### **Studies of change in British woodland by K J Kirby**

These data and the associated report form part of studies conducted over the course of my career with first the Nature Conservancy Council and then its successor bodies (English Nature and Natural England) and into my retirement as a visiting researcher with the Department of Plant Sciences.

The data are available for use by other researchers; while I live I would suggest that potential users contact me before conducting their research in case there are factors that they should consider that are not obvious from the data itself.

Any use of the data should be credited using the following format:

*I/We* acknowledge the use of data collected by K J Kirby and colleagues from Natural England and its predecessors.

## Species names

The following lists the species recorded with their England and Scientific names, abbreviations used in the quadrat records and BRC codes. The species type refers to whether these have been classed as (1) non-woodland, (2) woodland generalists, (3) woodland specialists in the analyses.

English Name	Scientific name	abbreviation	BRC code	species type
	Giant fescue			Festuca gigantea
	Red fescue			Festuca rubra
	Meadowsweet			Filipendula ulmaria
	Wild strawberry			Fragaria vesca
	Yellow archangel			Lamiastrum galeobdolon
	Common hempenettle			Galeopsis tetrahit
	Goosegrass			Galium aparine
	Hedge bedstraw			Galium mollugo
	Sweet woodruff			Galium odoratum
	Common marsh bedstraw			Galium palustre
	Herb Robert			Geranium robertianum
