

DESCRIPTION OF SUPPLEMENTARY DATA

Crosslinking substrate regulates frictional properties of tissue-engineered articular cartilage and chondrocyte response to loading Christoph Meinert, Angus Weekes, Chun-Wei Chang,

Karsten Schrobback, Amy Gelmi, Molly M. Stevens, Dietmar W. Hutmacher, Travis J. Klein

Queensland University of Technology (QUT), Brisbane, Australia

Supplementary Data – Video SV1 – Video of GelMA-HAMA hydrogel crosslinked between PTFE and glass substrates, demonstrating the frictional properties of the different surfaces.

Supplementary Data – Figures S1-S4.
