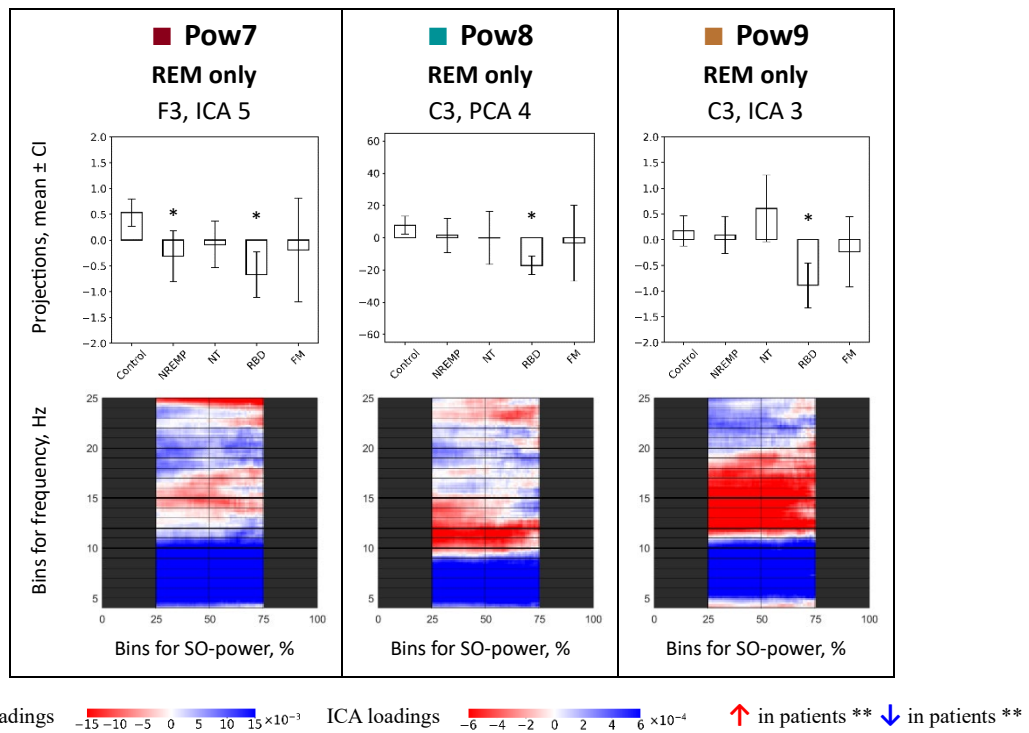

Figure S5-4. SO-power histograms: PCA and ICA components that were associated with significant differences between groups (pairwise comparisons of Control versus each of the patient groups, $p \leq .05$ Bonferroni adjusted). Grid lines indicate frequency bands (1 Hz resolution) and SO-power quartiles. Thick lines mark bands of slow 10-12 Hz and fast 12-15 Hz sigma. Component histograms were classified into categories Pow1-Pow9 based on the visual similarity of the depicted patterns. Please refer to **Figure 3**, **Tables S2-S16**, and **Table S1** for summary of between-group differences, detailed statistics, and information about the groups, respectively.

* denotes statistically significant Bonferroni-corrected p-values, $p \leq .05$.

** red (increase) and blue (decrease) colors indicate these changes in patient groups with significant differences versus Control; all the patterns are oriented in such a way as to unify the interpretation approaches.

Abbreviations: [C3, C4, F3, F4, O1, O2], channel's code in the standard 10-20% electroencephalography montage; CI, confidence intervals; Hz, hertz; FM, fibromyalgia; ICA, independent component analysis; ICA x, ICA component x; NREM, non-rapid eye movement stages; NREMP, non-REM parasomnia; NT1, narcolepsy type 1; p, p-value; PCA, principal component analysis; PCA x, PCA component x; Pow1-Pow9, SO-power patterns 1-9; iRBD, idiopathic/isolated rapid eye movement sleep behavior disorder; REM, rapid eye movement sleep stage SO, slow oscillations; %, percent.

Table S2. Summary of Kruskal–Wallis test between five groups (PCA and ICA components of SO-power histogram datasets; NREM + REM sleep stages together; components with significant differences only)

Notes: pairwise comparisons were performed only for PCA/ICA components for those with significant differences adjusted in the Kruskal–Wallis test between all 5 groups together (Table S2).

* (in bold) denotes statistically significant differences for adjusted p-values after the Bonferroni correction, $p \leq .05$. Please refer to Table S1 for detailed information about the groups.

Abbreviations: adj p, Bonferroni-adjusted p-value; F4, channel’s code in the standard 10-20% electroencephalography montage; FM, fibromyalgia; ICA, independent component analysis; NREM, non-rapid eye movement stages; NREMP, non-REM parasomnia; NT1, narcolepsy type 1; p, p-value; PCA, principal component analysis; iRBD, idiopathic/isolated rapid eye movement sleep behavior disorder; REM, rapid eye movement sleep stage; SE, standard error of mean; SO, slow oscillations; U, Mann–Whitney U test statistics; z, z-score; η^2 , effect size; 95% CI lower/upper, 95% confidence interval lower/upper.

Table S5. Summary of the two-tailed Mann–Whitney pairwise tests between Control group and each of patients’ groups (NREM + REM sleep stages together, channel C3, PCA and ICA projections of SO-power histogram datasets)

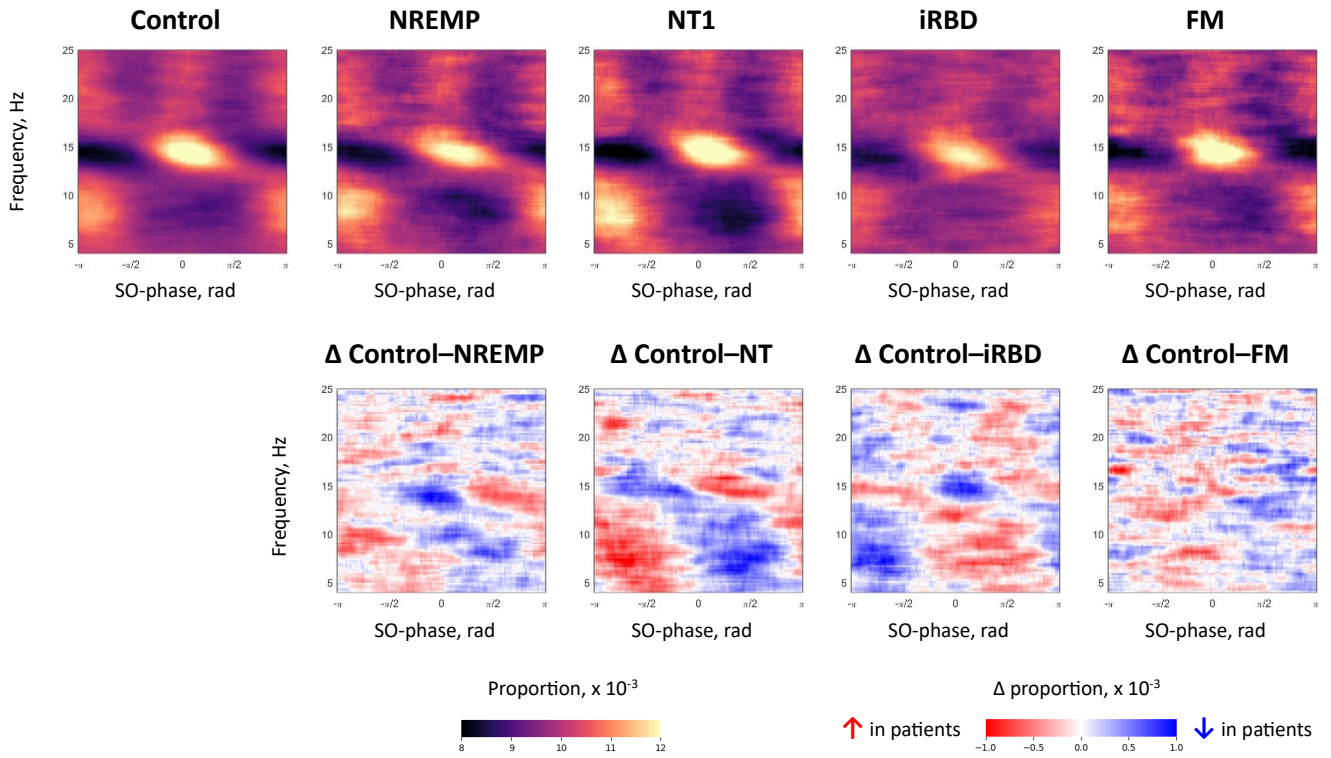

Fig. S6. Group average SO-phase histograms for NREM + REM stages together. Please see **Table S1** for detailed information about the groups.

Abbreviations: [C3, C4, F3, F4, O1, O2], channels' codes in the standard 10-20% electroencephalography montage; FM, fibromyalgia; NREM, non-rapid eye movement stages; NREMP, non-REM parasomnia; NT1, narcolepsy type 1; rad, radian; iRBD, idiopathic/isolated rapid eye movement sleep behavior disorder; REM, rapid eye movement stage, SO, slow oscillations.

A NREM sleep stages only, SO-phase histograms, channel C3

B REM stages only, SO-phase histograms, channel C3

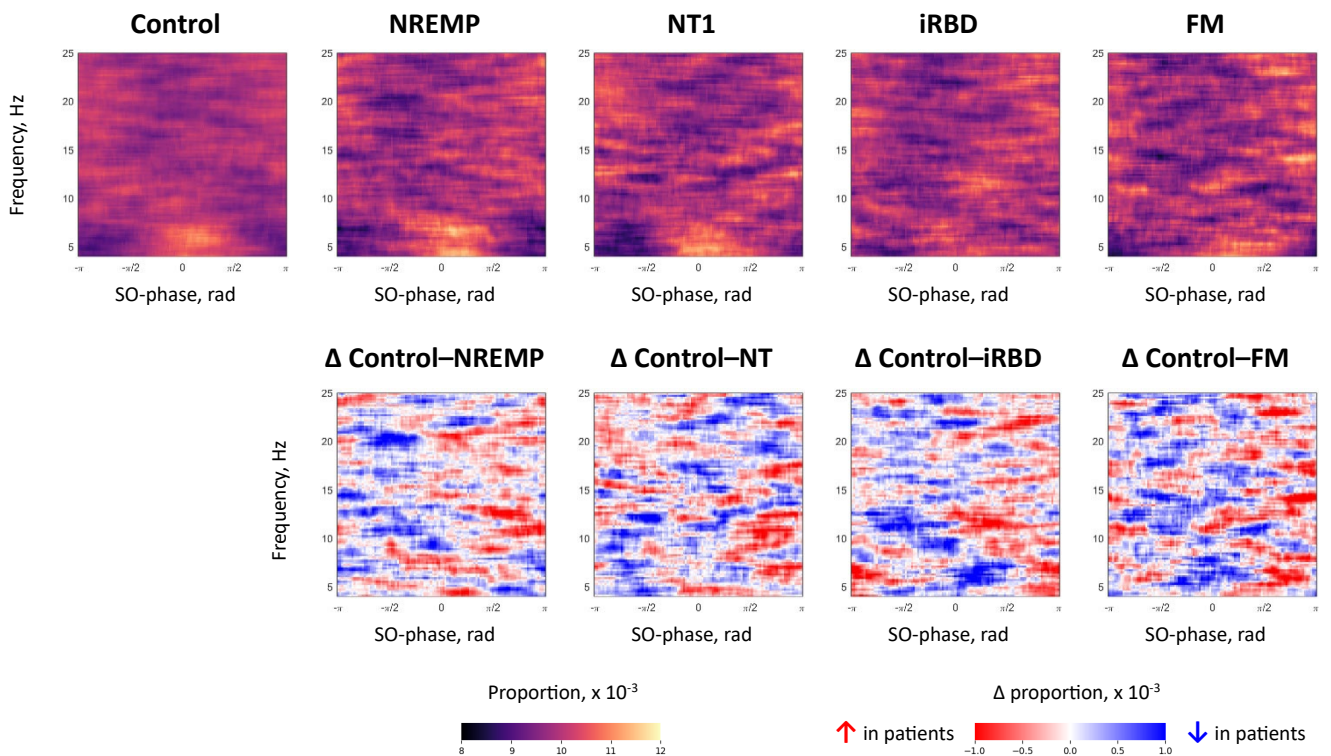

Fig. S7. SO-phase histograms for NREM sleep only and REM only sleep stages (A and B, respectively) at channel C3. In each panel, the upper row of histograms illustrate group average, while the lower row shows arithmetical differences between histogram matrices. Please see **Figure 2** for SO-phase histograms at NREM+REM stages together and **Table S1** for detailed information about the groups.

Abbreviations: C3, channels' codes in the standard 10-20% electroencephalography montage; FM, fibromyalgia; Hz, hertz; min, minute; NREM, non-rapid eye movement stages; NREMP, non-REM parasomnia; NT1, narcolepsy type 1; rad, radian; iRBD, idiopathic/isolated rapid eye movement sleep behavior disorder; REM, rapid eye movement sleep stage; SO, slow oscillations.

Fig. S8. Group average SO-phase histograms for NREM sleep stages only. Please see **Table S1** for detailed information about the groups.

Abbreviations: [C3, C4, F3, F4, O1, O2], channels' codes in the standard 10-20% electroencephalography montage; FM, fibromyalgia; NREM, non-rapid eye movement stages; NREMP, non-REM parasomnia; NT1, narcolepsy type 1; rad, radian; iRBD, idiopathic/isolated rapid eye movement sleep behavior disorder; SO, slow oscillations.

Fig. S9. Group average SO-phase histograms for REM sleep stage only. Please see **Table S1** for detailed information about the groups.

Abbreviations: [C3, C4, F3, F4, O1, O2], channels' codes in the standard 10-20% electroencephalography montage; FM, fibromyalgia; NREM, non-rapid eye movement stages; NREMP, non-REM parasomnia; NT1, narcolepsy type 1; rad, radian; iRBD, idiopathic/isolated rapid eye movement sleep behavior disorder; REM, rapid eye movement stage, SO, slow oscillations.

Patterns of PCA/ICA components with significant differences between Control and patients

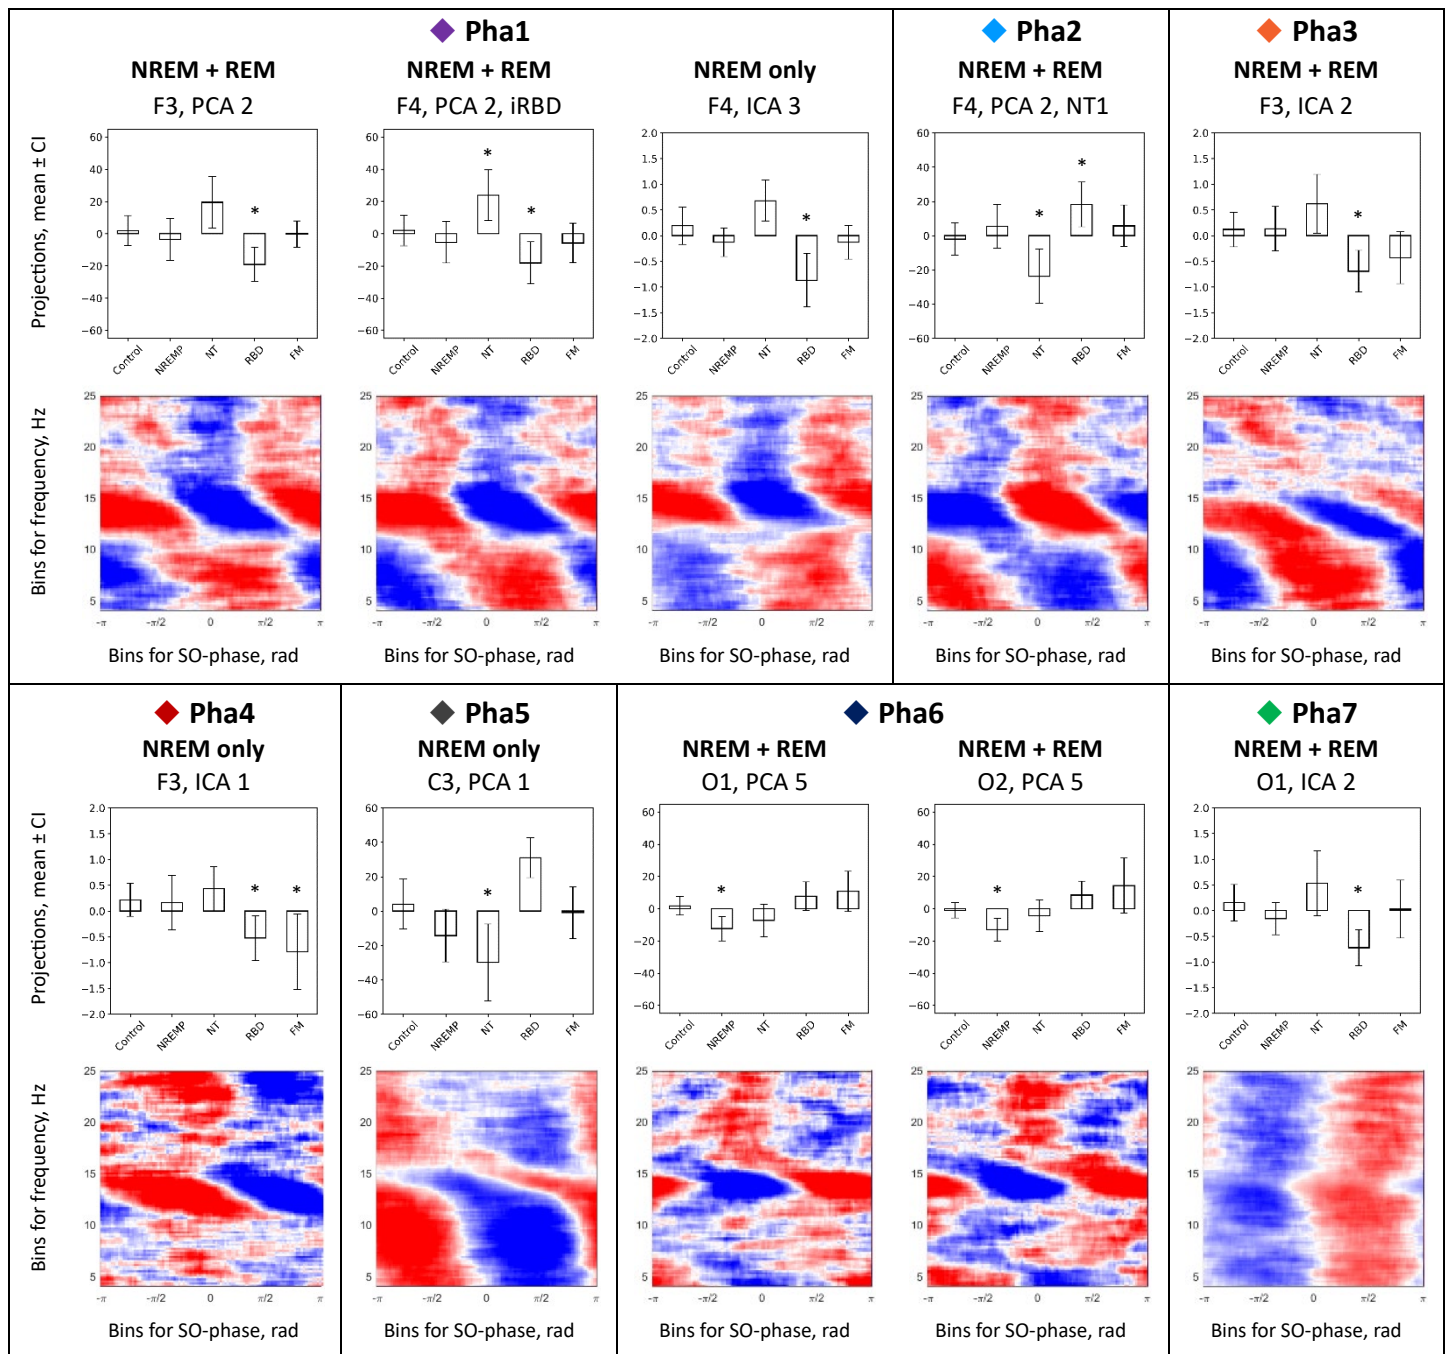

Fig. S10. SO-phase histograms: PCA and ICA components that were associated with significant differences between groups (pairwise comparisons of Control versus each of the patient groups, $p \leq 0.05$ Bonferroni adjusted). There were no significant differences for SO-phase histograms during REM in any case. Component histograms were classified into categories Pha1-Pha7 based on the visual similarity of the depicted patterns. Please refer to **Fig. S11**, **Tables S17-S28**, and **Table S1** for summary of between-group differences, detailed statistics, and information about the groups, respectively.

* denotes statistically significant Bonferroni-corrected p-values, $p \leq .05$.

** red (increase) and blue (decrease) colors indicate these changes in patient groups with significant differences versus Control; all the patterns are oriented in such a way as to unify the interpretation approaches.

Note: Pattern Pha2 F4, PCA 2, NT1 is an inverted version of Pha1 F4, PCA 2, iRBD.

Abbreviations: [C3, C4, F3, F4, O1, O2], channel's code in the standard 10-20% electroencephalography montage; CI, confidence intervals; Hz, hertz; FM, fibromyalgia; ICA, independent component analysis; ICA x, ICA component x; NREM, non-rapid eye movement stages; NREMP, non-REM parasomnia; NT1, narcolepsy type 1; p, p-value; PCA, principal component analysis; PCA x, PCA component x; Pha1-Pha7, SO-phase patterns 1-7; rad, radian; iRBD, idiopathic/isolated rapid eye movement sleep behavior disorder; REM, rapid eye movement sleep stage SO, slow oscillations.

Figure S11. Pattern-level summary of significant SO-phase differences between controls and patient groups. Schematic overview of SO-phase patterns (Pha1–Pha7) showing significant differences between controls and patient groups across channels and stages. Each coloured symbol denotes the presence of at least one PCA or ICA component belonging to the corresponding SO-phase pattern (as defined in Figure S10) that differed significantly between controls and the indicated patient group (Bonferroni-adjusted $p \leq 0.05$) in that channel and stage. Symbols are arranged by sleep stage (NREM+REM sleep, NREM-only sleep) and by left/right hemispheric derivations (F3/F4, C3/C4, O1/O2). The figure is intended as an illustrative, pattern-level map of where phase-coupled TF-peak alterations occur, rather than an exhaustive enumeration of all significant components. A complete quantitative summary of the number of significant SO-phase components per group and stage is provided in Supplementary Figure S19 and in Supplementary Tables S17–S23 (NREM+REM sleep) and S24–S28 (NREM-only sleep).

Abbreviations: [C3, C4, F3, F4, O1, O2], channel’s code in the standard 10-20% electroencephalography montage; **FM**, fibromyalgia; **ICA**, independent component analysis; **NREM**, non-rapid eye movement stages; **NREMP**, non-REM parasomnia; **NT1**, narcolepsy type 1; **p**, p-value; **PCA**, principal component analysis; **Pha1-Pha7**, SO-phase patterns 1-7; **iRBD**, idiopathic/isolated rapid eye movement sleep behavior disorder; **REM**, rapid eye movement sleep stage **SO**, slow oscillations.

Table S17. Summary of Kruskal–Wallis test between five groups (PCA and ICA components of SO-phase histogram datasets; NREM + REM sleep stages together; components with significant differences only)

Channel	Component	Total N	H	DF	η^2	p	α

* (in bold) denotes statistically significant differences for adjusted p-values after the Bonferroni correction, $p \leq .05$. Please refer to **Table S1** for detailed information about the groups.

Abbreviations: **adj p**, Bonferroni-adjusted p-value; **C4**, channel's code in the standard 10-20% electroencephalography montage; **FM**, fibromyalgia; **ICA**, independent component analysis; **NREM**, non-rapid eye movement stages; **NREMP**, non-REM parasomnia; **NT1**, narcolepsy type 1; **p**, p-value; **PCA**, principal component analysis; **iRBD**, idiopathic/isolated rapid eye movement sleep behavior disorder; **REM**, rapid eye movement sleep stage; **SE**, standard error of mean; **SO**, slow oscillations; **U**, Mann–Whitney U test statistics; **z**, z-score; **η^2** , effect size; **95% CI lower/upper**, 95% confidence interval lower/upper.

Split-half reliability correlation matrices (SO-power histogram datasets, NREM + REM sleep stages together)

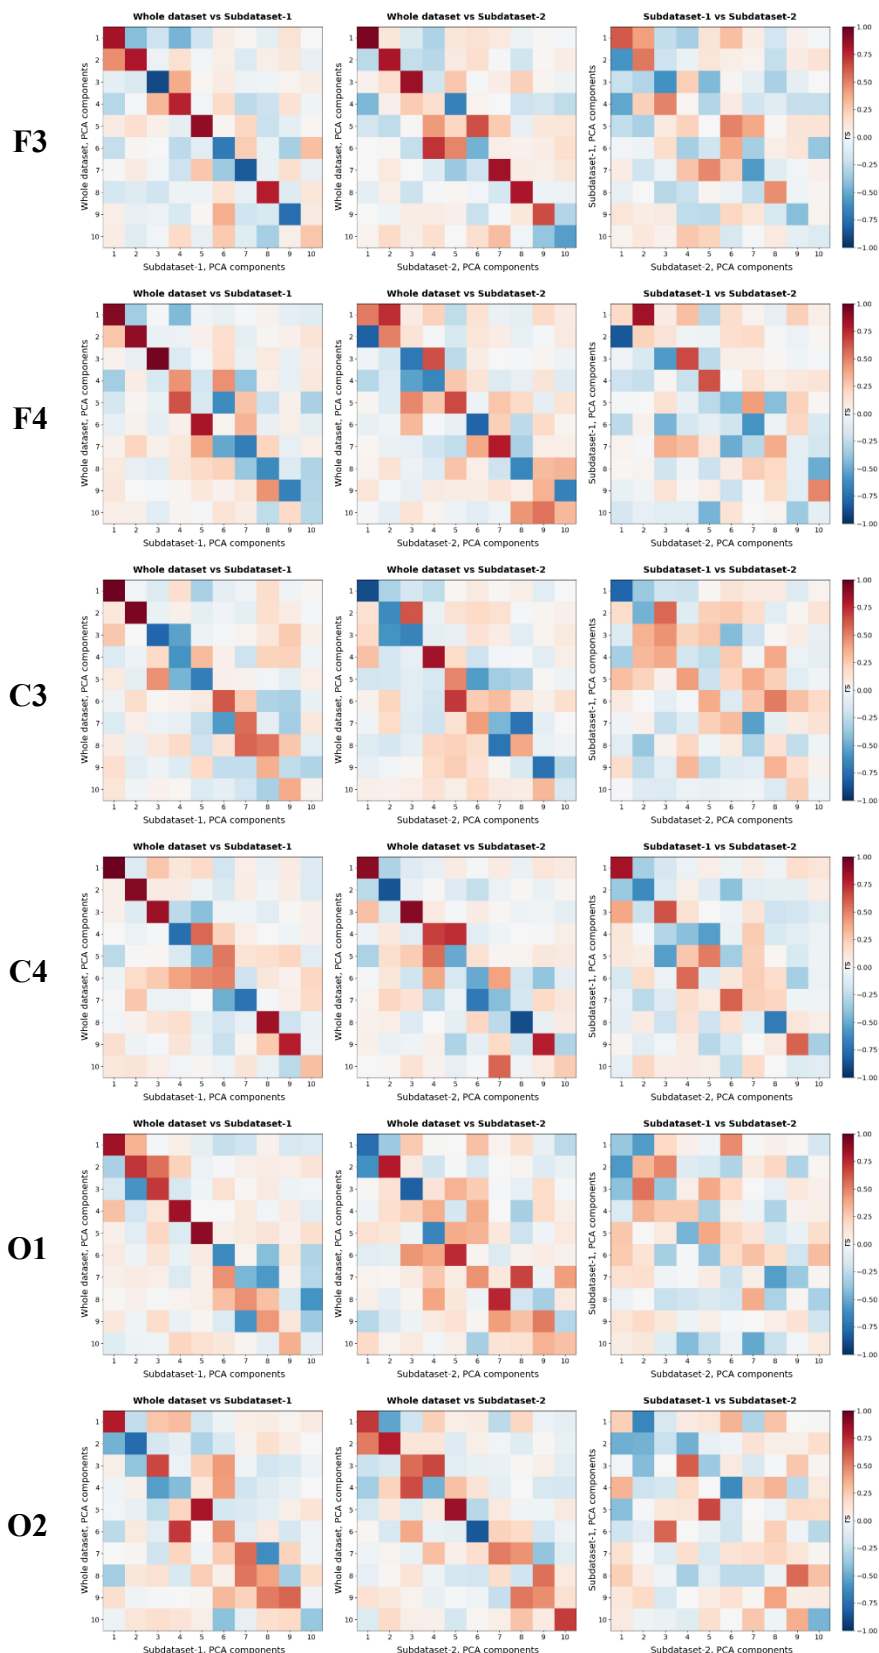

Fig. S12. Correlations between PCA component eigenvectors of the whole dataset and 2 subdatasets. Please see [Table S1](#) for detailed information about each group.

Abbreviations: [C3, C4, F3, F4, O1, O2], channel's code in the standard 10-20% electroencephalography montage; PCA, principal component analysis; rs, Spearman's correlation coefficient; SO, slow oscillations.

Split-half reliability correlation matrices (SO-phase histogram datasets, NREM + REM sleep stages together)

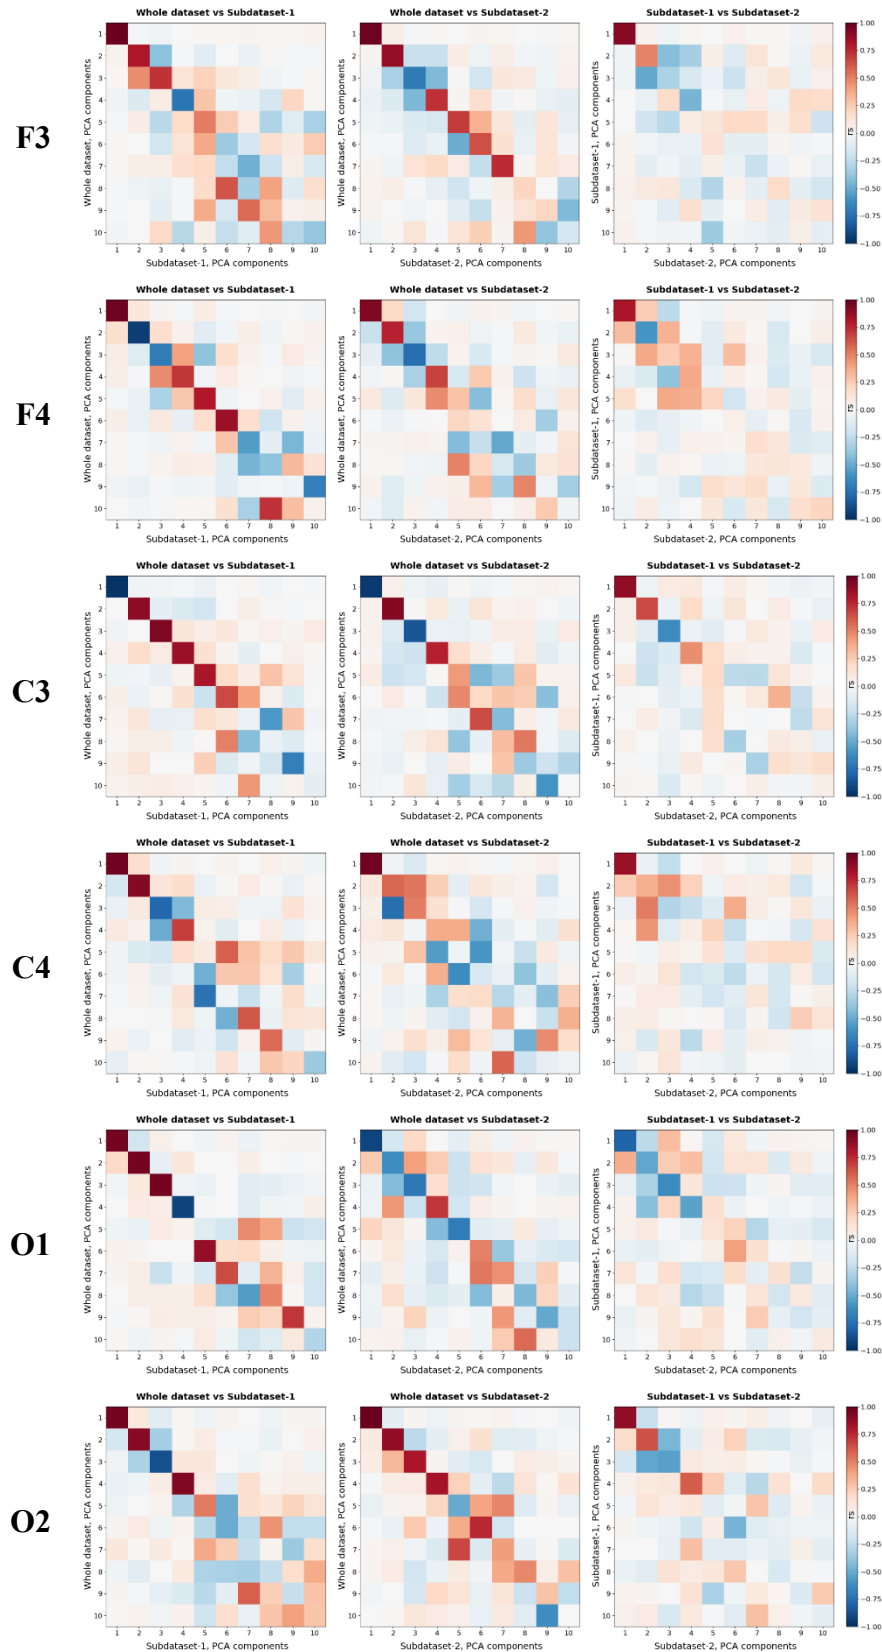

Fig. S13. Split-half reliability correlation matrices for SO-phase histograms (NREM+REM sleep). Correlations between PCA component eigenvectors of the whole dataset and 2 subdatasets. Please see **Table S1** for detailed information about each group.

Abbreviations: [C3, C4, F3, F4, O1, O2], channel's code in the standard 10-20% electroencephalography montage; **PCA**, principal component analysis; **rs**, Spearman's correlation coefficient; **SO**, slow oscillations.

ROC curves of the SO-power histogram datasets separability (NREM+REM stages together)

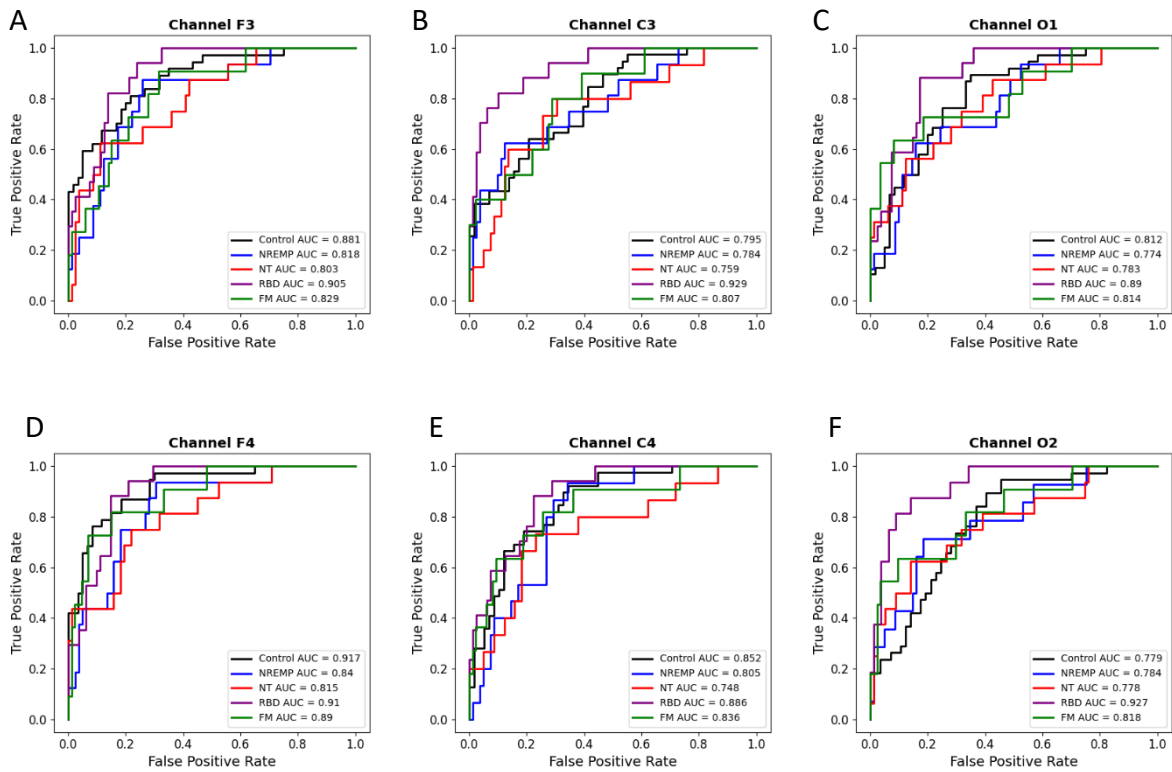

Figure S14. ROC curves illustrating group-level discrimination based on PCA projections of SO-power histograms (NREM+REM sleep stages combined).

Each curve reflects a binary logistic regression model trained to distinguish one group versus all others, using internal cross-validation. PCA was performed on the full dataset to preserve interpretability of the components. Detailed group information is provided in **Table S1**.

A, B, C, D, E, F: ROC curves for channels F3, C3, O1, F4, C4, O2, respectively.

Abbreviations: AUC, area under the ROC curve; [C3, C4, F3, F4, O1, O2], channel's code in the standard 10-20% electroencephalography montage; FM, fibromyalgia; NREMP, non-REM parasomnia; NT1, narcolepsy type 1; PCA, principal component analysis; iRBD, idiopathic REM behavior disorder; REM, rapid eye movement sleep stage; ROC, receiver operating characteristic curve; SO, slow oscillations.

ROC curves of the SO-phase histogram datasets separability (NREM + REM stages together)

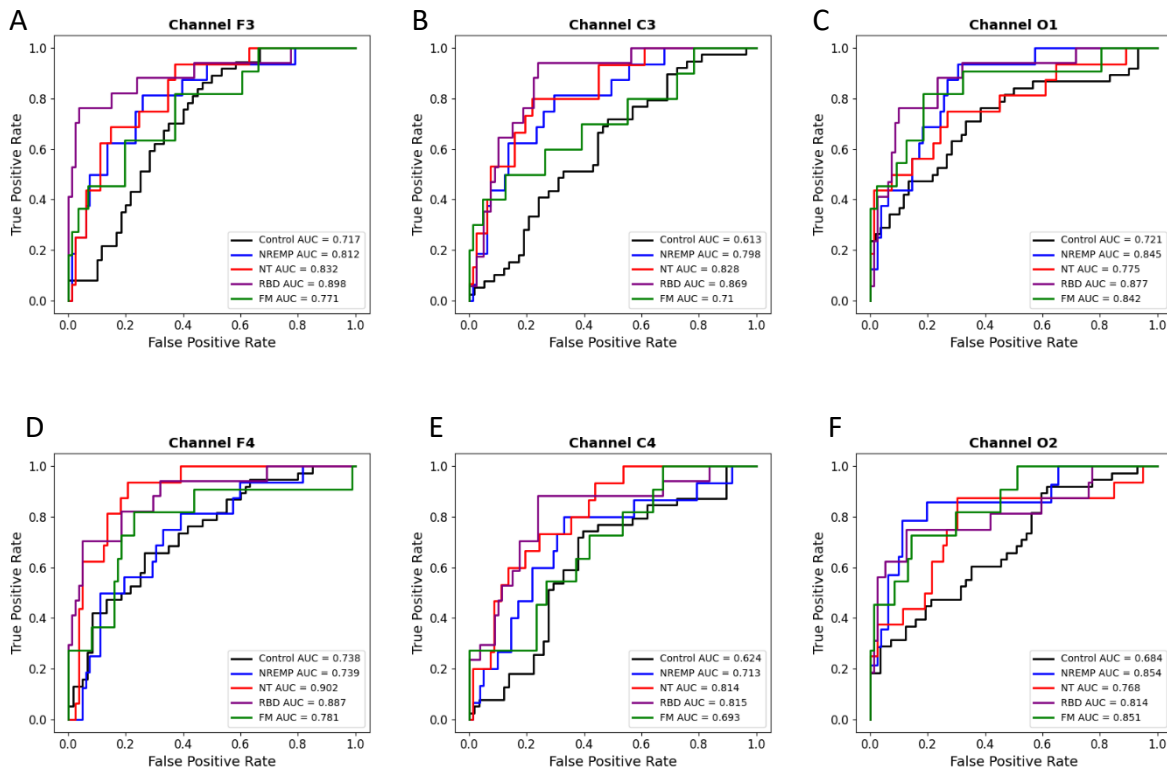

Figure S15. ROC curves illustrating group-level discrimination based on PCA projections of SO-phase histograms (NREM+REM sleep stages combined).

Each curve reflects a binary logistic regression model trained to distinguish one group versus all others, using internal cross-validation. PCA was applied to the full dataset to preserve component interpretability. Detailed group information is provided in **Table S1**.

A, B, C, D, E, F: ROC curves for channels F3, C3, O1, F4, C4, O2, respectively.

Abbreviations: AUC, area under the ROC curve; [C3, C4, F3, F4, O1, O2], channel's code in the standard 10-20% electroencephalography montage; FM, fibromyalgia; NREMP, non-REM parasomnia; NT1, narcolepsy type 1; PCA, principal component analysis; iRBD, idiopathic REM behavior disorder; REM, rapid eye movement sleep stage; ROC, receiver operating characteristic curve; SO, slow oscillations.

Permutations tests for SO-power histogram datasets separability (NREM + REM sleep stages together)

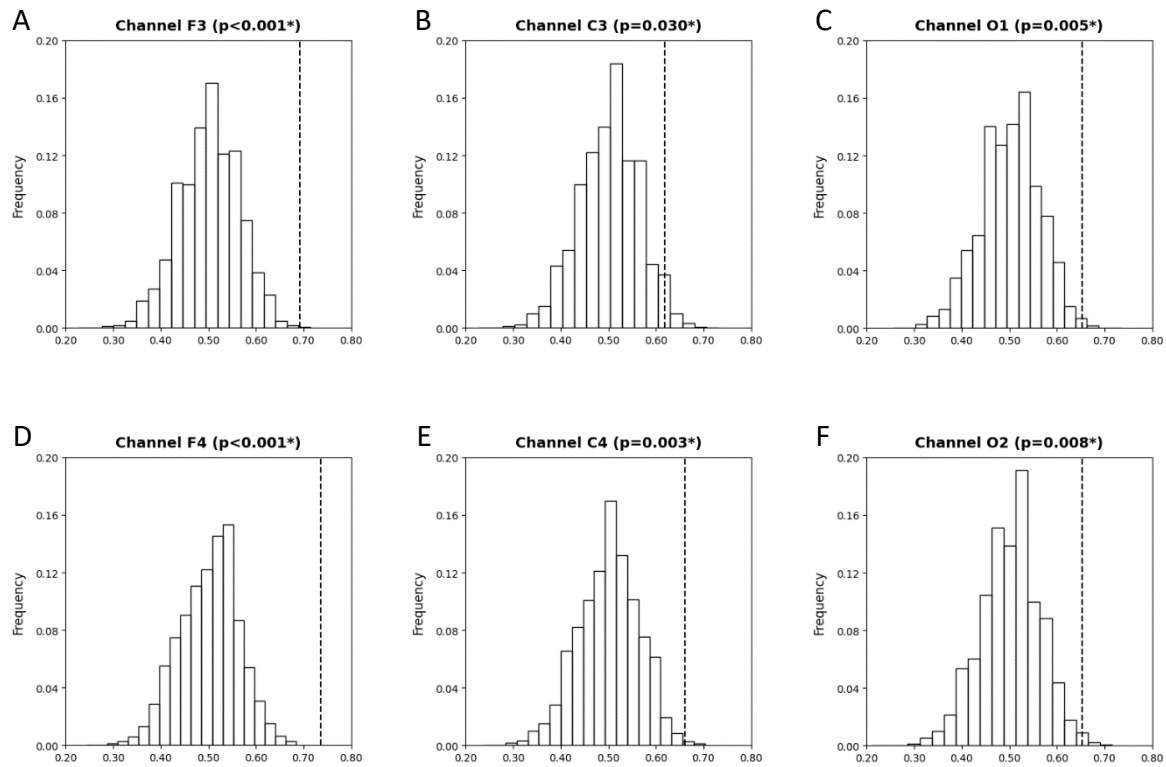

Figure S16. Permutation tests for logistic regression models trained in a fixed PCA feature space derived from SO-power histograms (NREM+REM stages combined).

Dashed lines indicate classifier performance (ROC-AUC) using true labels; histograms show the distribution of ROC-AUC values from 1,000 label shuffles. Detailed group information is provided in **Table S1**.

A, B, C, D, E, F: results of the permutations tests for channels F3, C3, O1, F4, C4, O2, respectively.

* $p \leq .05$. P-values for the channels F3 and F4 were $7.0E-4$ and $1.0E-4$, respectively.

Abbreviations: [C3, C4, F3, F4, O1, O2], channel's code in the standard 10-20% electroencephalography montage; **p**, p-value; **PCA**, principal component analysis; **SO**, slow oscillations.

Permutations tests for SO-phase histogram datasets separability (NREM + REM sleep stages together)

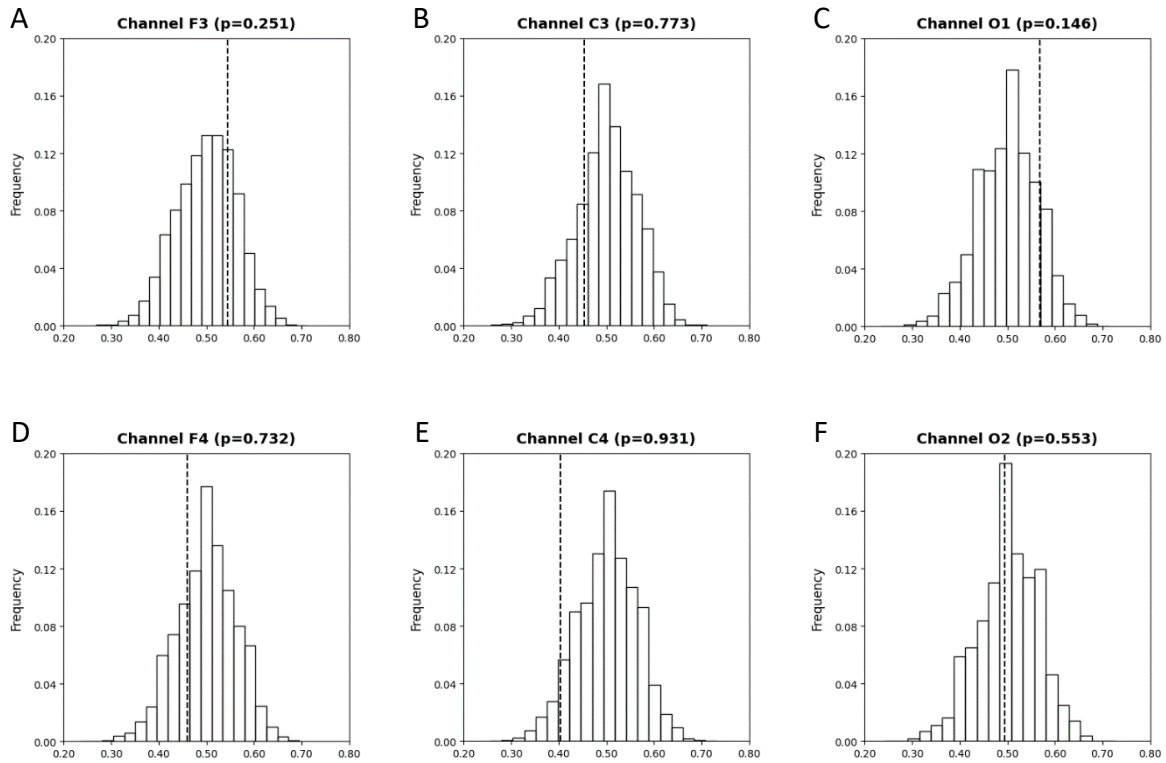

Figure S17. Permutation tests for logistic regression models trained in a fixed PCA feature space derived from SO-phase histograms. Dashed lines show ROC-AUC values on original labels. Detailed information about the groups is presented in **Table S1**.

A, B, C, D, E, F: results of the permutations tests for channels F3, C3, O1, F4, C4, O2, respectively.

Abbreviations: [C3, C4, F3, F4, O1, O2], channel's code in the standard 10-20% electroencephalography montage; **p**, p-value; **PCA**, principal component analysis; **SO**, slow oscillations.

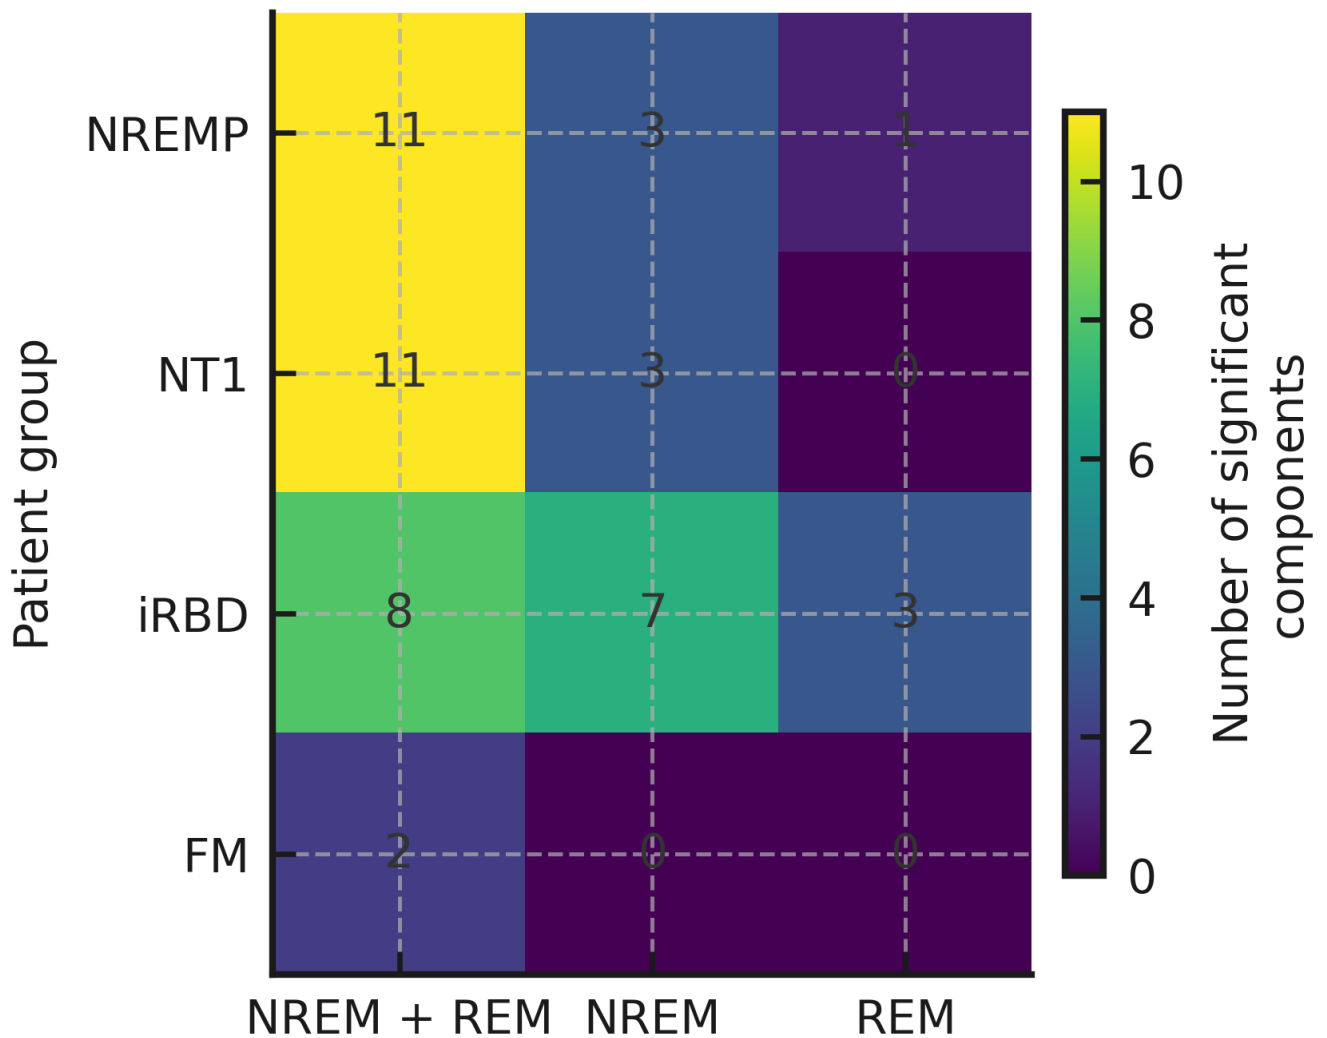

Figure S18. Summary of significant SO-power differences between controls and patient groups. Heatmap showing, for each patient group (rows) and sleep stage (columns), the number of SO-power components in which TF-peak features differed significantly from controls (Bonferroni-adjusted $p \leq 0.05$). Counts aggregate across channels (F3/F4, C3/C4, O1/O2) and across PCA and ICA components derived from SO-power histograms. NREM+REM sleep refers to analyses performed on combined NREM and REM sleep stages; NREM and REM sleep refer to stage-specific analyses. Numerical values in each cell indicate the exact number of significant components, and colour intensity encodes the same quantity. Component-wise statistics are reported in Supplementary Tables S3–S8 (NREM+REM), S10–S13 (NREM only), and S15–S16 (REM only).

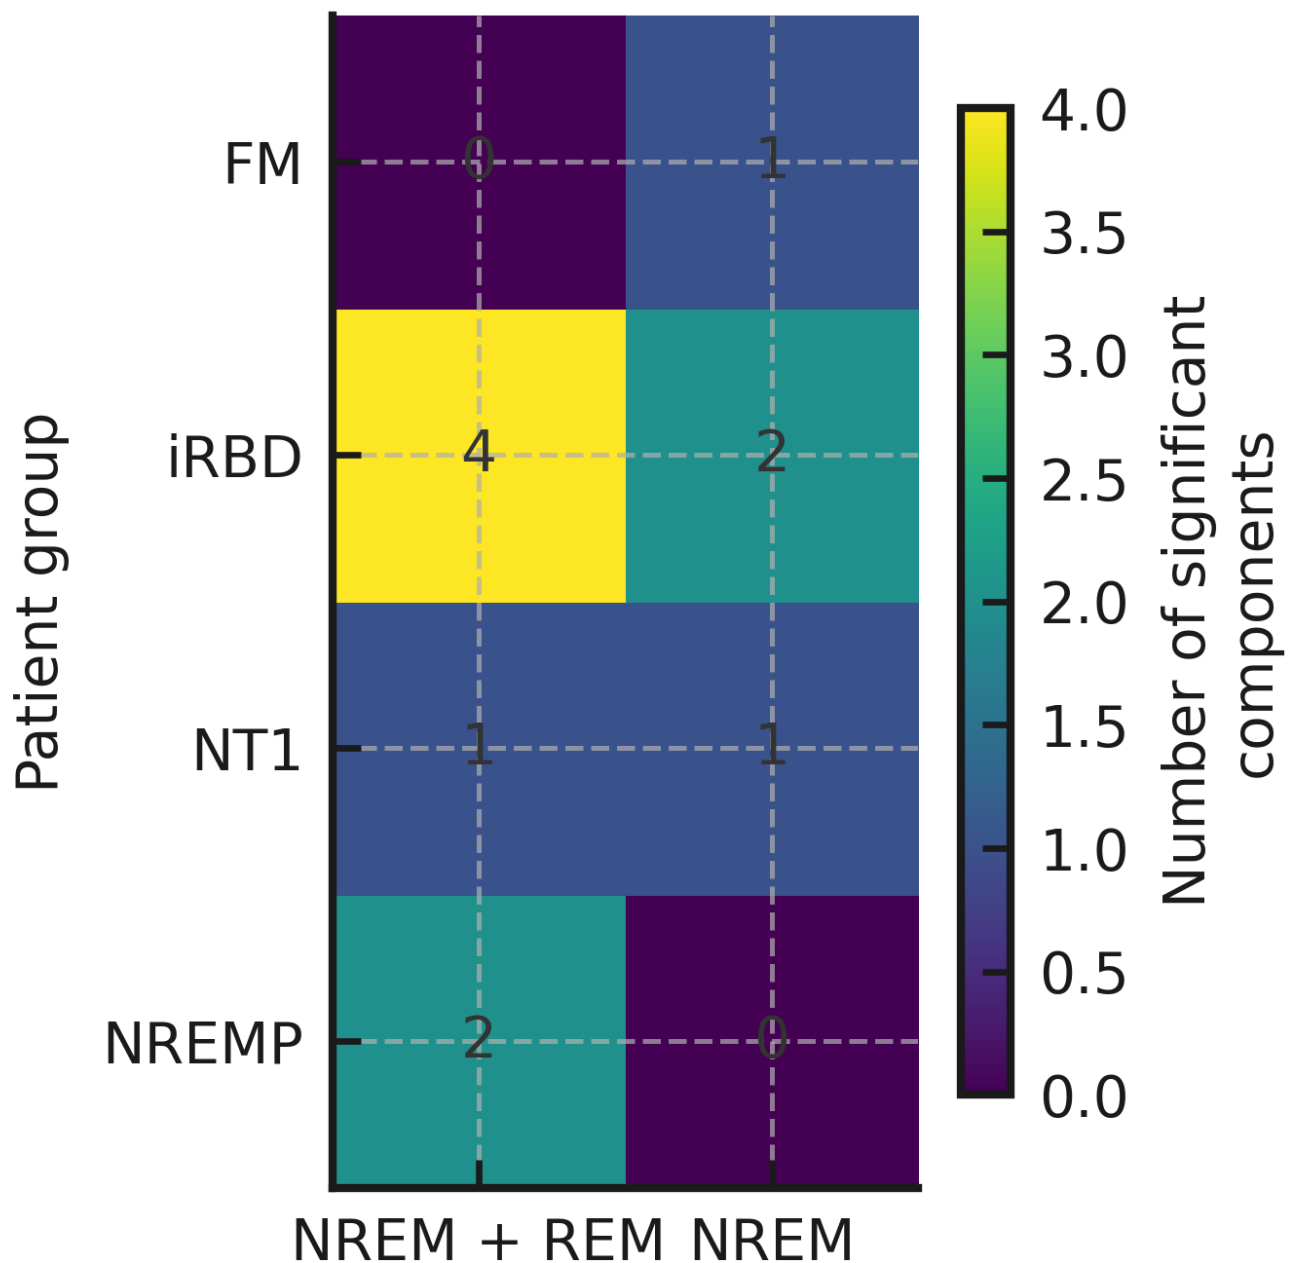

Figure S19. Summary of significant SO-phase differences between controls and patient groups. Heatmap showing, for each patient group (rows) and sleep stage (columns), the number of SO-phase components in which TF-peak features differed significantly from controls (Bonferroni-adjusted $p \leq 0.05$). Counts aggregate across channels and across PCA and ICA components derived from SO-phase histograms. As in Figure S18, NREM+REM sleep denotes analyses on combined stages, whereas NREM sleep refers to stage-specific analyses; no REM-only sleep SO-phase components reached significance after correction. Numerical values in each cell indicate the exact number of significant components, and colour intensity reflects the same quantity. Component-wise statistics are reported in Supplementary Tables S18–S23 (NREM+REM) and S25–S28 (NREM only).
