

Introduction: India's Rise at 70

Manjari Chatterjee Miller and Kate Sullivan de Estrada

The 70th anniversary year of India's independence from two centuries of British colonial rule provides an excellent occasion to take measure of a country that, today, is pivotal for both Asian and international stability. At 70, despite the persistent domestic challenges of poverty and inequalityⁱ, India is widely considered a rising power,ⁱⁱ and is indisputably the world's largest democracy. In 2015, the Indian economy grew at a rate of 7.5%, faster than that of China.ⁱⁱⁱ As a nuclear-armed state, India enjoys recognition as a responsible nuclear power from key stakeholders in the non-proliferation regime, despite not being a signatory to the Non-Proliferation Treaty (NPT).^{iv} And the past three presidents of the United States, a country once dismissive of India,^v have sought to engage New Delhi as a close economic or strategic partner, or both.^{vi} To some, India is likely to become “the most important swing state” in the international system.^{vii}

These facets of India as ‘a rising power at 70’ have been some decades in the making. However, in May 2014, the rise to the Indian premiership of Narendra Modi, a controversial political figure, presents a further cause for reflection and analysis. While the 2016 outcomes of the referendum vote on the UK's exit from the EU and the US presidential election are still fresh—and to some, raw—it is worth remembering that two years previously, India faced a similarly seismic democratic moment. In the words of one commentator, India became divided between ‘one segment of people who felt that Modi's victory signified the glorious consolidation of their own economic and social ascendancy, and another segment who felt devastated by the result, seeing in it a crushing of their dreams for themselves, their communities and their country’.^{viii} Accompanying this perhaps familiar portrait of a divided citizenry was speculation at home and abroad over possible foreign policy directions in Asia and beyond, following Modi's ascent to power.^{ix} Just as analysts and politicians have, in 2016, sought to compute what Brexit and Trump

will mean for the future of world politics, from 2014 commentators wondered if and how Modi's leadership mattered for India's foreign policy and, by extension, for the world.

Driving the assessments of India's rise and recent foreign policy trends that comprise this special issue are two key objectives. The first, is to consider India's rise in light of the election of Narendra Modi as prime minister and to assess both his foreign policy record so far and the future potential for continuity and change under his leadership. The second, is to engage with the perspectives of three major global players—the United States, China, and the United Kingdom, in order to understand how India's rise is viewed internationally.

In doing so, this special issue makes three new contributions. First, it utilizes a spectrum of different theoretical frameworks and empirical analyses in order to present an extensive portrait of contemporary India's global role and foreign policy directions. It engages with variables such as ideas, norms, interests, institutions, individual leaders, state perceptions and beliefs, and topics spanning India's key relationships and tensions, history, and foreign policy changes and continuities. This breadth is important because detailed discussions of Indian foreign policy tend to be scattered across and confined to regional or India-specific academic journals, think tanks and the media. Rarely have Western International Relations (IR) journals engaged seriously with India.^x This special issue represents, to our knowledge, the first time that Indian foreign policy has been the central focus of an English-language IR journal edited out of 'the West'.

Second, the issue surveys the record and weighs the potential of, not only a single leader, but a current prime minister. In doing so, it, perhaps a little ambitiously, dabbles in the currency of uncertainty and seeks to draw early conclusions about the impact of Modi's leadership on future

foreign policy directions. Yet we believe that such a task is necessary and important both to bridge a much lamented academic-policy divide,^{xi} and to offer robust analysis to complement the few book-length studies of Modi's foreign policy that have gone to press in India, some of which have been questioned for their pro-Modi bias or hagiographical tone.^{xii}

The third contribution of the special issue is the diversity in views that it presents of both India's rise and Modi's foreign policy. This issue brings together contributions from a group of scholars based in Singapore, Australia, the United Kingdom, the United States, Germany, and India. As such it presents perspectives that span a broad arc of the globe, and, as will become clear, a broad range of perspectives on both Modi, and India.

India's Rise at 70: Foreign Policy under Narendra Modi

The first part of this issue comprises assessments of Indian foreign policy and its stasis or change, under the leadership of Narendra Modi. Modi's 2014 election win saw the first parliamentary majority achieved by a single party in India since 1984. Moreover, that party was the same Hindu nationalist party—the Bharatiya Janata Party (BJP)—whose 1998-2004 leadership presided over events of lasting, and global magnitude: India's nuclear tests, and two significant crises between India and Pakistan. Modi's image as a controversial and unpredictable leader and a self-styled 'strong man' who had pledged to take a firm line on national security led to prognoses that he would substantially change the direction of India's foreign policy. A number of predictions circulated: that Modi would turn out to be a pragmatist,^{xiii} that he would dismantle India's long-held policy of non-alignment,^{xiv} and that his 'single-mindedness', which led to the rapid economic transformation of the state of Gujarat during his tenure as chief

minister, would transform India.^{xv} Such expectations of change were further underscored by the prime minister's well-known commitment to *Hindutva* or Hindu nationalism, which it was supposed would affect not just domestic politics but also foreign policy.^{xvi} Moreover, some predicted that his apparently^{xvii} substantial mandate in the election would position him as a powerful national leader with the necessary authority and support to instigate the changes he desired in India's foreign policy.^{xviii}

In response to such predictions, the articles that comprise this section of the special issue, by and large, point to a powerful set of constraints that limit what any individual leader can achieve in seeking to transform India's foreign policy, even while some acknowledge the personal will of Modi to affect change.

The opening pieces by Basrur, and Miller and Sullivan de Estrada assess material and ideational continuity in Indian foreign policy. Basrur emphasizes the manner in which India applies material power, its preferences vis-à-vis major powers, and its quest for status transcend any single Indian leader. The realities of the international power structure, India's relationships with major players, and its security and status interests mean that Modi will continue to opt for restraint, pursue partnerships with players such as the United States and the BRICS, and seek membership in status-enhancing elite clubs such as the United Nations Security Council. Miller and Sullivan de Estrada argue that Modi is indeed a pragmatic leader as many have suggested, but pragmatism does not mean dispensing with longstanding foreign policy ideas. Instead, Modi's pragmatic engagement with India's foreign policy involves working within the constraints of ideas and ideologies, and responding to their political and social logics, rather than outside them. As such Modi is no different from other Indian leaders in that he displays deference to longstanding ideational frameworks, even in policy initiatives that seem to break

with the past. This can be observed in his territorial diplomacy with Bangladesh, and his cultural diplomacy through the Indian-led establishment of an International Day of Yoga.

Hall and Narlikar both examine the impact of norms and institutional agendas on Modi's capacity for change, but come to quite different conclusions. Hall argues that although India has always sought to be a 'norm entrepreneur' in international politics, Modi has been, so far, unable to offer and set a new normative agenda. The intellectual traditions he draws upon, Hindutva and the thought of Vivekananda, provide limited resources for the construction of alternative norms. Narlikar, on the other hand, is more optimistic about Modi's potential as an agent for change in international institutions and regimes, partly on the basis of the innovative way in which she sees Modi selectively drawing on an Indian cultural repertoire. In addition to this, she argues, Modi also has a strong mandate for economic growth and is more willing to play along with the existing rules and structures of global economic governance than previous leaders.

Bajpai and Sridharan take distinctive bidirectional views on the same dynamic: the relationship between Modi and the region. Bajpai turns his focus to Modi's agency within the region, arguing that India under Modi is moving away from restrained bilateralism in dealing with both China and Pakistan, and toward coalition-building against them. For both reasons he sees Modi breaking with the past. In contrast, Sridharan examines the structural constraints faced by India in the region, arguing that a state's power is defined not just by its capabilities but those of its neighbors and opponents. The key constraint that confronts the rise of India is regional contestation, with the result that New Delhi will likely continue its search for security vis-a-vis China and Pakistan and its realignment towards the US and away from Russia.

Taken together, these six pieces underscore the constraining role of both geopolitical realities at the regional and global levels and frameworks of influential domestic ideas, even as they point to

innovation in the style, method and energy of Modi's approach to foreign policy. In other words, while Modi's agency may signal something new for India, these pieces collectively demarcate a limited space within which foreign policy innovations unfold.

India's Rise at 70: The View from Outside

Turning the lens back on India from the outside, Pant and Joshi, Pu, and Scott deliver assessments of India's rise, and Modi's leadership, taking into account the interests and visions of the United States, China, and the United Kingdom, respectively.

Pant and Joshi review India-US relations under the Modi leadership and argue that India is decisively responding to US overtures in a manner that no prior leader has been able to achieve. What is different under Modi, for Pant and Joshi, is India's convergence and delivery on thorny bilateral issues, such as defence agreements and the issue of nuclear liability, that have long stood as impediments to a US-Indo partnership of potential owing to India's hesitance. They view, by implication, the United States as happily accommodating India's rise, not least because India stands as a potential counter to the rise of China.

In contrast, Pu's reading of China's response to a rising India is one of ambivalence. While China's general framing of India is as a global partner rather than a threat, China only partially, conditionally and inconsistently supports India's status aspirations. To explain this, Pu points not only to the asymmetry of power between the two countries, but also to the gap in perspective between the Chinese elite, who promote a 'sensitive' narrative emphasizing developing country solidarity, and the public, whose tenor is more nationalistic.

Finally, the question raised through Scott's analysis of India through British eyes is less one of whether the UK will accommodate India, and more whether India will accommodate the UK. Scott argues that India's economic growth has transformed the UK-India relationship, where India's economic strength is improving its political hand vis-à-vis the UK, and the UK's importance is far diminished. Trade and investment between the two will continue, predicts Scott, but it is unclear whether Brexit means India will shift its economic focus to the EU as a partner or whether a bilateral free trade deal will bring the two countries into a closer embrace.

India's Rise at 70: Some Takeaways

India today is a formidable economic force and is gaining in both political power and status. Taken collectively, the articles in this special issue underscore both the importance of India's rise and the challenges and benefits of weighing systematically the contribution of a current prime minister, Narendra Modi, to India's foreign policy.

The ascendance of Narendra Modi can and should be seen in the light of the global trend of the emergence of "strong men" leaders with hyper-nationalist agendas, such as Xi Jinping, Vladimir Putin, Recep Erdogan, and Donald Trump. While this special issue does not take Modi's domestic policies as its central focus, it also does not intend to suggest that Modi is a leader in the tradition of Indian prime ministers before him. Since he rose to power in May 2014, Modi's Hindu nationalist leadership has provided legitimization for extremist discourses and actions, frequently along religious lines. Domestic movements associated with the BJP-affiliated Rashtriya Swayamsevak Sangh (RSS), a radical right-wing Hindu nationalist organization and a key source of political support for the BJP, have challenged India's secular social order and

Modi has offered little in the way of condemnation in response.^{xix} As Sumit Ganguly has argued, ‘Even as [Modi] courts foreign leaders with grace, projecting professional cosmopolitanism, his government has tolerated, even abetted, a dangerous, parochial social agenda at home.’^{xx} Modi’s willingness to accept religious and other forms of bigotry within India could eventually pose a threat to his ambitions to cultivate higher status for India on the world stage.

None of our contributors would dispute that India’s status in the international system has evolved substantially since 1947. Nor do they argue that Indian foreign policy is static and incapable of shifts. However, most would suggest that, overall, India’s foreign policy transformation operates in a narrow space. While Modi may have the personal drive to effect changes, such as the repackaging of India’s approach to international cooperation on climate change, and while these changes may lead to some transformative policy successes, his role at the helm of India’s foreign policy is less original and ground breaking than some commentators have supposed. Future radical changes are unlikely and most apparent shifts, such as the closer India-United States relationship, predate Modi’s premiership. If India is likely to become “the most important swing state” in the international system, Modi will have played only a modest part in this emergence.
