	Genitourinary medicine-linked general practice	98	9%
	Other general practice	7	1%
	Other hospital outpatient / inpatient	3	0.3%
Number of infections per individual during study	1	791	75%
	2	91	9%
	3	17	2%
	4	5	0.5%
	5	2	0.2%
	7	1	0.1%

Table 2. Patient characteristics for 1061 *N. gonorrhoeae* infections in Brighton (January 2011 – March 2015). Patient age was not recorded for 23 samples, gender for 2 samples, and referral source for 25 samples. Sequences >60 SNPs different from any other in the same patient were considered distinct infections (see Results).
