ROYAL COLLEGE OF GENERAL PRACTITIONERS
BIRMINGHAM RESEARCH UNIT
ANNUAL PREVALENCE REPORT

INTRODUCTION

This report summarises data on the annual prevalence of disease (disease groups) reported by practices contributing to the Weekly Returns Service (WRS) of the Royal College of General Practitioners. Doctors and their employed practice nurses are required to enter the morbidity, which they encounter at every consultation on to the individual patient specific electronic medical record (emr). If no clear diagnosis can be made with reasonable probability they are required to enter the predominant symptom code as a diagnostic Read code (i.e. a code capable of mapping to the ICD Chapter Symptoms, Signs and Ill-defined conditions). As well as morbidity, recorders are required to enter the consultation or episode type – First, New or Other. This latter procedure is essential for monitoring disease incidence for which the WRS is best known but is not necessary for deriving annual prevalence.

Annual prevalence is defined from persons registered in the practice at the end of the recording year who have been reported with a specific disease (or group of disease) during the course of a twelve-month period. It is described as a population based rate based on the population either at the mid point of the year or at the end of the recording period (depending on the software house). Age grouping is determined from the age at the mid point of the year.

Data have been analysed according to the International Classification of Disease revision 9 (ICD9). All Read codes have been mapped to ICD9 for the purpose. They are presented as chapter based rates, disease related group rates and first 3 digit ICD rates. This document describes the results for 2007. The material has been provided by about half of the WRS practices. Not all practices were able to submit an annual analysis of data.

The results presented in this document are made without comment.

Prevalence report

Introduction - trends in observed annual prevalence (2001-2007)

The national census population for England and Wales in 2001, to which all data have been standardised is given in table 0.1. Disease prevalence is presented as age standardised rates per 10,000 by ICD chapter (table 0.2), Disease Related Groups (table 0.3) and first 3 ICD digits (table 0.4). Data are presented for the years 2001-2007. Chapter based rates for Symptoms, Signs and Ill-defined conditions are not available for the years 2001 and 2002.

Annual prevalence rates 2007

The location of practices providing data during 2007 is shown on the map in figure 1. The population monitored in the WRS during 2007 is given in table 1.1. Annual prevalence data are presented firstly as age standardised person prevalence rates with their confidence intervals, in three sets – persons, males and females. The presentation follows the above pattern; by chapter (table 1.2), by disease related groups (table 1.3) and by first 3 ICD digits (table 1.4).

The tables which follow present the age and gender specific data for all persons, males and females organised in the age groups < 1, 1-4, 5-14, 15-24, 25-44, 45-64, 65-74, 75 years and over. These are organised as above firstly by chapter (table 1.5), then by disease related groups (table 1.6) and lastly by first 3 ICD digits (table 1.7).

Further information

Further information on disease prevalence can be obtained from the Birmingham Research Unit of the Royal College of General Practitioners:

Acknowledgments

Staff members at the Birmingham Research Unit of the Royal College of General Practitioners produce this report from a combined effort. Particularly significant contributions have been by Michele Barley the System Administrator and Kenneth Cross the Unit's Statistical Advisor. The co-operation of the practices and the computer software houses is particularly appreciated.

Two pump priming initiatives are acknowledged. The West Midlands RHA supported the development of a West Midlands specific version of the WRS and this support encouraged the development of this programme to describe annual prevalence. The Health Protection Agency (formerly Public Health Laboratory Service) subsidised the enhancement of our computer-based system, which has facilitated the development of this service. The basic WRS concerned with weekly incidence of illness is funded by the Department of Health.

The hard work undertaken by all participating practices and all the staff involved is very much appreciated.
