Grammatical studies in the Akkadian dialects of Babylon and Uruk 556–500 B.C.

Gwyneth Hueter
Wolfson College

Thesis submitted in fulfilment of the requirements for the degree of Doctor of Philosophy in the Faculty of Oriental Studies, University of Oxford
Michaelmas 1996

Abstract

Neo-Babylonian (NB) was the last surviving dialect of the Semitic language known as Akkadian and it was still being used for the compilation of records at the beginning of our era.

Many thousands of NB economic and legal documents and letters exist, particularly from the sixth century B.C., yet the language is still to be studied, as the various ways in which a word could be spelled suggested it was no longer coherent as a language and therefore that it was not worth studying. Aramaic was presumed to have taken over.

I have attempted to find out if this is the case by making a synchronic grammatical study of the NB dialects of Babylon and Uruk from 556 to 500 B.C. These cities have been chosen because they have produced considerable amounts of material. The period also spans the Persian conquest of 539 B.C.

Part one deals with syntax and morphology. Consistency of syntactical patterns indicates that NB was a living and evolving language and that the influence of Aramaic and Old Persian was minimal.

Part two deals with orthography and suggestions on pronunciation and stress. The main difficulty in establishing how much NB has changed from earlier phases of Akkadian (including earlier NB) lies in understanding how the loss of short final vowels has changed word shape. The extent to which words could end in consonant clusters is not clear as cuneiform is unable to represent consonant clusters in word final position.

I conclude that the lack of difference between the NB dialects of Babylon and Uruk suggests that efforts were being made to preserve the language and that the scribal teaching methods must have been similar in the two cities.
Acknowledgments

Those who indulge in study for a doctoral thesis are on a road to personal discovery. I would not have been able to keep to the road without the help of Jeremy Black, my supervisor, whose knowledge of grammar, Akkadian, Sumerian and English has guided me throughout. His work in correcting the finished piece has also been invaluable.

In choosing a topic for the thesis I have had to change tack twice, and much has been gained in small talk with other Assyriologists. Mark Geller in London told me that the Kuyunjik letters had already been the subject of a thesis after I had spent several months' work on them. Stephanie Dalley in Oxford encouraged me to narrow the focus on the period of NB to draw from for study, at a time when I did not yet realise how vast the amounts of available NB material were. She has also been a great help to me in more general matters Assyriological. Heather Baker's (Oxford) interest in the Egibi family has resulted in valuable additions to the Babylon corpus. Eleanor Robson (Oxford) has helped me sort out computer problems and I thank Christopher Walker of the British Museum for the use of his cuneiform font.

After my British Academy award expired, body and soul have been kept together by my work in the Audiology department in the Radcliffe Infirmary, Oxford. Many times my colleagues have rescued me from the doldrums. They have been as family to me.

Finally, I will be forever grateful to Jill Butler and Colin Kirk who let me use their hotel in Ticheville, Normandy in the closed season at the end of 1993, to carry out my undistracted analysis of the texts.
Contents

Introduction

Part 1: Syntax and Morphology

chapter I: Main clauses

§ 1 Verbless clauses
   a) Subject-predicate juxtaposition
   b) Prepositional phrases as predicates
   c) Dative pronouns as predicates
   d) The pronouns šū, iššū etc., as predicate or copula:
      i) šū
      ii) iššū
   e) iānu

§ 2 Predicative verbal adjectives (the “stative” or “permansive”)
   a) Nominal predicative forms
   b) Non-active forms, describing a state or attribute
   c) The pari equivalent of active transitive verbs
      Note regarding išū

§ 3 lū, the asseverative particle
   i) lū māda
   ii) lū with finite forms

§ 4 Commands
   a) Imperatives
   b) The precative lū/lu-
      i) The precative of the verbless clause lū: “may it be...”
      ii) The precative with finite verbs:
   c) Precative forms without a precative particle
      i) The cohortative
      ii) Other forms without a precative particle
   d) ūbina(mma), binānimma “give me”
   e) Replacement of the imperative by the present-future
§5 Negation

a) Negation in nominal phrases and single words
b) Negation in verbal phrases
c) Prohibitions
d) la in subordinate clauses
e) Negation in questions
f) mimma emphasising negation

§6 Speech and questions

a) Direct speech
b) Questions and indirect questions
   i) with question words
   ii) without question words

Chapter II: Conjunctions, prepositions, adverbs and interjections; expressions of time

§1 Conjunctions

a) Uses of coordinating u and ma:
   i) “and”
   ii) “but” (adversative)
   iii) Purpose clauses
   iv) Hendiadys
b) Disjunctive conjunctions expressing "or", "either...or":
   i) ī
   ii) lū, ī lū
   iii) lū...lū
   iv) ī kī
   v) kī...kī, kī...ū kī
   vi) lā...lā and anomalies: kī ša
   vii) Repetition or non-repetition (asyndetic parataxis) of conjunctions between strings of nouns or verbal clauses

§2 Prepositions

a) adī “until, up to (and including), by (usually with time or a date), for (a time period)”
b) akī, occasionally kī, kīma “equivalent to, according to, (functioning) as”
c) alla “apart from, other than”; alla + etēgu/atařu “to exceed, be more than”
d) ana “for, to, as etc.”

1 For indirect speech see III §4 a, below.
e) arki “after”
f) ašar French “chez”, “belongs to”
g) aššu “concerning, because of”
h) birē “between, within”
i) eber “across”
j) elat “in addition to”
k) eli “on the subject of, over, against”
l) eliš and šapiš “above” and “below”
m) ina “on, in, by, with, from, as a result of”

n) ittahū “by the side of”
o) itti “(together) with”
p) itū “adjacent to”
q) kidān “outside”
r) kūm “in compensation for, in exchange for, (acting) as”
s) kutalla in ina kutalla “behind”
t) libbu in ina libbi “in; among”
u) libbū “on the basis of, because of”

v) Compounds involving mahar “facing, opposite, in the presence of, before”
w) mala and ana mala “as much as; (quantitatively) appropriate to; according to; any”
x) mihrat “opposite”
y) Compounds involving muhhu “up to, regarding, against, from”

z) ina pānāt “before” (in a chronological sense)

aa) pānjānand compounds “before, at the time of; to have, to belong to”; lapānī “away from, against, by”

bb) qerbu “in”

c) ša “of”: the periphrastic genitive and its use instead of the construct
do) ša la and other words for “without, without the permission of”: šalānu and bal(ū)

e) tāh/teh “adjoining”

ff) ultu “from, since”

§3 Adverbs and interjections

a) ahāmeš on its own, “mutually, each other, one another”
b) akanna “here”
c) akannak “there”
d) ana muhhi (Uruk) and ina muhhi (Babylon) “regarding”
(this); “therefore”
f) anīn “now” (?)²

g) arki, arku “afterwards”
h) elat, ana elat “in addition; else”
i) enna (usually as interjection) “now (then)”; adi muhhi
   enna “up to now”
j) īānū “if not, otherwise”
k) ina ḥibbi “therein, therefrom, inside”
l) inanna, eninni “now”
m) ītī “in addition”

n) kapdu (kabdu?) “quickly”
o) kūm “in exchange”
p) mālmālīš “equally”
q) pānāt “before”
r) šaddagad “last year”

§4 Expressions of time
a) ām ā
b) Ways of saying “daily; monthly” etc.
c) Expressing a certain date in the past or future
d) References to a certain part of the day
e) “per month; per year”
f) References to the long term future
g) “x time ago”
h) adi ṭuppi, adi ṭuppi ana ṭuppi, ana ṭuppi ana ṭuppi

Chapter III: Subordinate clauses

§1 Relative clauses
a) using ša as a relative particle
b) using mala
c) Some observations
d) Relative clauses without a relative particle

§2 Subordinating conjunctions
a) adi “until”
b) adi la (la’i?) “before”, literally, “until not”
c) arku “after”
d) ašar “where, wherever; whoever”

² See the examples and discussion in §6 b i, above (ēkānī, questions), suggesting that anīn may actually mean “where?”.
e) ašša, ašša "as soon as"

f) kī "that; when"

g) libbu, ina libbi ša

h) libbū in libbū ša

i) Compounds involving muhhu

j) panāt in ina panāt ša “before”

k) ša “that”

l) ūm and compounds thereof, “when, as soon as”

§3 Conditional sentences

§4 The reporting of speech and oaths, using subordinating conjunctions

a) Indirect speech

b) Assertory oaths

c) Promissory oaths

Chapter IV: The finite verb

§1 The verbal system in the texts under analysis

a) iprus: the preterite

b) iparras: the present-future

c) iptaras

d) Verbs with the -t(a)n- infix (iptanarras)

§2 The derived forms of the verb

a) D form

b) Š form

c) N form

§3 Irregular and rare verbs

a) ušuzzu

b) Other irregular and rare verb forms:

c) Quadriliteral verbs

§4 The ventive

§5 The subjunctive

Chapter V: Nominal forms

§1 Nouns and adjectives

a) The singular and plural of nominal forms

b) The construct

c) Participles and adjectives denoting an activity

3 For direct speech see I §6 a, above.

4 For the construct see ša in II §2, above.
d) Infinitives

e) Abstract nouns

f) Collectives
g) Adjectives

h) kilalle

i) gabbi and kal

§2 Numbers

a) Cardinal numbers

b) Ordinal numbers

c) Fractions
d) Approximative numbers

e) The distributive adverbials ÂM and išēnā; "each one, one each"

§3 Pronouns

a) Independent (subject case)

b) Predicative suffixes

c) Suffixed (possessive)

d) Resumptive and proleptic suffixes
e) Object (accusative) suffixes

f) Indirect object (dative) pronouns and suffixes
g) mimma, ayyu: the indefinite pronouns "whatever, whichever"

h) ram(a)niš, ram(a)nišun etc., "oneself, themselves" etc.
i) mam(ma) "anyone", with negative "no one"

j) Demonstratives: "Dort-Deixis"

k) "Hier-Deixis"

l) ā (usually a demonstrative adjective)

Chapter VI: Other topics 177

§1 Comparative and intensive forms of nouns and verbs

a) Nominal forms

b) Verbal forms

§2 Impersonal subject, i.e. third-person active verbs for a circumlocation of the passive

§3 a) ana and the indirect or non-direct object

b) ana as a nota accusativi

---

5 For ana + infinitive see ana in II §2, above.
Part 2: Orthography and phonology

§1 Orthography: Patterns of spelling in the corpora

§2 Excursus: scribal training and its effect on the spelling. Lexical lists and the Nabû-ša-harê exercises

§3 The spelling of finite verbs, predicative adjectives ("statives") and imperatives
   a) No final vowel
   b) Short final vowel
   c) Plurals of verbs with a strong final consonant
   d) Plurals of final weak (indicative or subjunctive) and singular final weak subjunctives
   e) Observations on the use of > (û-û)

§4 Phonology and sound changes

§5 Comments on the pronunciation and stress of the NB of this thesis
   a) CVCV/CVC > CVC (CVC?)
   b) (C)VCCV preterites in verbs with a final weak consonant (not plural, subjunctive or vetitive plural)
   c) (C)VCCV > (C)VVC
   d) (C)VCCVCV > (C)VCCVC
   e) (VC)VCCVCV > (VC)VCCVC and other more complex patterns
   f) Nouns and verbs with suffixes
   g) Words with suffixes of more than one syllable

Appendix to part 2: spelling patterns of finite predicative and imperative forms 205

Part 3: Conclusions:

§1 A summary of the main characteristics of the NB in this thesis
§2 Evidence for influence from other languages
§3 Differences between the NB of Uruk and Babylon
§4 Final remarks and the extent to which NB was still a living language in the latter half of the sixth century B.C.
Appendices:

§1 Aramaic works which are of particular interest for the understanding of the orthography of the NB under discussion:
   a) The Tell Fekheriye bilingual inscription
   b) The Uruk incantation in cuneiform

§2 Graeco-Babylonica
   Comments on the development of m in NB

§3 Lexical items of interest

§4 Corpus of texts
   a) Texts cited and comments on the material
   b) Dating the letters used
   c) Selected logograms found in the texts

§5 Bibliography

Introduction

Not long ago it was rare for scholars attracted to the study of the Akkadian language to be interested in the Akkadian written after the fall of Assyria (612 B.C.). For them, anything composed afterwards was an exercise in composition in a dead language. This thesis aims to prove that among the copious amounts of Akkadian composed after 612 there is evidence to show that a living and productive dialect of Akkadian continued to exist.\(^1\) It aims to provide a grammatical description of Babylonian dialects restricted to two major cities and their environs, islands in the sphere of the dialect we call Neo- or Late Babylonian (NB; LB) and restricted to a period of just over half a century.\(^2\) No comprehensive study of NB has ever been made,\(^3\) and a complete grammar for the whole of NB would in any case be beyond the scope of any thesis as there is at least 600 years' worth of material written in Babylonian Akkadian from after the fall of Assyria. There are vast numbers of letters, economic and legal documents from before and during Achaemenid times as well as considerable numbers of economic, legal and administrative texts which continue right up until our era.\(^4\) There are also scientific and literary (including royal) texts, but these were written in a stylised form of Akkadian which for the literary material can best be described as “Late Standard Babylonian”. The scientific documents are in an abbreviated Akkadian whose dialectal form is difficult to determine.

Although the NB empire in the mid-sixth century B.C. extended over Mesopotamia, Syria, parts of Arabia and into Egypt, it is not possible to know the area over which NB was used. A look at the locations given in the economic and legal texts indicates that it was used in the major cities of Babylonia, from Ur in the south to Sippar in the north. There is as yet not much evidence for NB records outside of Babylonia, which could give the false impression that NB was limited to Babylonia only.

\(^1\) There is also an increasing amount of interest in the Neo-Babylonian period. In recent years scholars who have published or who are working on Neo-Babylonian material for publication include K. Abraham, H. Baker, P-A. Beaulieu, H. Bongenaar, M. Dandamaev, G. van Driel, G. Giovinazzo, Fr. Joannès, K. Kessler, J. MacGinnis, L. Shiff, M. Stolper, M. Streck, D. Weisberg and C. Wunsch.

\(^2\) The terminology will be discussed in the following section.

\(^3\) See below for details on the most comprehensive studies so far completed, namely those of Hyatt, Woodington and Streck.

\(^4\) Dandamaev (1986) is a very useful overview of the available material, its layout and provenance. At the time of his paper, 13,096 economic and business documents and letters from 626 to 331 had been published. There were 861 letters, roughly from 600 to 450 (p274). In (1984) more information is given on the published material. The figures are the same as the above. See my comments in e, below.
However, it must be borne in mind that existing NB tablets have been excavated from well-known sites and that lesser sites await excavation or have been obliterated by the passage of time. Tablets written in NB have been found away from the Babylonian heartland, e.g. the Persepolis tablet which records the sale of a slave, published by Stolper (1984). Stolper also refers to Achaemenid NB records written in Babylonia but found in Tyre and near Aleppo. There is the tablet found at Tell Tawilan (Jordan), of which a new translation has been published by Dalley. It was drafted at Harran. Dalley also lists Babylonian material found outside Babylonia after the fall of Assyria. Stolper believes NB was used among enclaves of Babylonians stationed in these places. Four tablets have recently been found at Šeîḥ Ḥamad (Assyrian Dūr-Katlimmu on the lower reaches of the river Ḥabûr). They are from the reign of Nebuchadnezzar and are written in Neo-Assyrian (NA) script. Two have notes in Aramaic. The latest cuneiform tablet to be found outside Babylonia is the Seleucid tablet found at Tell Fisna on the upper Tigris valley north of Mosul. It has defied attempts to read it.

Even if NB was restricted to Babylonia and was being replaced by Aramaic as the language of everyday use, one could still expect that there would be regional differences in the language. Likewise, there would probably also be differences in the training scribes received and this could lead to orthographical variations. It therefore seems more sensible to try to restrict the number of places from which material has been drawn (and make a deep study) rather than try to include a cross-section of material from the whole NB-using area (and merely scrape the surface), hence the choice of the Akkadian dialects used in Babylon and Uruk from the reign of Nabonidus to the end of the sixth century B.C. (556-500 B.C.).

This thesis is to be a study of synchronic variations (covering a fairly narrow time span) in two major cities which are a considerable distance apart. Before discussing my reasons for this choice of time and place, the choice of the term “Neo-Babylonian” rather than “Late Babylonian” for the Akkadian of this period needs to be explained.

6 (1993), 134-147. The material comes from Tell Halaf and Neirab which is near Aleppo.
7 See the SAA bulletin vol 7 issue 2 (1993, 75-150), especially the introduction by Postgate on p109.
8 The signs do not resemble known signs. See Black (1997).
Neo-Babylonian or Late Babylonian? Naming the dialect under scrutiny

The dialects of Akkadian have written records spanning over 2,500 years, and the latest of these dialects is now usually called Neo-Babylonian. There is a general consensus among scholars about the dating of the Old and Middle Babylonian dialects of Akkadian, but the criteria chosen to identify and separate NB and LB are matters of debate. The start of NB is generally accepted as 1000 B.C. (a conveniently round number), with Hyatt as the main exception.9 There can be no argument therefore that the Babylonian dialect10 found in some of the letters from the Assyrian archives in Kuyunjik is NB, as the letters date from the eighth and seventh centuries B.C. The main problem concerns the nature of LB and whether it is a separate dialect leading on from NB.

There are two main schools of thought on the dating of NB and LB:

- Von Soden, who dates spätbabylonisch (spB, LB) from 625 B.C. onwards, i.e. incorporating the time of the Chaldeaean (“Neo-Babylonian” kings). Followers are Borger (1979, p149), Groneberg (1987, vol 1 p1 and n2) and Caplice (1988 p5).

- The “earlier volumes”11 of the Chicago Assyrian Dictionary (CAD) originally dated LB from 539 onwards, i.e. after the Persian Conquest. Followers are Reiner (1966) and Ungnad and Matouš (1964).12

This latter view was held by the editors of the CAD but by the mid-1960s they had revised their stand, according to Brinkman, “Though in earlier volumes13 of the CAD the transition from NB to LB was considered to take place with the fall of the

9 Hyatt sets it as 1170, which he understood as the beginning of the reign of the first king of the second Ištar Dynasty (1941, p1). (All the more recent literature now has Marduk-kabit-ahhešu, the first king, reigning a little later, with a start date 1157–1146.) Lipin’s The Akkadian Language (Moscow, 1973, p17), gives dates for MB and LB. Between these entries he has “Young Babylonian”, which he says is used for literary and school compositions from the end of the second to the first half of the first millennium B.C. This appears to come between MB and NB in time but his description indicates that this is his translation of von Soden’s “Jungbabylonisch”. Lipin dates NB from 1000 to 605 B.C. and LB from Chaldeaean rule to the disappearance of Akkadian. Since he has dated MB from the sixteenth to the twelfth centuries, two centuries are unaccounted for.

10 Comprehensively studied by Woodington (1982, to whose thesis, as the only comprehensive grammar of any form of NB yet compiled, I refer throughout).

11 See the full statement by Brinkman, quoted below.

12 The English translation by H. A. Hoffner (1992) which does not depart from the German, has: “even after the capture of Babylon by Cyrus (539)...(LB) remained into the first pre-Christian century the literary and scholarly language, although it had long since been displaced as a spoken language by Aramaic”(p69) i.e. the nature of the non-literary material is not discussed.

13 Brinkman refers to volume A I (published 1964), but not B (1965). I am assuming that Brinkman means the “earlier volumes” are all those prior to volume B.
Chaldean dynasty in 539 B.C., LB is now being restricted to the royal texts of the Persian and Seleucid periods which are not written in the Standard Babylonian dialect.” (BiOr 23, 1966, p294a). This means that the use of the term “Late Babylonian” has moved from being a purely chronological definition to a genre- and chronology-based definition.

This is still the position of the CAD editors, according to Reiner (personal correspondence, 1993) and I accept and follow it as the most up-to-date interpretation. Therefore, although LB is used to describe Akkadian material produced after 539 B.C., it excludes the non-literary material with which this study is concerned. In recognition of this, I call the Akkadian under discussion in this thesis “Neo-Babylonian” and use the term LB (German “spB”) only when it is used in other sources from which I am quoting.

As an aside to the issue regarding the terminology of the vernacular Akkadian, there is a need perhaps for another term to indicate that the literary Akkadian after 539 B.C. is a continuation from and a late form of SB. New terms are in order, “Late SB”, or maybe “Late Literary Babylonian”, which is Knudsen’s description of the Akkadian found on the Graeco-Babyloniaca texts.

Presentation of the material in this thesis and understanding the orthography and phonology

It is assumed that those who come to the study of NB grammar will do so from a background of other Akkadian dialects (usually OB and SB). I acknowledge this prior familiarity with Akkadian by dealing with the syntax first, as this provides the most information about NB as a living language. However, in order to understand the language, it is necessary to be able to interpret the idiosyncrasies of the script and the variety of spellings for the same word, with the apparent disregard for inflections, all of which contribute to the conception of NB as a disintegrating language. These issues, along with that of scribal training, are dealt with in part 2.

As far as the evidence provided by the orthography is concerned, Middle Babylonian (MB) spelling still faithfully recorded the inflections. Presumably changes begin sometime towards the end of the second millennium or the beginning of the first. Written Babylonian material is very scarce during this period.

---

14 See appendix §2. I shall use “Late Literary Babylonian” for want of a better term, although the texts are actually late copies of SB texts.
15 See the examples in Aro (1955), for instance.
The use of the cuneiform signs in NB can be somewhat confusing, it being possible to spell the same word in a considerable variety of different ways, using signs that suggest different pronunciations. The general loss of final short vowels sometimes resulted in word final consonant clusters which could not be accurately represented in cuneiform. Contact with Aramaic may have caused this loss and it may also have caused changes in stress. It must be emphasised that the examples given in the discussions in chapter 3 and in the appendix are bound by cuneiform's orthographic limitations, which means that they may not, and probably cannot truly record spoken NB. These issues will be further examined in the chapters on phonology and orthography.

If the NB of this period is moribund or dead as a spoken language, then the training of its scribes would have considerable influence on its presentation. Conservative scribal orthographic habits make the identification of grammatical changes difficult. This occurs not just in vernacular NB but also in Late Literary Babylonian. I have provided some details on scribal training methods by examining the Nabû-ša-harê student texts.16

Previous major works on the Neo-Babylonian language

[A brief summary of earlier works is given here for the convenience of the reader.]

a) Tallqvist's *Contracte Nabû-nâ'id* (1890) uses the texts published two years earlier by Strassmaier, and includes not only the Nbn texts but also those from Nbk and Cyrus. It is very brief and has obviously been written with scholars of Hebrew, Aramaic, Syriac and Arabic in mind. Most of the book consists of a lexicon. Although it has probably outlived its usefulness I mention it here because it was the first grammar of NB to be published.

b) Hyatt's *The treatment of final vowels in early Neo-Babylonian* (1941) covers the period 1170–605, which he calls the Early Neo-Babylonian period.17 He admits that his division of periods is somewhat arbitrary in order to include all the important texts in a specific period (p2). Although he uses mostly letters, legal and economic documents as his corpus, he also includes kudurru inscriptions, which have literary and archaising tendencies.18

16 See part 2 §2.
17 He does not say what he calls the Babylonian from after this period.
18 Gelb, in his review, comments that Hyatt's texts do not come from as wide a period as that claimed by him (1942, p240).
As the title says, Hyatt is concerned about the spelling and pronunciation of final vowels. He begins by analysing material from sources from outside NB which provide information on the pronunciation of NB and on how the cuneiform signs were used to represent sounds, namely the Graeco-Babyloniaca texts and the Aramaic incantation in cuneiform.

The second chapter deals with final short vowels first, including final vowels which are written “without justification” (his term for CV signs being used for expected final -vC), for example in constructs and names (c, p20). Part two of this section deals with final vowels after geminated consonants and part three, dissimilar consonants (including feminine nouns). He concludes in both cases that the final vowel was dropped.

Chapter 4 deals with final long vowels. By this he means words ending with a historically long vowel, such as plurals of nouns and verbs including those singular verbs with a root ending in a final weak “consonant”. Judging by the number of examples, there is a predominance of Cu-u, Cu- and C- spellings among the plurals of verbs ending in a strong consonant (pages 41-42), rather than the historically usual Cu (p38). However, as there are some examples where a final vowel is not written (b, p37), he concludes on page 44 that “final long vowels were dropped unless there was a psychological reason for retaining (or restoring) them”.

Chapter 5 deals with final “circumfllected vowels”. As well as the vowel contractions seen in final weak verbs and some nouns, he includes vowels included to indicate questions. In his copious examples of verbs and predicative adjectives (statives, 45-49) and nouns and adjectives (49-52), it can be seen that the endings are predominantly CV-V and occasionally Ca-.

His discussion on â and tâ (his transcription of ÂM and TA.ÂM, 52-54), the distributives, is interesting in that in the NB of his study, ÂM (a) is clearly not being used as the demonstrative (â) which is so common from the time of Nbk onward.

His work, although now dated, is lucid and has plenty of examples in transliteration. His conclusions, that final short vowels were not pronounced, and that historically long vowels were not pronounced unless there was a psychological reason for it, and that subjunctives and plurals of final weak verbs and statives were clearly written long, holds good for sixth century NB also.

19 He says their ending is predominantly ti (p34).
c) Woodington’s *Grammar of the NB letters of the Kuyunjik collection* (1982) deals with those letters in the NB dialect found in Nineveh prior to the fall of the Assyrian Empire and is the only really complete grammar of any form of NB. She includes not only letters written to the king by his officials in Babylonia and letters between officials and individuals (from various parts of Babylonia, p2), but also letters written by the king to his officials in Babylonia. She does concede that the letters “are in the standard cultivated language rather than in colloquial or folk speech” (p5). She considers the letters attributed to the kings themselves as worthy of inclusion in her study, although aware that these will not have been written in the author’s native language. The assumed dates of the letters range from not earlier than the reign of Sargon II to not later than 612.

This is a very thorough grammar but its main shortcoming is that the examples are almost always in transcription and amended to follow the case endings, with inflections on verbs and predicatives given as if they were originally SB. This makes it impossible to observe which signs are popular among the scribes. Also, her list of comparisons of the characteristics of the NB in her letters with those characteristics given in GAG §192 would have been far more useful if she had concentrated less on von Soden’s observations and made her own thorough list of characteristics. Not only could she have included those characteristics attributed to Aramaic influence, but also those resulting from contact with NA.

As seen from the title, Streck is concerned with the use of numbers (part one) and verbal system (part two) of the language he calls “spätbabylonisch”, from the period of Npl right down to Seleucid “spB”.

In his introduction, Streck strives to give credibility to “spB” as a language and makes the important point: why should relatives want to write to each other in

---

20 Most of which are also in NB script (“ductus”), but some in NA ductus are listed on page 3. Of the latter, I find that only ABL 269 has a typically Babylonian introduction.
21 Presumably the scribe not the king.
22 Exceptions are agá (43-44), numbers (p75) and doubly weak verbs (145-146).
23 Which were not only very summary, but were first published in 1952 and dealt with NB leading up to 539 B.C.
24 Including the predicative (paris) form. See below.
25 I.e. a period of over 300 years. Streck supports von Soden by calling the non-literary dialect of Npl and later “spätbabylonisch” (spB). He does, however, unexpectedly use a letter from Ashurbanipal, CT 22 1, in his corpus. In these comments on his work I shall use spB when he uses it.
Akkadian if their everyday language is Aramaic? His example is CT 22 40 (p xxiv) but even more appropriate would be CT 22 6.\(^{26}\) On pages xxvii ff. Streck lists all the letters published up to 1992, 1006 in total, having already pointed out (pxxxvi, top) that preference should be given to the letters, whose language should be studied as much as possible.\(^{27}\)

In part one of his work (numbers), items of particular interest are §§17–18, which deal with the polarity of the number one and the fact that some nouns will sometimes be qualified by *ištēn* and sometimes by *ištēt*. This is taken up later in §29ff with copious examples and a discussion on the almost\(^{28}\) complete disappearance of “Genuspolarität” and the appearance of “Genuskongruenz”, i.e. n with masculine referents and n-ta with feminine referents.

In part two (from page 81 onwards) Streck deals with the forms *iparras*, *iprus*, *iptaras* and *paris*. Each form is separated into the various temporal nuances it can convey, e.g. for *iparras* there are modal nuances with a future meaning, examples of which are given by him (94–98) under the headings “sollen, wollen, müssen, können” and “dürfen”. Of particular interest are his observations that *ul iprus* is the negation of *iptaras*,\(^ {29}\) except when *iptaras* is the protasis in a conditional sentence, in which case it is *stådad* to use *la iptaras* (§18a, p120 and §36, p164f). Also, Streck notes that the preterite sometimes replaces the precative, not just in the 1cpl (§25a–g, 127–134).\(^ {30}\)

In a work devoted to numbers and the verbal system, it is somewhat surprising for there to be a large section on the predicative (i.e. non-verbal) form *paris*. Although *paris* is much used in NB to describe ongoing situations and states and to replace a verbal predicate in a verbal phrase, it would seem more appropriate to have made this into a “Part III” of the work, rather than include it with the verbal system, since readers may find such titles as “Nichtverbaler Satz” (§38, p173) confusing.

Of all the works which focus on the NB language, Streck’s is the best researched within its field. Since material from the period 556–500 is included I refer to it

---

\(^{26}\) It is common practice in the letters to address one another as “brother, father, sister” etc. even if the parties are not related, but there is no doubt that the correspondent is writing to relatives in this letter, which IMB sent to his family while he was working abroad. It is of course possible that the sender of the letter dictated its content to a scribe, as no doubt occurred in the majority of cases. However, it is known that in this case the sender was literate and therefore may well have written CT 22 6 himself. See the Note in appendix §41 ii, below.

\(^{27}\) He does not say why, i.e., that the letters are most representative of vernacular Akkadian.

\(^{28}\) See §30, p35.

\(^{29}\) *ul iptaras* does not occur.

\(^{30}\) *Ie. iprus* =*liprus*. 
constantly. What sometimes detracts from its value is that it covers so wide a period within the NB language so that one finds Hellenistic and earlier examples side by side. As noted below in n40, the Hellenistic material is limited in content and its inclusion can be of curiosity value only. There were some innovations in the Seleucid period, however, in the writing of numerical forms.

e) Other contributions to the study of NB

In the 1930s and 1950s Erich Ebeling published transliterations, translations and comments on over 700 letters. The letters are virtually all taken from CT 22, YOS 3, BIN 4, TCL 9, UET 4, TUM 2/3 and GCCI 2. Five letters are presented in the appendix to GINBr (1953), which is a glossary with a comprehensive listing of variant spellings. The letters are largely from the 6th century B.C., although CT 22 1, the Ashurbanipal letter (mentioned above in the comments on Streck) and a letter order dated in the reign of an Artaxerxes (apparently) are included in NBr. In the introduction to NBU, Ebeling states that the letters date from the reigns of Asb to Darius. The almost complete lack of Assyrian names, however, renders it unlikely that any letters come from prior to the reign of Nabopolassar.

Mariano San Nicolò transliterated and translated many NB economic documents, some in collaboration with Arthur Ungnad and others with Herbert Petschow. NRVU consists of translations (with notes and the glossary NRVG1) of about 900 texts whose copies are in VS volumes 3 to 5. The tablets are in the Berlin Museum and all but a few date from the reigns of Npl to Artaxerxes II. Although they are from the Babylon excavations, some are from the regions in and around Uruk. BR 6 (1961) contains similar material in date and place, and includes transliterations. BR 8/7 (1951) is unique in that it is a collection of transliterations and translations of NB texts from the 8th and 7th centuries B.C.

More recently, material has been published by Joannès (129 texts, mostly Npl–Dar III in TEBR, 1982), Shiff (228 texts, 1987) and Wunsch (387 texts in transliteration and translation, 1993, volume 2). Both Shiff and Wunsch concentrate on the archives of the Nūr-Sīn family, and in particular the transactions of its main representative Iddin-Marduk. The texts, from Babylon, the environs thereof and

---

31 For instance, I am unable to appreciate the value of the point made in §36c, p163, using two examples, one from CT 22 1, the letter from Asb, and the other from a text dated SE year 116.
32 NBU (1931–4) covers Uruk and NBBR(1951) covers Babylon, Sippar and elsewhere.
33 NRVU (1935).
35 Volume 1 has previously unpublished texts in copy (pp90–140).
Šahrīnu, run from Nbk to Darius I. Further material can also be found in Cocquerillat (1968), Salonen (1976), Giovinazzo (1987) and the recently published MacGinnis (1995)\(^{36}\). Other still useful collections of transliterations and translations are in Dougherty (\textit{Shirkātu}, 1923) and Moore (1935)\(^{37}\).

Muhammad Dandamaev’s \textit{Slavery in Babylonia} (\textit{Slavery}, 1984) has many texts in transliteration and translation. His short “Neo-Babylonian archives” (1983, mentioned above) discusses the distribution and numbers of documents and letters within the NB archives. In \textit{Slavery} (7–18), a full list of published documents from Npl to Dar III is given.\(^{38}\)

\textit{Reasons for choosing the NB of the period 556–500}

It is surprising that the grammar of the NB of this period has not so far been studied, particularly as this might be expected to be a very dynamic stage\(^{39}\) in Akkadian’s last outpost. Before I discuss this, it should be noted that there are other convenient concentrations of material within NB which would also seem to be ideal corpora for grammatical studies. The first of these has already been analysed by Woodington:

a) Hundreds of letters were found in Kuyunjik written in NB during NA times, from Sargon II to the end of the 7th century B.C.

b) Considerable material becomes available in the 6th century with Nbk, the highest concentration being in Nbn’s reign. Sippar, Uruk and Babylon provide the largest amounts of material.

c) While less is available from the beginning of the 5th century, the latter half of the 5th century is dominated by the (approximately) 730 known texts from the archives of the Murašu family of Nippur. The texts’ range of dates falls from 440 to 417 B.C., with their main concentration occurring in the middle half of that period. They were all kept in a single room and their contents are discussed by Stolper (1985, 18–35) who gives copies, transliterations and translations of many texts. As expected from a money-lending and property-leasing concern, they consist mostly of leases and loans.

\(^{36}\) Which contains new material from Sippar.
\(^{37}\) Which consists of transliterations and translations of the texts in TCL 12 and 13.
\(^{38}\) In addition, Dandamaev says there are 250 published texts prior to 626 B.C. and 380 from the post-Achaemenid period (all up to the time of writing, March 1983). He has also written a number of books and papers on the political situation in sixth century and Achaemenid Babylonia and the Near East.
\(^{39}\) The Persian conquest of Babylonia took place in 539 B.C.
d) There is Seleucid and Hellenistic material from Uruk but as this is rather limited in scope it may not provide much of grammatical interest. It is highly unlikely that NB was a living language by this time.\(^{40}\)

A statement by von Soden may offer an explanation for the lack of interest in NB grammar:

(In spite of the forced archaisms in royal and literary works) “wird es immer mehr zu einer babylonisch-aramäischen Mischsprache, die nur Schrift- und Gelehrten-sprache ist, während das Volk aramäisch spricht. Der sprachliche Verfall ist auf allen Gebieten spürbar” (GAG §2 h)\(^{i,e,}\) von Soden thinks that the people in general spoke Aramaic, while later Babylonian remained only as a written language used by scribes and specialists. As NB died out, Aramaic continued to influence it more and more. If these were\(^{41}\) the views of an influential scholar such as von Soden, it is easy to see how grammarians could be discouraged from studying Babylonian in its late stages, especially when its diversity of spellings gave the impression that it no longer cohered as a language and therefore no longer warranted attention as a productive, living language.\(^{42}\)

*Choice of texts and their date*

Texts limited to Uruk and Babylon and their immediate environs have been chosen for the following reasons. Since so many texts from the period in question have been found in these two cities, the main reason for the choice is simply a matter of convenience. This has the added advantage that, with Uruk and Babylon being (roughly)\(^{43}\) at opposite ends of Babylonia, their separate dialects should be discernible and, bearing in mind the distance between them, any features common to both dialects may therefore apply to the whole of the country. A grammar laying out the common features in two such widely separated cities should still be of use to scholars working on material from other sites. Idiosyncratic features from either of the two cities should also be noted since they may not be exclusive to the Babylon or Uruk dialects; they could also help to preclude the incorrect assignment of material

\(^{40}\) In the introduction to the large number of texts copied and studied by McEwan in OECT 9, he notes that their content was limited almost exclusively to sales or gifts of slaves, houses and prebend rights. There is also the execution of a will. He assumes that other matters were recorded on parchment or papyrus, for which only the clay bullae used to seal these documents remain. Oelsner states that up to 300 Seleucid non-literary documents have been published and almost as many (including two letters) are known which have not been published (1986, p155 and p162).

\(^{41}\) Although it is perhaps unfair to hold him to views he expressed in 1969.

\(^{42}\) This prejudice against NB, also referred to by Oppenheim (1967, p43) is tackled by Streck in his introduction (1995, pxxiif).

\(^{43}\) About 120 miles apart.
of unknown provenance.\textsuperscript{44} There is always the problem of determining whether rarely occurring features are normal for the dialect of an area or not. As they may be more common in other places, I have included them in the study, in anticipation of more material becoming available.

Secondly, in any grammatical study of vernacular Akkadian, the most useful texts are the letters, since they are most likely to represent the vernacular Akkadian. However, they can only be useful if they can be dated. As far as sixth century NB is concerned, outnumbering the letters by far are the economic documents, of which the longer ones are often useful for the study of the language and nearly always have their date (exact to the day) and location recorded on them. The witnesses and scribe are usually given, who, by the mid-sixth century, are virtually always being identified by father and family.\textsuperscript{45} This means that prosopographical details from these documents have enabled some of the people in the letters to be identified as well, so that many of the letters mentioning them can be roughly dated.\textsuperscript{46} I have therefore been able to include 69 letters from the latter half of the sixth century in this study.

Thirdly, the constraints imposed on doctoral research render it impossible to cover the many thousands of texts from the NB period, even if only the material from Babylon and Uruk is used. The same constraints force me to make a decision (which may prove to be inspirational?): to limit the timespan to 56 years and for the first time make it possible to give a grammatical description of quite a short phase of Akkadian where chronological changes may not weaken the evidence so much as in the cases of the NB of Hyatt, Streck, or even Woodington.

For us, the final half of the sixth century has the added attraction that it witnessed the Achaemenid conquest, when Cyrus took Babylonia in 539 B.C. Judging by the written records of day to day, the Old Persian (OP) language had little impact in Babylonia; it will be seen that OP loan words were limited to terms relating mainly to the administration. Only a few OP names appear in the sixth century texts. However, the language used by the Achaemenids to liaise with their subjects in the Ancient Near East was Aramaic. It is significant that this language was chosen, as it

\textsuperscript{44} The different nature of the Babylon and Uruk texts does make it difficult to determine idiosyncratic features. However, some do exist; see part 3 §3.

\textsuperscript{45} This pattern had become the norm during the reign of Nbk, although it had been sporadically used considerably earlier. See BR 8/7 p2f n1 and part 1 V §3b and the use of the proleptic suffix in recording a person's name.

\textsuperscript{46} Some may even be dated to within a year, exx. CT 22 127, YOS 3 126, TCL 9 98 *JNES* 1993. See the discussions on the dating of the letters in appendix §4.
indicates that it was the language most accessible to the people in the Near East at that time. 47

Comments on the historical background: tribal groups of Babylonia in the sixth century B.C.

The texts in question contain no references to tribal matters. 48 It seems that by this time the tribal factions which had caused so much trouble against the Assyrians in previous centuries had amalgamated into a general population known as Babylonians, 50 so that the identification of people in documents by their tribes, whether Aramaean or Chaldean, no longer occurs. As stated above, by the mid-sixth century people are being identified by their father and then a family name, which is often that of an ancestor or a profession, e.g. Egibi, Nūr-Sīn, Nappāhu, Ša-tābtišu, Rabbani, Dābibī, Eppes-ilī, Ekur-zakir, Sīn-damāqu, etc. This may be due to population increases; the members of the Aramaean tribes had probably also become too numerous for identification by tribe alone 51 and the Chaldean tribes were already large and identification by tribe alone could not have been practical by the sixth century. It should also be noted that most of the names are Babylonian. 52

[The texts in my corpora have little reference to ethnic minorities. However, there are many records of Egyptians in Babylonia, usually as free people or as temple slaves. 53 Persian and Hebrew names become more common, especially in the fifth century and later.] 54

---

47 According to Beyer (1987, transl. Healey, 13–14) it was already the lingua franca in the Near East in the eighth century B.C. and certainly by the seventh.
48 Tribes are usually referred to as bit PN or bit mārē PN. The fact that they are no longer used in the identification of people and that there are so many different family names suggests that the family names used for identity are subgroups within the original tribes, so that bit PN referred to families rather than tribes; cf. the legal clause exemplified by Dalley 75: 27–29 ma-ti-ma ina ŠEŠ.MEŠ.DUMU.MEŠ kim-tu, nē-su-tu à IM.RIA šā E DUMU =ZALAG–50 šā i-rā-gu-mu um-ma... “if (ever there is) one from the siblings, children, distant kith and kin of the Nūr-Sīn family who makes the following claim...” (Dar yr 3, B).
49 In (1969 = PKB) and (1977), Brinkman writes about the appearance of Aramaeans in western Babylonia and their skirmishes against the Assyrians from the 12th century B.C. onwards. There were more than 35 tribes in and around Assyria in late Assyrian times (1977, p30ff). The Chaldeans, five tribes (1977, 306), came to southern Babylonia in the 9th century B.C. See PKB (260–285).
50 𒋀anna māt Akkadi in the Babylonian chronicles.
52 As opposed to West Semitic or otherwise.
53 Material containing new lists of rations for Egyptian širkus in Sippar (Nebuchadnezzar yr 15) has recently been published by Bongenaar and Haring (1994, with a good bibliography). Eph'al has compiled a list of people all with the family name nMširayya, from Šamaš-sum-ukin to Nbk. All have Babylonian names (1978, p77f). The family name continues beyond the conquest of Egypt by Cambyses in 525 B.C (cf. the scribe of Camb 349). Dandamayev refers to Egyptians with Babylonian names in (1992).
54 Notably in the Murash archive from Nippur. See Zadok (1976, 1988 and 1995). In (1976) Zadok indicates that the family names Kurī and Hunzū are Kassite (p65) and that Ašgandu is
Range of documents included in this study.

The contents of the Babylon and Uruk corpora are quite distinct. Many of the Babylon texts are from the Egibi and Nūr-Sūn family archives and it can be assumed that these wealthy families were important in Babylonian society during the period in question.\(^{55}\) The letters involve members of these families and their slaves. As for Uruk, its most powerful body was the Eanna temple administration, so that the Uruk texts and letters largely refer to Eanna affairs, the activities of the temple slaves (širkus) and the farmers who work the vast Eanna estates.

Another point to consider in comparing the corpora is that there is a dearth of material from Uruk after year 2 of Darius' reign. Although the early years of his reign are known to have been disrupted, there is no reason to expect that documents recording day to day affairs were no longer being written. Realistically, the reduction in the number of cuneiform records on clay must be due to increasing numbers of records being made in Aramaic on materials other than clay (cf. Oppenheim, 1985, p570f). An observation by both K. Kessler and P-A.Beaulieu (personal communication) is that material almost certainly exists but is as yet either unexcavated or unpublished.\(^{56}\)

Aside from the letters, the documents on which this study is based fall mainly into the following categories:

a) Sales. The document records the item(s) and the agreed price and circumstances of the payment. Sometimes, as well as an agreed price, the purchaser pays an atru, an extra payment (and sometimes adds a garment "u lubāru" for the seller's wife).

b) Loans, i.e., records of loans with their repayment dates and descriptions of items pledged as collateral. Guarantees are often included to say that items pledged actually do belong to the borrower. The creditor and debtor make out (eʾēlu) a document (uʾīltu which, for convenience, I translate as "IOU") between them, stating the circumstances of the loan.\(^{57}\) Parties may also have to swear that they will repay the loan by a certain time.

\(^{55}\) Further excavations may reveal further families.

\(^{56}\) Kessler has confirmed that he is working on a private archive of the Egibi family (Uruk branch). There are about 220 texts from Cyrus to Darius (yr 33). 80% of the material comes from the reign of Darius. He hopes to publish the material, which includes a letter from a woman, along with about a dozen Eanna texts from the same period, in 1997.

\(^{57}\) If both of the two parties have a copy then it should also be a "you-owe-me" as well. Contrast OECT 10 105: 9-13, and Nbn 832: 12-15, where two copies are referred to, with most other documents, where usually only one is mentioned. uʾīltu is usually translated "pro-
c) Division or letting of property:

i) Exchange (ṣupēltu)\(^5\)\(^8\) of property. These involve exchanges of housing and land with monetary supplementation if the parts are not equal.

ii) Contracts involving the letting of property. These lay down the terms of the lease and the collateral (maškanu), and often the tenant has to give a bonus to the landlord (nūptu ināp).

d) Work contracts:

i) Prebends, referring to religious duties undertaken at specific times. The carrying out (ĕpišānūtu) of some prebends involves ritual shaving (gullubu). pappasu rations supplied to the incumbents are related to their duty, i.e. flour or dates to bakers, gold to goldsmiths, etc.

ii) Other jobs, such as state duties which the incumbent may pass onto an urāšu, a paid stand-in, to do. For building plots the stretch on which the work is to be carried out is often called mīḫu (AHw p660b).

e) Juridical:

i) Cautions and descriptions of punishments for (future) crimes.

ii) Descriptions of legal cases in which a party has given wrong evidence. The statements are recorded both before and after the party has sworn an oath.

---

\(^5\) This spelling, as opposed to ṣupēltu (root, p'1), is chosen on the basis of bēlū, tēmu, šēdu etc., as all three had ' as the middle radical in PSem.
Part 1: Syntax and Morphology

Chapter I: Main clauses

§1 Verbless clauses

a) Subject-predicate juxtaposition:

Generally, in the Semitic languages the juxtaposition of two nominal forms AB in a single phrase unit is to be translated as "A is B". In Akkadian AB may also be "A was B" or "A will be B":

KU.BABBAR re-he-et i-di E-sū “the money is the balance of house-rent”, Camb 253: 10–11 (yr 4, B) cf. Dar 494: 18–19

um-ma a-na-ku LÚ.ūš-ku-ū-ka “I am your guarantor”, TCL 13 222: 13 (Dar yr 1, U)

The predicate may be pronominal:

UDU.NĪTA ul at-tu-ū-a “the sheep was not mine”, CY 22 82: 10 (letter, after Dar yr 14, B)

a-nur lba-ti-il ina SUM.SAR 10-ū ša DN at-tu-ka ā LÚ.ENGAR.MEŠ-ka a-na MN pa-ni-ia *šu!-di-giš Difficult. “look, there is a stoppage in the garlic which is the tithe of Nergal, (which is) yours, and your farmers are to belong to me (i.e. be my responsibility) for the month of Šabātu” CT 22 8: 5–11 (letter, 545–527, B)

or separated from the subject by other clauses:

u mim-mu ša URU u EDIN ma-la ba-šu-ū maš-ka-nu ša PN “and whatever there is in the city or outside is PN’s pledge”, Nbn 344: 8–9 (yr 9, B)

or adjectival:

KU.BABBAR qa-al-la-al “the silver is inferior”, CT 22 182: 6 (letter, pre-526, B)

b) Prepositional phrases as predicate:

LÚ.DUMU šip-rí šá LUGAL ana UGU dul-lu “the king’s messenger is in charge of the work”, YOS 3 45: 39–40 (letter, Cyr-Camb, U)

ul-tu UD 21.KÁM šá ITLILZÍZ É ina pa-ni-šu “from the 21st day of Šabātu the house is at his disposal”, YOS 7 2: 12 (Cyr acc, U)

1 For the detailed organisation of this principal section, the reader is referred to the table of contents above.
2 Dealt with by Streck in §38 (173–176).
3 The order BA does occur if A is a pronoun. See d, below.
a-mur PN ina pa-ni-ku-nu “see, PN is with you”, YOS 3 52: 10–11 (letter, 538–532, U)

dul-lu šá ka-a-ri...a-na e-pi-šá-nu-tu ina pa-ni PN “the work on the quay is contracted to be done by PN”, VS 6 84: 1...4 (Nbn yr 12, B)

a-kan-na 2 PI ŠE.BAR ū 2 PI ZU.LUM.MA a-na 1 GfN KU.BABBAR...i-qab-bu-ú “here, they say two sūtu of barley or two sūtu of dates is one shekel...”, YOS 3 79: 22...27 (letter, 539–526, U)

c) Indirect object pronouns\textsuperscript{4} may function as predicates:

šu-lum ia-a-ši “(all is) well with me”, YOS 3 2: 4; YOS 3 4: 3 (royal letters, Nbn, U). More vernacular NB had begun to use the subject pronoun in conveying the dative:

šu-lum a-na-ku u a-na mam-ma ma-la it-ti-ia “(all is) well with me and everyone with me”, CT 22 6: 5–6 (letter, Cyr, B), cf. CT 22 194: 6 and also šu-lum a-na-ku u šu-lum a-na PN, in CT 22 151: 5–7 (letters, both B)

Woodington's ABL corpus (p191) gives no examples of the nominative pronoun replacing the dative pronoun; however, she indicates that the dative is restricted in use. šulmu iāši appears in letters throughout her corpus, mainly in royal correspondence.

Note: it is possible for a predicate to exist without a subject:

ma-ti-ma ma-na-ma šā É PN šā i-rag-gu-mu um-ma “if ever there is anyone from PN's kin who complains as follows...”, Dar 227: 25...26 (yr 7, B), cf. the following, which is explained in d i, below:

(umma) šu-ú “’it’s him!’”, CT 22 127: 15–16 (letter, Dar yr 17? B)

d) The pronouns šū, iššū, etc., as predicate or copula

In verbless clauses, when the subject is a personal pronoun on its own, the word order is usually inverted to predicate-subject in normative Akkadian dialects, and the subject comes at the end of its clause. It is particularly common in NB, and, as von Soden states, this is most certainly due to the influence of the Aramaic verb hwā.\textsuperscript{5} la is used for negation.

i) šū, etc. as predicate:

nu-du-nu-á-a šu-ú “he is my dowry”, TCL 13 179: 9 (probably Camb yr 3, U)

šā PN u 1PN šu-ú “it belongs to PN and 1PN” Nbn 85: 13 (yr 2, B)

la at-tu-ku-nu šu-ú “it is not yours”, JAOS 36: 26 (letter, 538–532, B)

\textsuperscript{4} V §3f, below.

\textsuperscript{5} \textit{rn. See Anmerkung} in GAG §126.
a-mat PN ši-i “it is the order of Gubaru”, AnOr 8 43: 15–16 (Cyr yr 5, U)

GÉME ša PN...a-na-ku “I am the slave of PN...”, AnOr 8 56: 5–6 (Cyr yr 7, U)

mi-na-> ina IGl-ka ši-i-ni “why do you have them (fpl)?” JRAS 1926: 8 (Nbn yr 10, B)

Note the interesting ši-i-ti in:

LÚ qal-lat-ta-a ši-i-ti “she is my slave”, CT 22 183: 5 (letter, pre-526, B) This form was not found by Woodington (1982, p27). It is probably influenced by the Aramaic 3fs of hwâ, rather than by the NA 3fs. See also at-ta in line 24.

and the concise:

(um-ma) šu-ū “it’s him!” , CT 22 127: 15–16 (letter, Dar yr 17? B)

šū, etc. as copula:

GABA.RI ú-íl-ti ašar ta-nam-ma-ri šá PN...ši-i “any copy of the IOU wherever it may be noticed, belongs to PN”, OECT 10 105: 11–13 (Nbn yr 9, B), cf. Nbn 832: 12...15: ú-íl-ti gab-ri ú-íl-ti...šá PN ši-i (B)

DUMU šá ɅPN...DUMU.MUNUS-su šá ɅPN, MUNUS šír-ka-tu, šá FDN at-ta “you are the son of ɅPN...the daughter of ɅPN, a širkatu of the Lady-of-Uruk”, YOS 6 224: 10...15 (Nbn yr 15, U)

PN u PN, LÚ.RIG, ME [šá] FDN šá-nu “PN and PN are širkus of the Lady-of-Uruk”, YOS 6 116: 15–16 (Nbn yr 10, U)

PN...ù PN₂ ŠES-shá ra-bu-ú šá iš-te-et AMA šá-nu “PN...and PN₂, his older brother, (who) are of one mother...”, AnOr 8 48: 27 (Cyr yr 5, U)

ɅPN ɅPN₂ ɅPN₃...a-me-lut-tu, la-ta-ni-iš ši-i-ni “PN ɅPN₂ (and) ɅPN₃ are servants of my retinue”, JRAS 1926: 4...5 (Nbn yr 10, B)

The pronominal predicate conveys the past in the following:

ki-ma- Ʌšu-ū “how much was it?”, (referring to past information about the cost of dates and grain), YOS 3 79: 30 (letter, 539–526, U)

and the future in the following:

šá a-na «ina» muh-hi ɅPN PN i-na-áš-šá-a šá ɅPN šu-ū “whatever PN brings (into court) against ɅPN, belongs to ɅPN”, Rutten: 5–6 (Nbn yr 1, B)

[u IM?].DUB.MEŠ u rik-su.MEŠ a-šar in-nam-ma-ru šá NÎ.GA é-an-na šú-nu “any documents or contracts wherever they may be found, belong to Eanna property”, AnOr 8 70: 23 (Camb yr 3, U)

---

6 The gist of this short letter (of which the recipient is PN₂) is: PN...i-q-ta-ba- Ʌum-ma ZU.LUM.MA... um-ma PN i-ta-SI en-na ki-i la-pé-ti um-ma šu-ū EBURU šá ZU.LUM.MA taš-šu-ū ZU.LUM.MA te-ri-ma a-na PN i-di-in “PN...has told me ‘(regarding the) dates...PN₂ has taken them’. So, if (what he said) is true, (i.e.) ‘it’s him’, (regarding?) the date harvest that you took, give the dates back to PN” (lines 5...19).
The idiom ʻahā/ahāt šunu “they are equal partners, they share and share alike” can refer to the future as well as the present:

LÚ-tú ha-liq-tu u mim-ma šá KASKAL. II-šá-nu šá  il-la-a...a-ha šú-nu “lost slave(s) or anything (else) in their business venture which may crop up they are to share and share alike”, TCL 13 160: 13...15 Camb yr 3, B)

mim-ma ma-la ina URU u EDIN ina muh-hi ZU.LUM.MA a’1 ME GUR û ŠE.BAR a, 50 GUR ip-pu-us-šú-2 PN u PN₂, a-ha-ta šú-nu “anything that is made either in the city or in the country on those7 100 kur dates or on those 50 kur barley, PN and PN₂ are to share and share alike”, Dar 395/396: 5–8 (yr 3, B)

mim-ma ma-la...ip-pu-us a-ha-a-ta šú-nu “in whatever...they (!) make they are to share and share alike”, Dar 280: 5...7 (yr 10, B)

In the following the pronoun is the subject of a preceptive nominal clause:

lu-ú DUMU-u-a šu-ú “let him be my (adoptive) son”, CTMMA 2 54+Nbn 380: 8; and also in line 11: lu-ú DUMU ša-bit ŠU.II-i-ni šu-ú “let him be a son to support us” (literally, “who holds our hands”) (yr 9, B)

ii) iššū

The Uruk texts often use a pronoun copula modified by the prefix iš-:

um-ma MUNUS.qal-lat-a iš-šī-i “she is my slave”, AnOr 8 56: 10 (Cyr yr 7, U)8

ina u-šu ina šī-mit it-šāl-ku-2 PN₁, LÚ.<šī>-rik-ki šá FDN iš-šu-ú “when he (PN) dies, PN₁ will become a šīrku of Ištar”. YOS 7 17: 12–14 (Cyr yr 3, U)

šá man-na iš-šū-nu “whose are they?”, TCL 13 181: 8 (Dar yr 2, U)

mim-ma NIG.GA FDN ša-bi-šaš-ši-ki i ú-il-ú ME la at-tu-ú-a iš-šī-ši “there is no property of the Lady-of-Uruk among them; the IOUs are mine” (oath in a broken context), ibid.: 12–14

In a preceptive nominal clause:

ki-i pa-ni-ka ma-hir...šu-bi-lu ū ia-a-nu-ú lu-ú ina IGÎ PN iš-šu-ú “if you want, take him (to work for you). If not, let him be at PN’s disposal”, YOS 7 102: 16–17 (Camb acc, U)

The meaning of the following is unclear:

um-ma a-mur SIG.HI.A iš-šī-ši ina É an-pu šak-na.9 The context suggests the translation “look, there is some wool (assuming šipatu 3fpl) and it is deposited in the dilapidated (??) house”, YOS 7 78: 7 (Cyr yr 7, U)

---

7 See V §3 l, below for the demonstrative a and its variant spellings a’ and a„.
8 Contrast this with CT 22 183: 5 ši-i-ti cited in i, above.
9 Some kind of abandoned building is implied. É an-pu may also be read “house of Aššur".

abtu is the usual adjective describing dilapidated houses. It is better to read e-an-na!
The Uruk corpus has 8 examples, of which 3 have a future or consequential meaning. The Babylon corpus has only the following example:

\textit{um-ma a-tu-\-\-a iš-šu-\-nu} “they are mine”, CT22 74: 10–11 (letter, middle Dar, B)

Oppenheim suggests that this form of the pronoun may come from \textit{in}, an abbreviation of \textit{enna} “behold!” and the copula \textit{šu} (1940, p222). Examples of first or second person forms have not been found.

e) \textit{ia\-nu}

\textit{ia\-nu}, the predication of non-existence, “there is not”, is used interchangeably with the negative stative of the defective verb \textit{išu}.\footnote{Note, though, that it does occur in an earlier text from Babylon: \textit{u LÚ.mu-\-kin-\-nu uk-tin-\-nu-\-uš LÚ.ŝa-ar-\-ri ša PN iš-šu-\-u} “and if a witness convicts him he will (then) be a betrayer of PN”, TCL 12 60: 5–6 (AwM yr 1 = 561 B.C.).} There appears to be no obvious difference in meaning apart from a possibly wider scope for expressing time in the case of \textit{ia\-nu}, which is able to say “there never was/is/will be”.

\textit{mam-ma it-ti-\-ia ia-a-\-nu} “there is no one with me”, TCL 9 79: 13 (letter, Nbn? U), cf. lines 29–31.

\textit{na-da-a-\-nu ša TŪG.BAR.DUL...ia-a-\-nu al-la 1-šu a-na tar-ši} RN “there never was a donation of a \textit{kusšu} garment...except once in the reign of Nbk”, YOS 6 71: 28...29 (Nbn yr 6, U)

\textit{EN.ME-e-a lu-u i-du-\-\-u ša ul-tu u-bi-mu ša ni-il-liki!...u-bi-mu pa-tu-\-\-u ia-a-\-nu} “my lords do know that since we went there has not been a day off”, YOS 3 113: 24...26 (letter, early Cyrus, U)\footnote{Cf. YOS 3 69: 12–14 in III §2 i i, below.}

\textit{PN mim-mu ša ik-ka-lu ia-a-\-nu u pa-ni-šu bi-šu-\-u} “PN has nothing to eat and he looks bad”, TCL 9 129: 15–17 (letter, early Camb? U)

\textit{ra-šu-ut-su e-lat an-na UGU PN ia-a-\-nu} “there will be no claim apart from this against PN”, VS 4 114: 8–9 (Dar yr 7, B), cf. VS 6 127: 3–4 (Dar yr 11, B)

The Babylon texts regularly use the following legal phrase:

\textit{i-di a-me-lu-tiit ia-a-\-nu} \textit{u UR 5.RA KU.BABBAR iia-a-\-nu} “there is no wage or interest to pay”, VS 4 60: 9–10 (Cyr yr 3, B) Similar examples are in Camb 379: 6–7, Cyr 177: 8–10 and VS 4 66: 7 (all B)

\textit{ul//la isti} occurs only in the texts from the Babylon corpus. See the discussion and examples in Note at the end of §2, below.

\textit{PN is-su-u “and if a witness convicts him he will (then) be a betrayer of PN”, TCL 12 60: 5–6 (AwM yr 1 = 561 B.C.).}

\textit{ul//la išu} occurs only in the texts from the Babylon corpus. See the discussion and examples in Note at the end of §2, below.
§2 Predicative verbal adjectives (the "stative" or "permansive"): i.e. verbless clauses involving *paris/parvs* predicative forms

The terms "verbless clauses" and *paris/parvs* are both taken from the works of J. Huehnergard. His preference for "verbless" as opposed to "nominal" or "non verbal" is explained in (1986) p219, especially n3.13 Streck14 (1995) uses the term "nichtverbaler Satz" (p186). *paris/parvs* forms are what the older grammars called "permansives" and what the newer ones usually call "statives". The misapprehension that they are verbal forms was laid to rest by the study of Buccellati "An interpretation of the Akkadian Stative as a nominal sentence" (=1968). Since then, works by Kraus,15 Huehnergard, and a later study by Buccellati have followed suit. However, since a satisfactory replacement for the old terminology has yet to take hold, I shall follow Huehnergard at present, as well as continuing to use the convenient term "stative" when it is appropriate. "Stative" became and continues to be popular as a result of its use in GAG, §77.

*paris* and *parvs* forms are much used in NB and will be examined in detail. A brief summary of some of the earlier studies on the stative in Akkadian and their findings as regards our understanding of the stative in NB will be useful at this point.16

1: Rowton (1962)

This is a thorough and lengthy study based on 451 examples, which, in spite of the title, gives material in most dialects including NA and NB [cf. NB no. 147; and NB (ABL) nos. 164, 399]. Although some of Rowton's observations are now considered out of date, others are helpful in our understanding of statives.

On p234a he describes the stative as a tense (sic) "which is used to speak of verbs of state as the outcome of past actions". Note, though, that on p236b he says, "the permansive as a genuine tense of the verb is not very common.... Thus in adjectival verbs the permansive is not really a tense of the verb, it is a *verbal adjective in predicative form*." [italics mine]

p235: In discussing the terminology, Rowton says the stative has a tendency to become a perfect when it speaks of an active condition. His examples are on 292b–

---

13 Huehnergard classifies the various types of verbless clause (i.e. prepositional clauses, noun phrases and statives) on p220f.
14 See his classifications below.
16 My own observations are given in [brackets].
294a. The active permansive, as he calls it, is common only in four verbs, šabātu, leqū, mahāru and našū (p235b) and largely confined to OB and SB. In discussing the last three verbs (p243b), he says mahir “he has received” is normally used as the present perfect instead of imtahar in OB and SB. [mahir for imtahar is particularly common in NB.]

263b–271.: Section III “The descriptive permansive”, part 2, deals with “neuter verbs”, a term he uses instead of the more usual “stative verb” [verb describing a state], and splits into the following groups:

i) verbs of adjectives (p264a) = damiq, arik, gašir (“it is good, it is tall/long, he is powerful”) [i.e. coming from a verb of state or attribute.]

ii) verbs of external state = (w)asib, mit, salil (“he sits, he is dead, he sleeps”)

iii) verbs of internal state = zeni, takil, palih (“he is angry, he trusts, he fears/venerates”). Most of these verbs are intransitive [cf. ap-lah-ma um-ma Dumu ba-ni-i a-na-ku “I took fright — I am a free man” Nbn 1113: 18 (after yr 7, B)] but their statives may take a direct object, cf. bēlī palhāku “I venerate my master”.

278b–285a: Section V deals with the use of the stative as a passive and the criteria for deciding whether to use an N preterite or a stative. Rowton observes that the choice is based on whether the past event which is being recorded still affects the present situation or not, and whether it affects the speaker. The N preterite is used if the past event’s effects do not concern the speaker. parīs is used when the event continues to have an essential effect on the present (p284b).

2: Buccellati (1968)

The significance of this paper can be seen immediately from the title (“An interpretation of the stative as a nominal sentence”), in that Buccellati is making a radical departure from the earlier view that the stative is a verbal tense. Although most of his observations are based on OB, the following points are significant vis-à-vis NB:

Those third person forms which are derived from verbal adjectives [i.e. not from nouns, as in šar, from šarru, “he is (a) king”] are able to take the modal endings of the ventive. Those based on nominal forms are not able to take ventive endings in OB because they already have pronominal endings (i.e. šar is šar+_NAMESPACE; šarrāku is šar+āku). The third person pronominal ending is -0. [Plurals are not discussed.]
later Akkadian (p9) the status absolutus\(^{17}\) which is used for the predicate is replaced by the status rectus. This had already occurred prior to the time of NB.\(^{18}\)

Earlier Akkadian used šarrāku/ (ṣū) šar in preference to šarrum anāku/ šū (p7). The presence of the pronoun copula in the normal state (or status rectus as it is called by von Soden), rather than the noun in the absolute state is probably due to West Semitic influence, e.g. šihru atta "you are a child" (p9). [Rather little is made of this by Buccellati. The growth in popularity of the pronoun copula in NB (and in NA)\(^{19}\) is probably due to the influence of the Aramaic verb, "to be", hwh. See §I, above. The growth may have coincided with the loss of differentiation between the predicative (absolutus) state and the normal (rectus) state as a result of the loss of the case endings (p9, n4).]

3: Huehnergard

[My observations are made using his two articles (1986, 1987), but mainly the latter.]

At the time of writing of (1986), Huehnergard was still in the process of formulating the terminology which he introduces in (1987). For example, on p221 of (1986) and in n11 he still uses the convenient term “stative” (and later apologises for using it) for want of a better word. Huehnergard attempts to break down the use of the paris forms into far fewer and more comprehensive categories than do Rowton or Kraus. Syntactically the noun-based non-transitive (ṣar/šarrāku) constructions are identical to the adjective-based parvs and paris forms. For this reason, Huehnegard categorises sunu sarrū "they are deceitful" (i.e. "liars"), together with rapaš “it is wide”, and bani...\(^{20}\) “does it seem right...?” (1989, p258).

Brief breakdown of (1987):

Here, Huehnergard introduces the reader to the paradigmatic terms paris/parsāku and parvs/parsāku [as found in (1986)] and the difficulty surrounding their classification. The implication is that the former group is transitive and the latter is non-transitive — "i.e. all others including nominal forms" (p220).

\(^{17}\) "Predicative state" was an alternative term used by Buccellati (p5). Earlier versions of this term are given in his table 1 (p4).

\(^{18}\) The exception is the frozen form lū šulum ana... “health be to...”, referred to in Woodington (§§2, p194) and a, below. Since it is an exception and would no longer be recognised as such, Woodington does not acknowledge it as a status absolutus.

\(^{19}\) In the earlier Assyrian dialects, as well as in NA, it regularly takes the subjunctive suffix -ni.

\(^{20}\) bani akanna ana pā<ni>i kal iānu karānū “does it seem right to you like this, that there are no vineyards?”.
i) *pars/parsāku* refers to forms describing a quality or attribute, forms which are in the “predicative state” (p220). Their equivalent finite verbs have non-active “adjectival stative” roots (p221). Their verbal and adjectival stative roots are semantically identical.

ii) Huehnergard chooses three semantic categories for the non noun-based roots, which he introduces on p225:

1) Stative (non active, adjectival stative). The adjectives are “simply descriptive”.

Examples: *damiq* (*damāqu*), “is good”; *rapas* (*rapāṣu*), “is wide”; *lemun* (*lemēnu*), “is evil”, *maruṣ* (*marāṣu*), “is ill”.

2) Active intransitive roots, whose adjectives are resultative.

Examples (p221): *asib* (*ašābu*), “is resident”; *haliq* (*halāqu*), “is missing”; *tebi* (*tebū*), “is standing”; *kaṣid* (*kaṣādū*), “has arrived”. [It is not clear if this group includes common verbs such as *ašū*, *bašū*, *atāru*, *maṭū*, *mādu*, etc., which are much used in predicative form in NB. Also, *kaṣādū* can be transitive, “to reach a goal, to conquer an object”, as discussed on p226, and it can have passive meaning, see 3, below. Examples of other verbs which can function either transitively or intransitively would have been very useful here, such as *šebū*, *bakū* and *šasū*. See my observations below.]

3) Huehnergard’s section E (p228f) deals with active transitive verbs whose adjectives are passive, for example *šabit* (*šabātu*), “he was caught”. [This is his only example. *kaṣid*, “he was defeated” and *hepāt* “it (f) was broken”, would fit here. This is a common use of the predicative form in NB.]

iii) On p228 he discusses the transitive *paris* [I see no reason to repeat *parsāku* throughout.] which he calls an “innovative contrast”, i.e. passive forms developing the ability to function actively, so that *šabit* can also mean “he takes/has”, *našī*, “he has/holds”, *mahir/leqi*, “he is in receipt of”. These are not used as predicative adjectives because they have an object, what he calls the “nonfientic counterpart of the transitive finite forms” (top, p229). [In spite of Huehnergard’s calling transitive *paris* an “innovative contrast”, these active “statives” were already used in OB. (See Rowton’s examples 429–432 and 438–443 on pages 293f, to which I have referred above). They are also common in NB. See c ii, below.]

---

21 I.e. using the same term as Buccellati did, rather than “status absolutus”.

24
On page 229 (section F) Huehnergard begins his reappraisal of the terminology of the *parvs* and *paris* forms:

1) “Stative” should be retained as a lexical designation only, i.e. to refer only to those forms denoting a state or condition [or attribute?], what he calls adjectival roots like *d-n-n*, *r-p-š*, *t-y-b*.

2) “Predicative construction” or “predicative form” are the simplest labels for the non-transitive forms. Syntactically, both *šar*/*šarrāku* and *paris*/*parsāku* [to be read *parvs*/*parsāku*, surely (middle, p230)] consist of a nominal or adjectival base (which cannot have any modifier such as a gender or plural marker) immediately followed by a pronominal subject (p230f). [This explains why Huehnergard saw no need to make separate provisions for the purely noun-based roots.]

Morphologically *šar* and *parvs* can be classified under nominal morphology or under personal pronoun morphology. [Streck (§39f 2, p182) is sceptical about Huehnergard’s observation that the enclitic pronoun endings should be accepted as allomorphs of their independent forms because of the lack of resemblance between their respective third person forms. Kraus has already pointed out that the enclitic pronoun endings are demonstrative pronouns in origin anyway (Huehnergard, 1987, p221).]

As for those verbal adjectives which function verbally [for example, in NB, having ventive, accusative or dative suffixes] Huehnergard wants to see them categorised as “predicative adjectives in verbless clauses” (p231). This includes those verbal adjectives which are translated as a passive and also the active forms represented by *našī*, *sabit*. For these, he chooses the name “pseudo-verb” because of their “morphosyntactic mimicry of true verbs” (end of main text, p232).

4: Buccellati (1988)

One of the main concerns of this paper is terminology. Buccellati is happy to retain terms such as “nominal sentence” (p154), “permansive” (e.g. p176) and “stative” (e.g. p160) although the boundaries between the last two are initially not very clear. On p160 he says that the term “stative” can continue to be used since “the fientive [his term for the fientic i.e. verbal form] expresses a relationship of the subject to the time sequence while the stative does not”. The picture becomes more clear

---

22 I do not aim to discuss the origins of the suffixes on the forms in question, or the possibility that independent third person pronouns corresponding to *šanāku*, *šanta* etc. existed in Proto-Semitic and were later replaced by *šā*, *šī* etc. (1987, p222, top).
when he says (p180) that the permansive is used for the predicative nominal form bound with suffix pronouns [e.g. šar(r)-āku] “which is reserved exclusively for the expression of state, although the reverse does not obtain (i.e. not all expressions of state require a permansive)”. [That is his definition of “permansive”. He uses this definition on p183 when he says that the permansive of the participle is rare in Akkadian but not so in some of the other Semitic languages.23]

This is only a small part of Buccellati’s paper, other parts of which deal with such features as determination (p173f), subordination (p175) and the individual ways of English and Akkadian in expressing state. On p182 he makes a valid point that “stative” roots do occur in the fientive, generally with ingressive value.24 [It is a little confusing that Buccellati refers to “stative” roots (165–168), referring to state, exx. damāqu, marāsu, and then refers to “stative sentences” i.e. nominal or verbless clauses (p180).]

Since Streck is concerned with “Verbalsystem” and, therefore, the expression of “tense” in spB [sic], he avoids classifying what he calls “nichtverbale Sätze” in terms of their morphosyntactic functions but instead concentrates on the range of tenses within which they can operate. Note the divisions in his presentation of material:

§37 paris. This heading is in keeping with earlier headings in his thesis, iparras, iprus, and iptaras. In §37b (p166) he says that paris forms have a static, not a dynamic, “Aktionsart”.25 Sections e–j deal with paris’s various representations of tense: present, past, future, continuing process, iterative [he gives two examples, which are indistinguishable from the present] and “Vertauschbarkeit”, referring to verbs such as bašū and edū whose present forms function to convey state and are therefore interchangeable with their paris forms.

paris und nichtverbaler Satz (§39, 177–188) is primarily a review of previous sources.

---

23 [By “permansive of the participle”, Buccellati means a participle being used as a predicate.] See for example Kienast’s study on a present day East Aramaic dialect in which the participle and personal pronoun used together have replaced the standard Semitic prefix-conjugation verbal form (1980). The use of a participle as a predicate is also a common feature in Modern Literary Arabic.
24 Exx. idammiq “he becomes good”, imrus “he became ill”.
25 Not to be confused with English “aspect”, i.e. imperfective aspect (referring to state), as opposed to a perfective aspect. Buccellati (1988, p161) translates Aktionsart as “dimension”, either punctual or durative.
parvs and pariv forms in the NB under analysis here

From the above discussions it is possible to conclude that the so-called “stative” in Akkadian can be broken down into at least three categories, two of which are amply represented in the NB of this thesis. Indeterminacy of temporal reference applies to all these groups.

a) The purely nominal, predicative forms ūr šar “he is a liar”; šarrāku “I am king”, etc. seen in OB and other early dialects have been replaced in NB by the use of the pronoun copula in all cases except for the construction lô + subject case of a noun (or the predicative form of a verbal adjective, see below) in the idiom ši-pîr-ta-a lu-u LŪ.mu-kin-nu “may my letter be a witness”, YOS 7 102: 24 (Camb acc, U), and as part of the greeting in royal letters in the formula lô šulum ana... “health be to...” (GINBr p119f.).

b) Non-active, i.e. describing a state or an attribute, therefore parvs, stative, or predicative adjective. Semantically their equivalent verbs are intransitive, and sometimes with ingressive value, such as damāq, ašābu, atāru, tābu, lemēnu, baṣū, mādū etc.:

lu-u ti-i-de dul-lu ina UGU-ia da-a-nu “you must know (that) the work is (too) hard for me”, YOS 3 33: 4–5 (letter, early Cyr, U)

LŪ.HUN.GA.ME a-na ŠUK.HLA sa-an-qu-2 “the hired men are in need of rations”, ibid.: 34

KŪ.BABBAR a,šā ina ŠU.II PN ba-šā-2 “that silver, which was in PN’s possession” (note the past meaning), TCL 13 132: 14–15 (Cyr yr 4, U)

(umma) ŠES.MEŠ-ku-nu û LŪ.ERĪN.MEŠ-ku-nu ša a-na ma-aš-ṣar-tu,..ma-bu,– ina muh-hi ŠE.BAR pi-iq-da-1 “your brothers or your workmen who are fit to do the watch, put them in charge of the barley”, TCL 13 152: 14–16 (Camb yr 2, U)

at-ta ik-ki-ka ku-ru-ka û a-na-ku ik-ka-a ku-ru 29 “your patience is short (for you?) and me, my patience is short”, YOS 3 69: 21–23 (letter, 539–526, U)

lib-bi ša AMA-ia lu-ū ta-abb-śā “may my mother’s heart be pleased”, YOS 3 22: 18–19 (letter, early Nbn, U), cf. the royal letters YOS 3 2: 5–6, and YOS 3 4: 4–5, which have lib-ba-ku-nu lu-u ta-abb-ku-nu-ši and lib-ba-ka lu ta-abb-ka, respectively. (letters, end Nbn, U)

26 In fact a frozen status absolutus, as noted in the comments on Buccellati (1968). lū šulum ana... is not found in the texts of this thesis. For lû as a copula, see §5 b i, below...

27 I.e. not “predicative verbal adjective”. If a predicative adjective describes a state it is not verbal. An example of a predicative adjective for which no verb exists is: KŪ.BABBAR qa-a-lal-á-dal (ša a-na ZŪ.LUM.MA in-na-din) “the silver is (too) inferior (for it to be given for the dates)”, CT 22 182: 6–8 (letter, pre-526, B).

28 Cf. the common mala baṣū, “whatever there is/has been/is may be”.

29 An idiom consisting of ikku, “mood, irritability”, and karū D. “to become short”. ikku arāku means the opposite, i.e. “to be patient”, cf. YOS 3 83: 19.
The odd word order is discussed in §3 c ii, below. The final word is unlikely to be from bašū as this would usually be in the singular, ba-šu-u, or finite, i-ba-āš-šu-ū (usual spellings).

31 My interpretation of ma-a-du-∅ ub-ba-lu in the copy, x n kaspa ubbal means “x is worth n silver” in NB (CAD abalu A 5b d’, p20).

32 In letters, subordinates addressing superiors usually use the term “EN” and the third person rather than 2sg. I translate EN as “Sir” for convenience. However, as EN is used to address a woman in CT 22 200 it may be a polite neutral third person pronoun, cf. Spanish “usted”. (Women superiors are normally addressed “AMA”:)

33 See also 30–31 (pānī...band). This letter contains several further examples of parvs and paris forms; see lines 8, 10, 26, 28 (šā-an-nu-∅ “is repeated”, D passive?), and 36.
Nana and a second inscription below the first inscription is written to Innin of Unuk'', RA 67: 22...25 (Nbn yr 17, B)

ri-ka-su ša IR-ú-tu ša PN ša ul-tu MU 35.KÁM RN...a-di MU 7.KÁM RN...a-na KÚ.BABBAR na-ad-nu a-na maš-ka-nu šak-nu a-na nu-dun-né-e a-na 'PN...na-ad-nu ... šis-tas-su-ú-ma "the contract covering the slave status of PN, (showing that) from year 35 of Nbk to year 7 of Nbn he had been sold for silver (then) given as a pledge (and then) given as a dowry to PN... was read out" ... (literally "they read out" — impersonal subject) Nbn 1113: 7...14 (Nbn, after yr 7, B)

(women slaves and their children) šà a-na KÚ.BABBAR1 ab-ka-an "who were led away for money", Dar 379: 24 (yr 14, B) (ventive)

2 še-e-ru...šà ul-tu É PN ab-ka-na "two sheep/goats which were led from the house of PN", TCL 13 132: 1...3 (Cyr yr 4, U) (ventive)

(isqu) šà a-na NÍ.G.GA LUGAL ma-nu-ú "(a prebend) which is assigned to the royal treasury", YOS 7 79: 2 (Cyr yr 8, U)

hu-us-su sa it-ti E ka-a-ri te-pu-u "a reed hut that is built onto the house", Nbn 499: 18–19 (yr 11, B)

| MA.NA KÚ.BABBAR ba-ab-tu, 1 MA.NA KÚ.BABBAR PN <a-na> PN, i-nam-din-ma nu-dun-na-šu a-pil "PN is to give the remaining balance of one third of a mina of silver out of the one mina to PN, and (then) he will have been paid her dowry", Nbn 243: 15–17 (yr 6, B)

D and Š forms:

D É.MEŠ-šú-nu ul zu-ú zu "their estates were not divided" YOS 6 143: 14 (Nbn yr 10, U)

DÜ-uš NÍ.G.SID-šú-nu ma-la ba-šu-ú it-ti a-ha-meš qa-tu-ú û-il-tî.MEŠ-šú-nu e-er-\(\)ra-ú GÍS.LE.U,UM.MEŠ-šú-nu pu-us-šu-ú git-ta-ni-šú-nu hu-up-pu-ú "any business accounts remaining have been resolved between them; their IOUs have been paid, their ledgers erased and their receipts cancelled" TCL 13 160: 11–13 (Camb yr 3, B)

ZÍ.LUM.MA ki-î ú-kal-lim-an-ni a-hi nu-ku-su-nu "when he showed me the dates some had been cut", CT 22 78: 8–10 (letter B) (ventive)

---

34 This clearly indicates that the predicative adjectival form of šatāru may be used in two ways:
1) x šà y šātir "x which has y inscribed on it" (agreement between x and šatāru, e.g. ėt\(\)tu...\(\)šātā\(\)tir\(\)). The examples involving šamātu also fall into this category.
2) x šà y šātir "x, on which y is inscribed" (agreement between y and šatāru, cf. šatāru...šātir, above), exx.: GÍS.DA šà LÚ.PAN.M[EŠ]...ina mub-bi šat-ta-tu PN u PN,...ina lib-bi la šà-a[f]-ru "(regarding the) ledger with the bow fief men inscribed (assuming a fsg collective, i.e. LÚ.qaššu) on it, PN and PN, were not inscribed on it",YOS 6 116: 8–12 (Nbn yr 10, U) and: ū-il-tî...u ina lib-bi šat-ru "an IOU, and on it there was written...", YOS 7 7: 71...73 (Cyr yr 1, U).
Another D example is *gu-ul-lu-ub* "shaved", in AnOr 8 48: 28 (U) and in the following *maš-šīr* may possibly be written for *muššaru*.35

*a-na UGU ZÚ.LUM.MA šá aq-qab-ba-? mi-nam-ma te-mu ul maš-šīr* "regarding the dates I’ve been talking about, why is there no information released?" CT 22 193: 25–28 (letter, end Nbn? B)36

Š *i-na-an-na PN...a-na UGU É ǜ mim-ma šá kan-ku-ma pa-ní-ia šu-ud-gu-lu u e-li PN,...pa-qa-ri û-šab-ši* "now PN has made a claim for the house and everything signed and transferred to me and (also) for PN₃ (our slave)″, Nbn 356: 23–27 (yr 9, B)

ii) Their *paris* forms can be active: therefore *paris*, active stative or active predicative verbal adjective. Examples of this are regularly seen in the use of the legal idiom *pūt...nasū*. It should be noted that, since this active form is limited to just a few verbs, usually *našā* and *mahāru*, it may not be fully productive:

*pu-us-su-nu a-na la ha-la-qu na-šā-a-ka* “I take responsibility for their not going missing”, YOS 7 70: 17 (Cyr yr 8, U)

*PN...pu-ut GİR.II šá PN₃, na-ši PN₃...pu-ut GİR.II šá PN₃, na-ši* “PN is responsible for the availability (literally, “the feet”) of PN₃; PN₃ is responsible for the availability of PN₄”, Dar 296: 16–18 (yr 11, B)

*mim-ma e-lat ina ŠU.II-šú ul mah-rak* “I (have) received nothing else from him”, YOS 6 193: 5–6 (Nbn yr 13, U)

*GÍD.DA ma-hir ul-tu é-an-na na-ad-na-āš-šū* “he received a docket. It was issued (literally, “given to him”) from Eanna”, AnOr 8 63: 5 (Cyr yr 9, U) (ventive + suffix)

*ina lib-bi l{ MA.NA 1 GÍN KÚ.BABBAR [ina] SAG.DU ú-il-ti šá 4 MA.NA KÚ.BABBAR u UR₄,RA ú-il-ti ...PN...ina ŠU.II PN...a-na muh-hi-šú-nu mah-rat* “out of that, PN has received from PN, on their behalf from PN, one and a half minas and one shekel from the capital of the IOU for four minas, plus the interest on the IOU", YOS 7 150: 9...15 (Camb yr 3, B)

*ŠÉ.NUMUN-u-a šá ina ŠU.II PN maš-ka-nu ša-ab-ta-ta... “my land, which you (ms) took from PN as a pledge...”, Cyr 337: 9–10 (yr 9, B)

*PN...te-e-mu šá fPN₃, AMA-ia ú fPN₃, AMA.AMA-ia har-sat* “PN has found out information on PN₃, my mother and PN₃, my grandmother”, YOS 6 224: 16–18 (Nbn yr 15, U)

*k-i ŠÉ.BAR EN se-bu-ú EN [x?] li-iš-pu-ru x “if Sir wants the barley may Sir write (?)”, CT 22 200: 22–23 (letter, Nbn? B)

---

35 On the basis that *muššaru* is the post-OB form of this verb and that CVC signs are sometimes written for their consonantal rather than vocalic value.

36 Note regarding line 6 in this letter: *a-di UGU en ul qa-ba-?.* If *en* is a shortened form of *enna*, *qa-ba-?* is a passive “up to now it has not been said to me” (i.e. “I have not been told”). If *en* is *EN*, i.e. “Sir has not told me”, then it is active cf. ii, below.
Note regarding išû

*išû* is used in the texts from Babylon as a defective “stative”, referring to a state of not (using *la*) being or not having. In a finite form *išû* is also used in prohibitions (using *ul*):

\[ u₄-mu. MEŠ ma-du-ti la an-na-mir... DUMU-ba-nu-ta-a la i-ši “for many days I was not seen... I do not have the status of a free man”, Nbn 1113: 18–19 (after yr 7, B) \]

\[ KU.BABBAR šá e-ṭe-ru la i-ši PN a-na PN₂ iq.bi um-ma KU.BABBAR a-na e-ṭe-ri-ka la i-ši “there was no silver to pay back. PN said to PN₂, ‘there is no money to pay you back’”, CTMMA 2 53: 7–10 (Nbn yr 9, B) \]

\[ ru-gum-ma-a ul i-ši “there is to be no legal complaint”, Nbn 668: 16 (Nbn yr 12, B), cf. Nbn 293: 31–32 and VS 5 38: 33–34 (Cyr yr 6, B) \]

\[ ta-a-r[i] ṣu-gum-ma-a ul i-šu-a “there shall be no comeback or complaints”, Dar 551: 13–14 (yr 22, B), cf. Camb 349: 29–30 and Dar 26: 24 \]

§3 *lu*, the asseverative morpheme.

In earlier phases of Akkadian emphasis could be placed on a verb by the preposing of *lu*. It is rare at this stage of NB and there are difficulties in that, out of the few examples that do exist, many may be precatives. Streck has already observed the complications in the use of the prejective (§25b, p129). He makes two important points:

- The preterite is sometimes used instead of the preceptive. This is due to the influence of the Aramaic imperfect.\(^\text{37}\)

- In function the preceptive and the asseverative are very similar in that they function as polite commands. The present is not used for the preceptive. Streck has no examples of “Affirmatives *lu*” (i.e. the asseverative) in *iparras* but then he does not seem to find a distinction between that and the preceptive, cf. YOS 3 17/TCL 9 129: 38–43, below.

The situation is not helped by the fact that most of the examples involve the difficult verb *idû*, to which *lu* in the preceptive does not seem to attach itself when *idû* is in the third person. Alternatively, it is possible that none of these examples is a precative,\(^\text{37}\)

\(^{37}\) Of course this is noticeable only in 3ms and 3cpl verbs. cf. YOS 3 8: 11–12 in i, below (*lu māda*).
and that idā is being used with the asseverative as a polite command, for which a better translation may be "...must know": 38

i) lū māda is the asseverative with the adverbial māda 39 "a lot, very greatly". This meaning is unique to NB: 40

śi-pir-tu, šā PN...šā iš-pur-rak-ka lu ma-a-da ma-na-a-ta mim-ma ma-la iš-pur-rak-ka šu-bi-l-ā-āš "the letter PN sent to you means 41 a lot. Whatever he wrote to you about send to him", YOS 3 79: 13–16 (letter, 539–526, U)

lu-ū ti-i-de dib-bi lu ma-a-du a-kan-na ina UGU-i-ni bi-šu-32 "you do know that the talk against us here is very bad", YOS 3 19: 20–21 (letter, early Cyrus, U) cf. lu ma-a-da da-a-nu "it is too hard", ibid.: 12

at-ta 4 EN i-mu-ru šā lu ma-a-du sa-ma-ak-ka "you, Sir, must see that I am greatly harrassed", YOS 3 8: 11–12 (letter, early Dar, U)

Another example is in YOS 3 22: 10–11, given below.

ii) lū with finite forms:

DN 1Lu i-del ki i-ul-tu muh-hi šā tal-li-ka lu-ū lā as-mu-ū "Since you went, if I have not had the greatest trouble Śamaš knows (I'm a dead man)", YOS 3 22: 8–11 (letter, early Nbn, U) 43 cf.

EN lu-ū i-de...ina muh-hi i-ni-ia na-as-ka-ak "Sir must know I am bedridden!", CT 22 83: 5-8 (letter, middle Dar, B)

dEN 4 NĀ lu-ū i-du-ū ki i 2 GUR 2 PI BANLIMMU nu-ku-su "Bēl and Nabû must know that if 2 kur 2 pi 4 sūtu were cut (I'm a dead man)", CT 22 78: 11–12 (letter, 545–526, B)

lu-u ti-i-de dul-lu ina UGU-ia da-a-nu "you do know the workload on me is (too) much", YOS 3 33: 4–5 (letter, early Cyrus, U)

lu-ū ti-i-du MN a-ga-a šā MU 15.KĀM İTII di-ir-ri "(this letter is) so that you know that this Addaru, year 15, is a month with an intercalation", YOS 3 115: 6–9 (royal letter, Nbn yr 15, U)

a-hi šā mišši-hu LŪ.RIG.,ME lu-ū i-her-ru-ū u a-hi KÚ.BABBAR a-na LŪ.HUN-GĀ.ME lu ta-ad-din-na-3 GIS.DA šā LŪ.RIG.,ME a-nur-ma lā mam-1 ina lut-bi la ta-se-li 45 "the širkus are definitely digging part of the stretch and (but?) you

38 The few examples of precative lide (CAD idā 2 2' b and 1 6' b, p28a and p24b) are from the Amarna letters.
40 See CAD mādu (the verb) 1 4', p25a. Evidently it started as a predicative adjective in MB: lu mādu "may they be available in quantities", then later took on adverbial force as lū māda.
41 manā seems to fit better than banū, posited by AHw and CAD. The letter seems important rather than simply pleasant.
42 The odd word order is discussed in II §3 c ii, below.
43 A difficult text which is discussed in speech and oaths, III §4, below. Other examples of DN lū ide ki/DN lū idā ki, etc. are given there also.
44 The scribe has written UD.
45 tu-maš-šar in YOS 3 17: 43.

32
gave part of the silver to the hired labourers’. Look\textsuperscript{46} at the širku-ledger and do not leave anyone out”, YOS 3 17/TCL 9 129: 38–43 (letters, early Camb, U)

The unclear boundary between the precative and asseverative is exemplified in:

\[ia-a-n\-u\-a a-na PN a-na muh-hi lu-uq-bi-ma\ “if not, I will definitely\textsuperscript{47} tell PN...”\]

RA 11: 32–33 (letter, 533–532, U)

§4 Commands

a) Imperatives

i) Standard forms. The forms of imperatives, their place in the sentence and their ability to take ventives and suffixes are the same as for imperatives in earlier phases of Akkadian. G, D and Š forms are represented.

<table>

For examples (without suffixes) see the tables at the end of chapter 3. Further examples (with suffixes) are in IV §4, below (ventives) and V §3e, below (personal pronouns).\textsuperscript{49} There are more examples in the Uruk corpus than that from Babylon, especially for 2pl forms.\textsuperscript{50}

Other examples of interest (G forms):

\[kap-du KASKAL.II a-na GI.R.II-šū-\-au šu-kun\ “quickly send (2ms) them on their way”\textsuperscript{51} YOS 3 45: 37–38 (letter, Cyr–Camb, U)

\textsuperscript{46} 2ms, change of subject.
\textsuperscript{47} “let me tell” does not fit well, here.
\textsuperscript{48} Apart from the one unsuffixed example of a 2fs impv, šu-pur, given below, a-mur in CT 22 200: 9 can not be considered as significant, since amur functions as a sort of interjection in letters. Woodington unfortunately finds no 2fs imperatives in her corpus (p99f).
\textsuperscript{49} Many useful examples are given in Woodington (p99f). Her findings for Kuyunjik NB are the same as the above.
\textsuperscript{50} There is no explanation for this. It may simply be caused by the different natures of the two corpora.
\textsuperscript{51} Literally, “put the road to their feet”, a common idiom (discussed by Kienast, 1988), cf. with plural impv: \[kap-du KASKAL.II a-na GI.R.II-šū-\-ku^n\-\-u\-n\-na\-r\] in YOS 3 52: 19–20 (letter, 358–532, U). See also JAOS 36: 35–36 (letter, 538–532, U)
PN a-na bur-ki šá FDN l?te-li šu-pur “has PN gone up to the lap of Tašnēnu”\(^5^2\) Write”, (2fs) CT 22 6: 33–34 (letter, Cyr, B)

[še-e-nu a-bu-ku-ma KÚ.BABBAR-ši-na i-ša-î i-{b}ji-î “take (i.e. “sell”, 2ms) the sheep and bring their silver and count it”, YOS 7 7: 68–69 (Cyr yr 1, U)

bu-qul us-ha-nu “pull up the hops”, CT 22 79: 22 (letter, 551–527, B) (2pl, ventive)

D forms:

$mim$-ma šá ina ŠU.II-šu ta-mur i-šam-ma kul-lim-an-na-a-šš “bring and show us whatever you saw in his possession”, TCL 13 170: 10–11 (Camb yr 5, U)

PN šá ãš-pur-ak-ki(sic)-nu-su šu-di-da-âš “PN, whom I sent to you, look after him and respect (?) him”, CT 22 9: 21 (letter, 551–527, B)

2fs $kul$-lim-in-ni-ma “show to me…”, TCL 13 179: 14 (U)

Ś forms:

$ru$-ud-de-e-ma šu-bi-lu “add and send”, YOS 3 79: 31–32 (letter, 539–526, U)

(livestock and birds) a-lik-ma e-si-ir-am-ma a-na é-an-na šu-ri-bi “go and round up (the livestock and birds) and drive them into Eanna”, YOS 7 198: 15–16 (Camb yr 6, U)

šá-ud-gil-ma “transfer”, CTMMA 2 54+Nbn 380: 10 (B)\(^5^4\)

šu-bi-lu “bring”, YOS 3 106: 14 (U)

with ventive and suffix:

šu-bi-la-âš “send to him”, YOS 3 79: 16 (U)

2mpl with ventives:

šu-bi-la-a-ni “bring (to me)”, YOS 3 145: 16 (U)

šu-bil-la-a-nu “bring (to me)”, YOS 3 33: 15 (U)\(^5^5\)

šu-bil-an-na “bring (to me)”, ibid.: 33

šu-bi-la-nim-ma “bring (to us)”, JAOS 36: 21

šu-ša-a-nu-uš-šú-nu-tu “make them come out”, TCL 9 111:10 (U)

---

\(^5^2\) I assume this is a euphemism for dying. This interesting letter is discussed in appendix §4 b n\(71\).

\(^5^3\) I assume adâru “to fear”, G.

\(^5^4\) A larger extract is given in d, below.

\(^5^5\) This and the following example should actually be 2ms forms, but the writer slips into the 2mpl throughout, cf. innâššimûtu in line 24 (nadânu impvs, below).
ii) Unusual spellings for standard forms:

Several examples (all from Uruk) of what appears to be anaptyxis (CVCCa or CVCVCCa spellings for CVCCa) are noted for the plural impvvs:

- **pi-qi-da-a** “entrust”, *JAOS* 36: 10 (piqdā)
- **šu-**-kun1-na-“set”, *YOS* 3 52: 20 (šukanā)
- **a-mu-ra-** “see”, *YOS* 3 29: 22 (amrā) cf.
- **a-mur-** “see”, *YOS* 3 81: 32, cf. *a-mur* in line 30
- **šu-di-gi-il** “transfer” (2ms), CT 22 8: 11.

Note also:

- **šu-kun-ši-né-e-tu** “put them (3fpl)” in *YOS* 3 4: 11 (royal letter, 543–539, U), is presumably a very proper spelling for *šukuššinēt*. See also personal pronouns, V §3 e, below.

The imperatives of *nadānu* are formed as follows:

<table>
<thead>
<tr>
<th></th>
<th>2ms</th>
<th>2mpl</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td><strong>idin</strong></td>
<td><strong>innā</strong></td>
</tr>
<tr>
<td>ventive</td>
<td><strong>inna</strong></td>
<td><strong>innā(ishik)</strong></td>
</tr>
</tbody>
</table>

Examples:

- **i-din** “give”, TCL 13 134: 6 (U)
- **id-din** “give”, Stigers 36: 5 (U); Nbn 243: 5 (B)
- **i-di-in** “give”, Dar 385: 7 (B)
- **in-na-āš-šu-nu-ta** “give to them”, *YOS* 3 33: 24 (U), cf. TCL 9 111: 12 (U)
- **in-na-āš-šu** “give to him”, CT 22 74: 24 (B)

b) The precative *lū/lu-

The function of *lū/lu- is the same as for the other Akkadian dialects.

i) The precative of the verbless clause is *lū*: “may it be...”:

- **ši-pir-ta-a lu-u LŪ.mu-kin-nu ina muh-hi-ka** “may my letter be a witness against you”, *YOS* 7 102: 24 (Camb acc, U)
- **lib-bi šā AMA-ia lu-ú tā-ab-šu** “may my mother’s heart be pleased”, *YOS* 3 22: 18–19 (letter, early Nbn, U) cf. *lib-ba-ka lu-u tā-ab-ka* (2ms) in *YOS* 3 4: 4–5

---

56 By analogy with *kunnā?*
57 *LU.ENGAR.MEŠ-ka a-na MN pa-ni-ia *šu-di-gi-il* “transfer your farmers to me for Šabātu” (letter, 545–527, B).
58 Line 17 also has an example of *lū* and the pronoun copula *iššu*. See §2 a ii, above.
and YOS 3 115: 4–5, *lib-ba-ku-nu lu-u ṭa-ab-ku-nu-šī* in YOS 3 2: 5–6 (royal letters, Nbn, U)

(PN) *a-na DUMU-u-tu lu-ul-qē-e-ma lu-ú DUMU-u-a šu-ú* “let me take (PN) for adoption and let him be my son”, CTMMA 2 54+Nbn 380: 7–8 (yr 9, B)

ii) The precative with finite verbs

The precative is formed from the preterite prefixed with *lu-* for 1cs for all verb forms and *li-* for third person forms in G and N verbs. *lu-* is the prefix for those D and S forms attested. The existence of the 3rd person prefix *li-* in D and S verbs (*liparris, lišapris*)59 noted in the older Babylonian dialects cannot be ascertained for the NB studied here, but the evidence provided by the few S forms indicates that it may have been completely replaced by the *lu-* prefix.

First person forms:

*lu-uz-qu-up* “let me plant”, YOS 6 67: 8 (Nbn yr 4, U)

*lu-uš-pu-ur* “let me write”, YOS 6 71: 25 (Nbn yr 6, U)

*lud-din, lu-ud-din*, etc., “let me give”, TCL 12 90: 7, TCL 9 79: 29, TCL 13 182: 8,13

1 GISMA...*lu-up-he-e-ma lud-daš-šu* “let me caulk a boat to give60 to him”, YOS 3 45: 33...35 (letter, Cyr-Camb,U)

*lu-pu-uš* “let me do”, passim.

ŠUK.HI.A *a-na ku-šu lu-hi-ir* “let me keep rations back61 for the cold weather”, YOS 3 45: 24–25 (letter, Cyr-Camb, U)

Note the unusual:

*šu-pur-am-ma lu lil-lik* “write to me to go”, (for *lullik*) YOS 3 69: 30 (letter, 539–526, U)

Third person forms:

(ZULUM.MA)...*a-na PN EN.MES šu-lid-din-nu-* kap-du lik-šu-du “may Sirs give...(dates) to PN. May he arrive quickly”, ibid.: 37...41

*li-ih-tu* “let him make mistakes”, YOS 3 177 TCL 9 129: 35, 34 (letters, early Camb? U)

*li-i-ru-ur* “may he curse”, Cyr 277: 18 (yr 7, B)

---

59 See GAG §81c and Woodington (p102), who observes that the *li-* prefix is not common and is primarily limited to elaborate greetings.

60 That *nadanu* exhibits a sound change when suffixed is seen in *lud-daš-šu-nu-tu* in YOS 3 79, given above in the purpose clauses, and *lu-ud-dak-kam-ma* in Cyr 337: 11, also given in V §3 f, below, note 2.

61 *ahātu* D is the assumed verb (AHw p 18).
LU.A.KIN-ku-nu  lil-li-kám-ma ŠE.BAR...šá ina NÍG.GA šá-ak-nu li-mu-ur  ā šá a-na la gi-né-e it-tir liš-ši “your messenger may come and he may look at the barley...that is deposited in the store and whatever is in excess of the ginû offering he may take”, YOS 3 126: 34–38 (letter, 525–524, U)

li-mu-ur-ši-pu-uš “may he see...may he do”, YOS 3 45: 12...19 (letter, Cyr–Camb, U)

liš-pur-ā-nu “may they write”, YOS 3 21: 17 (letter, Cyr–Camb, U)

Š forms:

lu-še-bi-laš / lu-še-bi-lu “may he bring”, passim in letters.

lu-še-su-šu-su-nu-tu “may they let them out”, YOS 3 21: 15 (letter, Cyr–Camb, U)

ZÚ.LUM.MA  lu-še-lu-ni-im-mu (sic) a-na ŠE.BAR ina GN lid-din-ā “let them bring dates up so that they can sell them for barley in Nippur”, YOS 3 81: 21–22 (letter, Cyr–Camb, U)

Š forms (first person):

ši-kat...šá KA...ina mu-ši lu-up-te-ma lu-še-si-ka “let me undo the bolt of the gate...in the night for me to let you out”, YOS 7 78: 10..11 (Cyr yr 7, U)

PN...iz-qā-a-ta AN.BAR i-di-ma...a-na IGI-ia šu-pur-āš-ši-im-ma a-kan-na ina qaq-qar lu-ul-ti-il-šā “throw PN...into irons and...send him to me for me to make him grovel in the dirt; here”, YOS 3 19: 24...29 (letter, early Cyr, U)

There is one clear example of an N form in the texts:63

li-in-na-din “let it be given”, YOS 3 81: 11 (letter, Cyr–Camb, U)

c) Precative forms without a precative particle

i) The cohortative

This functions for the first person plural as the precative does for the second and third persons and 1cs. It had already lost the preformative i in Kuyunjik NB (Woodington p100f) and therefore appears identical to the preterite:

qi-ba-na-an-ša-ša ma ni-pu-uš “tell (sg) us so we can do it”, YOS 7 70: 10 (Cyr yr 8, U)

dib-bi-šu-nu ni-iš-me-ma EŠ.BAR-šu-nu ni-ip-ru-us “let us hear their case and make a decision about them”, YOS 3 96 (letter, 533–526, U)

62 See Note in IV §4, below (ventives).
63 There is also the uncertain reading lim-ma-ši-hi “may it be measured”, CT 22 200: 18 cited in masāhu N in AHw p623b.
These last two examples are also purpose clauses. Further examples are in II §1a iii, below.

ii) Other forms without a precative particle

The preterite sometimes replaced the precative owing to influence from the Aramaic imperfect. Streck lists earlier references (including those references to the disappearance of the i in the cohortative) to the subject in §25 (p127f). The difficulty in identifying pretatives in iprus is not helped by the difficulties in understanding the contexts in which they occur, as they seem to occur only in letters. The examples below are also given by Streck:

PN al-tap-par-ka u PN,...it-ti-šū a-di muh-hi n KU.BABBAR EN lid-da-šū KU.BABBAR a-na šá-a-šū u PN, id-din-NU “I have sent PN to you and PN, is with him. May Sir give up to n silver to him. May he give it to him or to PN. CT 22 148: 6...13 (letter, 545–527, B)

i-na lib-bi ša AD-u-NU at-ta a-na EN-/a as-pur-NU “because you are our father, may I write to my lord”, CT 22 183: 19...25 (letter, IMB, B)64

at-ta ⁴EN i-de ša MU.AN.NA a, ŠE.BAR ina é-an-na ia-a-nu ŠE.BAR a-na GIS.BAN-ia gab-ba la en,-de-e-tu, al-la-’ n GUR ša a-na gi-né-e ša e-an-na na-šá-a-ta at-ta ⁴EN i-mu-ru ša lu ma-a-du sa-ma-ak-ka “you, Sir, must know that this year there is no barley in Eanna. The barley(yield) on my farm-lease has not been estimated apart from n kur which was taken for the regular offering for Eanna. You, Sir, must see that I am greatly harrassed”, YOS 3 8: 6–12 (letter, early Dar, U)

The extract from YOS 3 21, given by Streck on page 134, is too broken to be convincing. No 3fs pretatives (with or without lī) are identifiable in my corpora. Already in Kuyunjik NB the preterite alone is being used; Woodington (not cited by Streck) gives the examples tattûr “let it turn”, and tēlā “let it come up” (p99).  

d) ìbina(mma), binnâ(nimma)65  A defective compound verb, understood by von Soden to be a combination of the imperative of the the Aramaic root (w/y)hb, “to give” and the NB ventive imperatives of nadānu, inna, innān “give”. It appears only in the imperative. The Babylon corpus provides no examples, although the examples in GINBr p76 show that it was used in other places besides Uruk. Those Uruk examples from my corpus are given below. Their indirect objects are always 1c.66

64 What appears to be a precative in question form is in lines 14–18. See §6 b ii, below.
65 (bîn in GAG Erg. §107w and AHw p126b; bî in CAD A/I p216f; bănū in GINBr p76.) Not noted in Kuyunjik NB by Woodington. However, there are two examples in the Nippur NB letters, i-bi-ni “give (2ms) me”, and bi-na-a-nu “give (2mpl) me” (Cole, 1996, p298). The Dialogue of Pessimism, a poem in SB with copies dating from the reign of Asû, twice uses the singular bi-nam-ma (Lambert, 1960; p144, lines 11 and p146, line 54). Examples are also in Gilgamesh tablet 6 (SB, Assyrian version) and in VS 1 70, a NB kudurru dated from the reign of Sargon II. (See the entry in CAD.)
66 nadānu is used alone, if the indirect object is not 1c.
In GAG §107w von Soden says *ib-inna* was the earlier form, which was then reduced to *binna*. The above examples suggest that by the time of Nabonidus year 3 (at least in Uruk) the plural form had lost the /i/ initial. Segert gives the Aramaic 2ms impv of (w/y)hb as *hab* and the 2pl as *hābū* (p277).

e) Replacement of the imperative by a present-future is common in the third person, e.g. *inamdin* "he is to give", passim, but also occurs in the second person:

\[
\text{at-tu-nu PAP LU.NA.GAD.ME...it-ti-ku-nu ta-ab-ba-ku a-na pa-ni PN it-ti-i-ni tal-la-ku "you (mpl), take all the herdsmen...with you. You are to come with us to Gobryas", AnOr 8 43: 16-19 (Cyr yr 4, U)}
\]

\[
\text{te-li a-na LUGAL ina muh-hi qī-bi "go up\textsuperscript{69} and tell the king about it...", YOS 3 200: 40 (letter, early Camb, U).}
\]

§5 Negation

*Ia* and *ul*. Although earlier Babylonian dialects may keep the distinction in usage between the two quite clear (GAG §127), this is not the case here. *Ia* and *ul* will therefore be dealt with together and comments about their differences are given at the end of c.

a) Negations in nominal phrases and single words:

*Ia* is consistently used throughout:

\[
\text{ina la qa-re-bi śá PN "in the absence of PN", YOS 6 78: 9, 17 (Nbn yr 4, U)}
\]

\[
\text{ka-a-ri ina la LÚ.man-di-di ú-ša-uṣ "the quay/customs remains without a measurer", YOS 3 113: 21–22 (letter, early Cyr, U)}
\]

\[
\text{il-la GUB-zu śá PN "in\textsuperscript{70} the absence of PN", YOS 7 7: 52 (Cyr yr 1, U)}
\]

\[67\text{ Earliest attestation in the corpus.}\]

\[68\text{ For a possible contraction of \textasciitilde{nāči} to \textasciitilde{nāši} see V §3 f note i, below. A fuller extract from YOS 7 156 and the example from YOS 6 67 are given in II §1 a iii, below (purpose clauses).}\]

\[69\text{ Assuming \textit{telli}.}\]

\[70\text{ The assimilation of \textit{ina} + \textit{la} to \textit{il-la} is a hapax in the two corpora.}\]
LU.ERIN.MES ina la SUK.HLA i-sam-mu-ū “the workers are suffering from lack of rations”, YOS 3 52: 17–18 (letter, 538–532, U)

7 MANA KU.BABBAR...ša la gi-in-nu “seven minas of silver, not of the ordinary kind”, Dar 494: 1 (yr 19, B)

tah-sis-ti la ma-še-e “a memorandum not to be forgotten”, Nbn 68: 14–15 (yr 2, B), cf. CTMMA 1 18: 13

b) Negation in verbal phrases:

i) ul is used for the simple negation of a verbal phrase in both Babylon and Uruk. The verb cannot be infixed with a -t-:71

ú-ba-š-ē-ma ul a-m-ma “I looked but I cannot see (it)”, YOS 3 79: 28 (letter, 539–526, U)

la-pa-ši mam-ma ša-nam-ma ul a-li-du “he was not born by anyone else”, AnOr 8 47: 16 (Cyr yr 5, U)

mam-ma ul id-din-nu “no one gave (them, i.e. the dates), CT 22 73: 31 (letter, middle Dar? B)

Since they have verbal function, predicative verbal adjectives are negated using ul:72

É.MES-šu-nu ul zu-š-šu “their estates were not divided”, YOS 6 143: 14 (Nbn, yr 10, U)

A.ŠA.MES ul na-di-in-ma KU.BABBAR ul ma-hi-ir “the fields were not sold and the silver not received”, Dar 26: 27–28 (yr 1, B)

ii) la also appears with both finite and predicative forms, perhaps more so in the Babylon texts:

PN aš-ša-ti a-hu-uz-ma DUMU u DUMU.MUNUS la tul-du “I took PN as a wife but she did not bear a son or daughter”, Nbn 380: 3–4 (yr 9, B)

KU.BABBAR ši-i-mi A.ŠA-ša i-tu-ru-uš ŠE.NUMUN it-ti a-ha-meš la in-šu-hu “he paid him the price of his field but they did not measure (it) together”, Nbn 293: 8–9 (yr 8, B)

u-nu.MES ma-du-ti la an-na-mir DUMU-ba-nu-ta-a la i-ši “for many days I was not seen...I do not have the status of a free man”, Nbn 1113: 18–19 (after yr 7, B)73

However, la negating a main verb can be noted in Uruk:

ba-lu-uk-ku-nu la nu-gal-li-ib-ša “we did not shave him without your permission”, AnOr 8 48: 21 (Cyr yr 5, U)

IM.DUB za-ku-tu ša PN la i-nu-ū er-ret DINGIR.MEš GAL.MEš la ú-ša-an-nu-ū “they did not change the document of dedication of PN; they did not change the curse of the great gods”, Roth: 43–44 (Cyr yr 9, U)

71 See d, below.
72 Further examples are given in §2, above.
73 šuš is actually a defective stative (paris). See the Note at the end of §2, above.
c) Prohibitions

i) la is usually used. The word order is:

[subject + object phrase + la + verb (present tense):]

*kap-du kap-du nu-bat-tu, la ta-ba-ta* “quickly, quickly, don’t stop overnight”, CT 22 83: 9–11 (letter, middle Dar? B)

*na-qu-ta-a la ta-re-sha- śa tê-ma-a la ta-sha-ma- śa “don’t have (2fs) any fears about me that you haven’t heard any news about me”, CT 22 6: 7–8 (letter, Cyr, B)

*it-ti LÜ.ERIN.MES ša É GIŠ.GIGIR-iā...la ta-dab-bu-ub “do not conspire with the men from my chariot house”, CT 22 74: 31–32 (letter, middle Dar? B), cf. 21–22

*mim-ma a-na muh-hi la ta-qaq-bi “do not say anything about it”, YOS 6 235: 8–9 (Nbn yr 12, U)

*mam-ma ina lib-bi a-na mam-ma la ta-nam-din- śa “do not give (2mpl) anyone from among them to anybody”*, RA 11 26–27 (letter, 533–532, U)

*LÜ.A.KIN-ia ina IGI-ka la iz-za-zu dul-lu ina UGU-iā da-a-nu “my messenger is not to stay with you; work is hard for me”, YOS 3 79: 33–34 (letter, 539–526, U)

*PN u PN, ina IGI-ku-nu la i-ku-šu-...nu-bat-ti ina IGI-ku-nu la i-bit-tu- “PN and PN are not to tarry in your presence; they are not to stay the night”, TCL 9 111: 5–9 (letter, 533–532, U)

Prohibitions involving šelū. The usual idiom is *ina/ana muh-hi...la + šelū “regarding ..., do not be lax”**: 77

ša ši-ib-ti ša bir-ri I, MES ša mam-ma it-ti-ka la i-dab-bu-ub- śa “regarding the sibtu-tax from the land between the canals, which no one’s discussed with you, may Sir not be lax about it”, CT 22 80: 19–23

(letter, Nbn, after 545, B)

*ina muh-hi i-mit-ti la ta-šel-li “regarding the imittu-tax do not be lax”, TCL 9 76: 10 (letter, 533–524, U) 80

---

74 From naqādu or nakādu.

75 Both AHw (nakuttu p745) and CAD (nakuttu N/I pp198bf) give this verb as a 2fpl (*tareššā-*) even though at this point in the letter the writer is addressing his mother only. (He later addresses the other members of his family, both male and female, so it could conceivably be 2mpl in anticipation.) It is also possible that the writer is asking a question (“are you not having worries that you haven’t heard...”) but the use of *la rather than *u in *la ta-re-šā- makes this unlikely. (See §6b ii, below.)

77 See GINBr p79 for *ibṭū or *ibbritū as variants of the 3mpl present-future of *batu.

78 *a-na muh-hi acts as a resumptive of the *ša in line 19.

79 See discussion below about *la and the vetitive.

80 Also has the prohibition *nu-bat-ti la ta-{ba}-a-tū (lines 25–26).
ina UGU...(items)...a-na šu-lu-ú 𒈨 𒈠 𒈨 “as regards (the items) for
loading up, may Sir not be lax”, YOS 3 19: 29...31 (letter, early Cyr, U)

ina UGU šu-us-bu-ut-tu, ta-bi-la-a-nu 𒀳 𒄴 𒈨 𒈠 “as regards the
stocks, assignments (?) and requisites, may Sir not be lax”, YOS 3 79: 17–20
(letter, 539–526, U)

ii) ul in prohibitions:

1) Babylon:

LU.TUK-ú ša-nam-ma ina muh-hi ul i-ša-lat “no other creditor has right of

mim-ma ina lib-bi PN a-na re-e-mu-ú-tu ul ta-a-re-me ū ni-is-hi a-na muh-hi ul
ta-na-as-sa-hi “PN is not to give anything of it away as a present or make any
withdrawals with regard to it”, Nbn 65: 18–19 (yr 2, B)

PN DUMU.MUNUS-su šá PN ul tu-maš-šar...[a-na a-ša]r ša-nam-ma ul tal-lak
“she is not to desert PN’s (baby) girl...she is not to go anywhere else”, BE 8 47:
6...8 (Nbn yr 5, B)

Note that the defective stative of išô is commonly negated using ul:

ru-gum-ma-a ul i-ši “there is to be no legal complaint”, Nbn 668: 16 (Nbn yr 12,
B)

ru-gum-ma-a ul i-ši ul i-tur-ru-ma a-ha-meš ul i-rag-<gu>-mu...um-ma É šu-a-ti ul
1na[ ]djin-ma KU.BABBAR ul ma-hi-ir “there is to be no legal complaint. They
are not to make another claim, saying, ‘that house was not sold and the silver not
given’”, VS 5 38: 33–34 (Cyr yr 6, B)

ta-a-ri û ru-gum-ma-a ul i-šu-ú “there shall be no comeback or complaint”,
Camb 349: 29–30 (yr 6, B), cf. Dar 26: 24

2) Uruk:

LU.GÁL-ú ša-nam-ma a-na muh-hi ul i-ša-lat “no other creditor has right of
disposal”, referring to assets pledged to a certain creditor, which cannot be
accessed by any other creditor, YOS 6 90: 16–17 (Nbn yr 7, U). This phrase is
not so common in Uruk.

li-gi-in-ni a-na LU.RIG, MES ul tu-ša-aq-bi 83 “you are not to make the širkus
recite the extract tablets”, YOS 19 110: 5–6 (Nbn yr 15, U)

a-na muh-hi ša LU.ma-gu-šu il-la-kám-ma É ZLDA i-her-ni mam-ma ZLDA a-na
lib-bi ul i-de-ek-ki “until the magus comes and digs/examines (85) the flour
house no one is to remove the flour in it”, YOS 3 66: 8–9 (letter, Camb pre-526?
U)

82 Both GÁL-ú and TUK-ú are to be read rašû.
83 For tušaqba.
85 Discussed in VI §2, below.
Comments on b and c, above.

The loss of distinction between *ul and *la in main clauses is already noted by Woodington (324–327). The Aramaic negative particle is *la* and this would certainly explain the increasing use of *la* in NB. Unfortunately, as far as these corpora are concerned, there are not enough examples to indicate whether *la* is used more than *ul* to negate main clauses at this later stage of NB, except that there is a tendency for Babylon to use *ul* more than Uruk in prohibitions. 12 Babylon texts use *ul* at least once, 5 use *la* at least once. Uruk continues to prefer *la*, with 17 texts using *la* at least once, the four examples above being the only ones with *ul*.

The prohibitions in the Kuyunjik NB letters have only *la* + present (Woodington, p102 and p323). On page 323 Woodington also notes that the *ai/*ē vetitive particle has been absorbed by *la*. This is the case in this later NB, as is the same pattern of using *la* + present if one is politely addressing a superior (cf. *bēl la īšelli*, above). Otherwise, straightforward prohibitions now use *ul*, but not with the variations in word order noted by Woodington (325–327).

d) *la* is used in subordinate clauses without exception:

(land) šā PN *la* īš-ba-tū “(land) which PN did not take”, TCL 12 90: 5 (Nbn yr 7, U)

(items which) PN...ina ŠU.II PN₂...iš-šū-[i]a-ma86 a-na ē-an-na *la* id-di-ni “(items which) PN took from the possession of PN₂...but did not give to Eanna”, YOS 7 7: 3...4 (Cyr yr 1, U)

PN...šā PN₂...a-na 1 MA.NA KŪ.BABBAR...a-na PN₂...id-di-nu-na ma PN₂ a-na É PN₂, *la* i-ru-bu “(regarding the case of) PN, who sold PN₂ to PN, for one mina of silver but PN₂ did not go to the house of PN,”, YOS 7 114: 1...3 (Camb yr 1, U)

DUMU-šā šā ina *lib-bi* *la* i-pal-lăh-šā HALA ina *lib-bi* *ul* i-leq-qu “any son of hers who does not respect *ēr*...will not receive a share”, Rutten: 8–9 (Nbn yr 1, B)

In the case of negation in the future, conditional sentences with *ki* can have *la* + verb with infixed -t-: 87

*ki-i SE.NUMUN pa-ni PN *la* in-da-har... “if the arable land does not please PN...”, VS 5 20: 16–17 (Nbn yr 1, B)

---

86 Unusual spelling, cf. YOS 7 42: 16.
87 See III §3a, below and Streck §36f (p164). In §18a (p129) he observes that *ul iptaras does not occur.*
ki-i la uk-ti-nu 1+en 30 a-na FDN i-nam-di-in “if he does not give evidence...he is to give thirftyfold to the Lady-of-Uruk”, YOS 6 175: 6 (Nbn yr 12, U)

Contrast these two examples with AnOr 8 79: 9...13, where the condition and penalty are given as two paratactic statements:88

ina MN...PN, ul i-bu-ká-m-ma a-na PN, ul id-din 1 MA.NA KÚ.BABBAR a-na FDN i-nam-di-in “(if,) in Taššitu...PN has not brought PN, and given him to PN, he is to give one mina of silver to the Lady-of-Uruk” (Camb yr 7, U)

e) Negation in questions:89

i) la90

ii) ul is preferred after minā or mināmma:

mi-na-a LU.A.KIN-ku-ru ul a-mur “why haven’t I seen your (mpl) messenger?”, CT 22 9: 8-9 (letter, 554-527, B).

mi-nam-ma a-na LÚ.ŠÁ.TAM u LÚ.šák-na šá ina pa-na-tu-ú-a paq-du ul taq-ba u ul-tu UGÚ šá a-na-ku paq-da-ak-ka ul taq-ba-1 “(why didn’t you speak to the šatammu or the official who was posted before me and why didn’t you speak to me after 1 was posted?)”, TCL 13 170: 8-10 (Camb yr 5, U)

ú-il-ti.LE...mi-nam-ma ul ta-di-in-né-ši-ma ZÚ.LUM.MA ul ni-si(=ti?)-ir “why didn’t you give the IOUs...to us and why didn’t we collect(?)91 the dates?”, TCL 13 181: 15...17 (Dar yr 2, U)

KÚ.BABBAR šá āš-pur-rak-ka mi-nam-ma KÚ.BABBAR ul tu-šé-bi-šu “(regarding) the silver that I wrote to you about, why didn’t you send the silver?”, CT 22 83: 22-23 (letter, middle Dar? B)

Further examples are in CT 22 6: 32, 41; CT 22 193: 27 (both B) and YOS 3 64: 10 (U).

f) mimma is sometimes inserted in order to emphasise negatives without otherwise changing the meaning:

mim-ma [erasure?] je-e-me PN a-na muh-hi-šá-nu ul iš-ku-na-an-na “PN gave me no information whatsoever regarding them”, YOS 7 70: 10-11 (Cyr yr 8, U)

mim-ma HALA šá PN...i-na LÚ-tú ŠU-a-ti ia-a-nu “PN has no share whatsoever in that servant”, Dar 551: 12...13 (yr 22, B)

88 Discussed in III §3d, below.
89 I have no clear example of a negative question without an interrogative particle but see the comments to CT 22 183: 14-18 in §7b ii, below.
90 la was the norm for earlier Babylonian dialects (GAG §122a, §153c), including Kuyunjik NB (Woodington p322). However, ABL 1380: 18 (p298) should be added to the exception on p322. (Both examples use ul.)
91 Verb unclear. Perhaps the meaning is “why were the dates not collected?” but the N of esēru A (CAD 332a-334a) “to press for payment due, to collect”, is not attested and the N of esēru B (CAD p334a) “to be collected” is a hapax in MB. Since a G stative (paris) would suffice to convey a passive meaning, I therefore wonder if eferu was meant.
The following letter has two examples of emphatic mimma separated from its governing negative by a subordinate clause:

\[\text{mim-ma a-ki-i pi-i šá LÚ.UN.MEŠ EN la il-lak} \quad \text{"in spite of what people say, Sir definitely is not to go"}, \quad \text{YOS 3 22: 13–14 (letter, early Nbn, U)}\]

\[\text{mim-ma a-ki-i pi-i šá mam-ma la tal-la-ki} \quad \text{"in no way, in spite of what anyone says, do you have to go"}, \quad \text{ibid.: 19–21}\]

In the following, mimma and the negative in an oath combine to produce an emphatic positive:

\[\text{DN ki-i mim-mu gab-bi la ú-qat-tu-u} \quad \text{"by Šamaš, (woe betide me) if they definitely haven't completely finished, " (i.e. he is swearing that they have finished) YOS 3 21: 31–32 (letter, Cyr-Camb, U). For TCL 13 181: 12–14 see the section on oaths, III §4 b, below.}\]

§6 Speech and questions

a) The reporting of direct speech

Speech, whether direct or reported, is usually introduced with a verb of speaking (or swearing an oath, q.v. III §4 b and c, below) followed by umma and then the statement in "vivid" representation, i.e. the statement is recorded word for word. An attempt to reproduce this in translation gives:

\[\text{PN u PN₁ iq-ta-bu-nu um-ma ŠE.BAR a-na PN, la ta-nam-din} \quad \text{"PN and PN₁ have told me 'you are not to give the grain to PN₁',"}, \quad \text{YOS 3 169: 12–15 (letter, middle Nbn, U)}\]

\[\text{a-na PN iq-bu-á um-ma tar-gu-mu um-ma DUMU ba-ni-i a-na-ku} \quad \text{"(that) he said to PN 'you claimed 'I am a free man'"}, \quad \text{Nbn 1113: 15–16 (after yr 7, B)}\]

\[\text{PN...a-na PN₂...ki-a-am iq-bi um-ma fPN...a-na aš-šu-tú a-na PN, ma-ri-ia id-din} \quad \text{"PN...spoke to PN, thus: 92 'give fPN in matrimony to PN, my son'"}, \quad \text{Nbn 243: 1...5 (yr 6, B)}\]

92 Marriage contracts regularly employ this formula. For further examples from NB (Npl to Seleucid times) see Roth (1989).
The almost identical Uruk letters TCL 9 127 and YOS 3 17 contain a large proportion of reported statements.\textsuperscript{93} In these letters, the writer Nabû-ah-iddin records speech in which his own name is used and this is also written as said:

\begin{verbatim}
ki-i ta-qab-ba-a, um-ma \textsuperscript{et}NĀ,ŠE.S.MU hi-tu ina lib-bi li-ih-tu "how\textsuperscript{94} can you say, 'Nabû-ah-iddin may make mistakes there?'", YOS 3 17: 34–35, TCL 9 129: 33–34 (letters, 533–526, U)
\end{verbatim}

\textit{umma} is also used when quoting from a written source:

\begin{verbatim}
in-a IM.DUB šu-du-ā um-ma ŠE.NUMUN a-tar [u ma-tu] ki-i IM.DUB šu-nu a-ha-meš \textit{ip-pa-lu} "on the tablet it was made known, 'they are mutually responsible for the arable land profit [or loss] according to their tablet'", Camb 286: 7–8 (yr 5, B)
\end{verbatim}

\begin{verbatim}
ši-pir-ti il-tap-ra um-ma TŪG.BAR.DUL,MEŠ ši-na...šā ul-tu UGU FDN...\textit{ur-ra-da-nim-ma} a-na UGU FDN, u FDN, il-la-ka ki-i iq-bu\textsuperscript{1}nu\textsuperscript{1} āš-šā it-tar-da-a-nu 1+\textit{et ina} lib-bi-ši-na a-na FDN...\textit{ta-an-na-an-din} "he sent a message saying, (regarding) those...\textit{kusuš} garments which are coming down from Nanâ of Ezida for the Lady-of-Uruk and Nanâ; when they said 'as soon as they come down one of them is to be given to the Lady-of-Uruk...", YOS 6 71: 22...23 (Nbn yr 6, U)
\end{verbatim}

b) Questions and indirect questions\textsuperscript{95}

i) With question words:

\textit{akkā\textsuperscript{1}i, akkā\textsuperscript{1}i kī, kī}\textsuperscript{96}, \textit{kima}\textsuperscript{97} "how, how much" All the examples are from Uruk and all are indirect questions:

\begin{verbatim}
a-mur ak-ka-a-\textsuperscript{-i} qi-me u gi-mir KUŠ.nu-u-ṭu...\textit{tad-din} "see how much flour and all the leather...you gave", YOS 3 106: 21–22 cf. the similar YOS 3 45: 12–14 (letter, Cyr-Camb, U)
\end{verbatim}

\begin{verbatim}
ù en-na ka-la-a-ta \textit{ak-ka-a-\textsuperscript{-i}li} ki-i ka-la-a-ta hur-ṣa-am-ma šup-ra "and now it (the \textit{kusuš} garment, 3fs) has been detained. Determine\textsuperscript{98} how it has been detained and write", YOS 6 71: 24–25 (Nbn yr 6, U)
\end{verbatim}

\begin{verbatim}
LUGAL il-ta-la-an-ni ki-ma-a NĪ.GA šā FDN a-na GN i-la-a "the king has asked me how much of the Lady-of-Uruk's property came up to Babylon", JNES 1993: 30 (Nbn yr 17? U)
\end{verbatim}

\begin{verbatim}
\textit{ēkānī in ana ēkānī kī} "where to?",
\end{verbatim}

\begin{verbatim}
ul-tu šā GN a-na e-ka-a-ni ki-i al-la-ka "after Šahrinu where do I go to?", YOS 3 106: 32–33 (letter, Cyr-Camb, U)
\end{verbatim}

\textsuperscript{93} Another extract is given in b, below (ēkānī).

\textsuperscript{94} See below for kī as a question word.

\textsuperscript{95} Negation in questions is in §5e, above.

\textsuperscript{96} See a, above, for the example from YOS 3 17: 34–35 and the near duplicate TCL 9 129: 33–34.

\textsuperscript{97} Since there is no convincing evidence for the pronunciation of word final glottal stops in the NB of this period, I transcribe it thus, rather than as the \textit{kima'}/\textit{kima} of the dictionaries.

\textsuperscript{98} \textit{harasu} + \textit{šaparu} may also mean "to write exactly". See the entry on \textit{harasu} in hendiadys (II §1a iv, below).
This is the only unambiguous example of “where?” However, there may be a case for proposing that *anîn* (or *anîn*)\(^{99}\) also means “where?” in verbless clauses. The two examples in the corpora are:

(one person speaking) \(\text{um-ma ZAG.LU} \; \text{šá PN...šá e-me-e-ka a-ni-ni PN iq-bu-ú um-ma a-na PN...at-ta-din} \; \text{“the imîtru-tax of PN...your uncle, where is it?” PN said (subjunctive) ‘I have given it to PN...”’},\) \(^{100}\) Camb 329: 6...11 (Camb yr 6, B)

PN...i-qab-ba-> \(\text{um-ma I, šá GN ah-her-ri û ŞE.NUMUN ma-du ina UGU LÜ. û-ra-šá û ki-i KÜ.BABBAR i-bi-nam-ma} \; \text{i lu-1-he-ri-îš a-qab-ba-šā-šā um-ma re-e-hu šā ina UGU-ka a-ni-in 1 MANA KÜ.BABBAR ina re-e-hi-šā ina UGU-šū al-ta-kan un-ma a-lik-ma I,} \; \text{GN hir-ri “PN says (historical present) to me ‘I am digging the GN canal but the land is too much (for me), therefore give me either a conscripted labourer or silver so that I can dig it’.” I say to him (difficult) ‘the remaining balance that you owe, where is it?’ I have put another mina of silver onto his owed balance (saying), ‘go and dig the GN canal!’”}, YOS 3 17: 8...15 (letter, 533–526, U)\(^{103}\)

\(\text{minâ, minâmân} “why?”:\)

\(\text{mi-na-}’\; \text{ina IGI-ka ši-i-ni “why are they (fpl) with you?”},\) JRAS 1926: 8 (Nbn yr 10, B)

\(\text{mi-na-a} \; 13 \; \text{GIN KÜ.BABBAR a-na PN EN id-din “why did Sir give 13 shekels of silver to PN?”},\) CT 22 78: 28–30 (letter, B)

\(\text{mi-nam-ma òe-mu ul maš-šir “why isn’t (my) information released?”},\) CT 22 193: 27–27 (letter, end Nbn? B)

\(\text{mi-na-a, šá piš-ki a-na-ku û LÜ.ERÌN.ÌÌÌ-ja ni-ma-a-ta û ni-hi-il-liq “why should I or my men die or perish because of unfairness?”},\) YOS 3 106: 16–17 (letter, Cyr–Camb, U)

In the following two examples not only is there a question word but the final vowel of the verb is also lengthened.\(^{104}\) As vowel lengthening can only occur if the verb ends in a vowel, it suggests that in the first example the 2fs ending of the strong verb was still used in the interrogative form, and in the case of the second example, that the ventive singular ending survived with a verb with a strong final consonant:

\(\text{mi-nam-ma kal-bi òal-mah-has-ši-}’ \; “why are you (2fs) hitting the dog?”), YOS 7 107: 9–10 (Camb yr 1, U)

---

\(^{99}\) *anîna*, “where”, is attested in OB, Boghazköy and Nuzi (CAD *AII* p122b, *anîna*; AHw p51b, *anîn*).

\(^{100}\) *a-ni-ni* in this example has usually been translated “is for us”, by others such as Ebeling and CAD. The “us” could then be the speaker (the slave MBU) and his owner.

\(^{101}\) This seems more appropriate to the context than the *ih-her-ri* “is being dug”, of Streck (§8d, p97) and Palm (p101).

\(^{102}\) Or, “so that I can choose one (i.e. a labourer)”.

\(^{103}\) Given in AHw p51b as *anîm*, as an untranslated single entry. In CAD, this is given as the only NB attestation of *anîna* B, “now” (*AII* p221b).

\(^{104}\) Contrast this with *âš-me* in CT 22 6: 32 (in *minâ* ki, below).
mi-na-a țe-en-ka la-pa-ni-fa i-re-eq-qá-a, “why do you not keep me informed?” (literally, “why is your advice a long way from me?”), CT 22 6: 18 (letter, Cyr, B). See also lines 26,105 41 and below for lines 31–32.

Further examples are in CT 22 9: 8–9 (B) and YOS 3 64: 10 (U) (minā), Peek 22: 28–29 and TCL 13 170: 8–10 (U) (mināmma).

ana muhhi minā kī “because of what?” i.e. “why?”

ù SUM.SAR a-ga-a a-na muh-hi mi-ni-i ki-i la aș*-bu!106 “and this garlic, why is it that it is not included”, CT 22 78: 20–22 (letter, 545–527, B)

minā “what?; whatever”:

si-pir-ti ši-i šá...taš-pu-ru mi-nu-ā ši-i “that letter that you sent...what is it?”107 CT 22 48: 9...11 (letter, pre-527, B)

mi-nu-ā PN te-e-me a-na muh-hi-šú-nu iš-kun-ka qf-ban-na-an-na-šī “whatever advice PN gave to you about them, tell us”, YOS 7 70: 9–10 (Cyr yr 8, U)

minā kí “whatever”:

mi-nu-ā ki-i ina UGU-šú-nu EN i-šak-ka-na mu-hur-šú-nu-tu “whatever Sir imposes on them get from them”, YOS 3 17: 5–6 (letter, 533–526, U), cf. TCL 9 129: 6

ul-tu u,-mu šá al-li-ku mi-nu-ā ki-i ina É ép-šú šu-pu-ā mi-na-a țe-en-ka ul aș-me “since I went, why haven’t I heard news from you about whatever is happening with the baddim plot?”, CT 22 6: 30–32 (letter, Cyr, B)

mi-nu-ā ki-i PN i-qa-ba-ki-nu-šú...ep-šá.2 “whatever PN says to you, do!”, CT 22 9: 14...18 (letter, 551–527, B)

Observations

• Direct questions have the question word followed by a verbal or nominal predicate.108 The exception is anīn (if it really does mean “where?”), which comes at the end.

• In the case of indirect questions, if the question word refers to a noun the noun comes straight after it.109

• An indirect question word may be used pronominally, in which case it has to be distinguished from its direct equivalent by a predicate subordinated using kī.110

105 Which is a repetition of the above but without the lengthened vowel in the verb, i-re-eq.
106 The sign BU is not clear. Ebeling (GINBr p162), Shiff (p518) and Wunsch (II p320f) think it is meant to read la-as-uh! i.e. “why should I take the garlic out of the ground(?)”. They interpret this as a precative lassuh which would mean this is an exceptional (for NB) spelling for lassuh and also an exceptional use of the precative. Since the sign looks like ă without the final wedge I suggest the word may be as-bu from asābu, “to add”.
107 Presumably, “what does it mean?” See also line 20 for an example of minā kī.
108 minū šī, kimā n ana GN iltīk; minā kal(a)b tamahhas; minū n kas(a)b ana PN ıddin etc.
109 amur akkā‘i qēme...taddin; etc.
110 akkā‘i kī kalat hursamma supra; minū kī...iqabbākkuş epşā etc.
minū occurs in all three categories. Direct questions appear to emphasised by the circumlocution ana (muhhi)...kī. Further examples would need to be found in order to indicate whether anūn is the direct equivalent of ana ēkāni kī.

ii) Questions without question words

Often, as in the other dialects, the only way of detecting that a question is implied is the context, or, either by a lengthening of the final vowel of the final word in the sentence, or, apparently the addition of a long vowel onto the final word of the sentence:

\[i?1-te-li~\] “has he gone up?”, CT 22 6: 34 (letter, B)\n
\[um-ma PN EN GĪŠ.ŠUB.BA šu-ū AMA-ḫū el-le-e-ti a-na gul-lu?-bu? ta-bi-i “may PN have a prebend? Is his mother pure? Is he fit for the (ritual) shaving?”; YOS 7 167: 9 (Camb yr 4, U)\n
Sometimes the verb is moved to the beginning of the clause:

\[PN...iq-ba-āš-šu-nu-tu um-ma i-ba-āš-ši-i \text{lmim}1-	ext{ma šā piš-ki} “PN...said to them “is there something underhand happening?”, YOS 6 78: 14 (Nbn yr 4, U)\n
\[um-ma i-ba-āš-ši-i ū-il-ti.ME šā ZŪ.LUM.MA ī hi-pi ZAG A.SĀ.ME...ina pa-nika i-ba-āš-ši lu-ū a-šar šāk-kan te-de-e “are there IOUs for dates...break...do you have the imitti-estimates for the fields or do you know where they are?” TCI 13 181: 4–6 (Dar yr 2, U)\n
\[a-kan-na ta-ta-mar-2 šā ŠUK.HI.A ina pa-ni LŪ.ERĪN.MEŠ ia-a-nu “have you (pl) seen that there are no rations for the workers here?”, YOS 3 52: 5–8 (letter, 538–532, U)\n
\[tal-te-ma-2 um-ma ta-mer-tu ta.*mer? mi-na-a LŪ.DUMU A.KIN-ku-nu ul a-mur “have you heard that the wetland ...? Why haven’t I seen your messenger?” CT 22 9: 6–9 (letter, 551–527, B)\n
\[\text{\textsuperscript{110}}\text{As in ana ēkāni kī and ana muhhi minū kī, which are presumably circumlocutions for ēkāni and mināmā.}\n
\[\text{\textsuperscript{111}}\text{The full phrase is given in §4a i, above.}\n
\[\text{\textsuperscript{112}}\text{To which the reply is: PN...EN GĪŠ.ŠUB.BA iš-šu-ū ū AMA-ḫū el-let “PN...may have a prebend and his mother is pure”, 13...14.}\n
\[\text{\textsuperscript{113}}\text{al-lik-ku-ū ul al-lik-ku could possibly mean “am I to do it? (or) am I not?” (the signs KU and Ū do not touch) and could therefore be the only example of a negated question which does not have a question word. For negated questions (without question words) in Kuyunjik NB Ū is used and comes at the beginning of the sentence in order to emphasise the negative aspect (Woodington p325). However, the context implies that the writer is trying to get the addressee to do the errand, which means that the errand is not yet run. Therefore I assume alliku and allik are precatives. See §4 c ii above.}\n
\[\text{\textsuperscript{114}}\text{See AHw perJcu, “trickery” (p855a).}\n
\[\text{\textsuperscript{115}}\text{The scribe who copied this text has indicated a break (hi-pi ) in the original here.}\n
\[\text{\textsuperscript{116}}\text{Reading also checked by Heather Baker.}\n
49
Chapter II: Conjunctions, prepositions, adverbs and interjections; expressions of time

§1 Conjunctions

a) Uses of coordinating u and -ma:

i) The simplest way of linking strings of nouns or verbal clauses paratactically is with u "and", usually written u or it.  

a-gur-ru ku-pu-ur a-bat-tu, u tu-um-bé...i-nam-di-nu-iš-si a-ki-i EŠ.BAR šá LÚ.GAR.UMUS...ku-pur a-bat-tu, u tu-um-bé-e i-nam-di-nu [?]. "they are to give him bricks, bitumen, lime(?) and beams(?). They are to give bitumen, lime(?) and beams(?) according to the decision of the šakin tēmi of Babylon", VS 6 84: 5...9 (Nbn yr 12, B)

-ma is used to connect verbal clauses passim as in other Akkadian dialects:

ú-il-ti it-ti PN EN li-[^il] u ši-pi-rú-č EN liš-pur-ra-am-ma ú-de-e-šá lu-še-su "may Sir contract an IOU with PN and send a message to issue his items", CT 22 48: 15–19 (letter, pre-526, B)

Few examples of -ma for emphasis exist:

al-la mi-ši ina lib-bi ûe-er-ra-ku-ma ú šá EN iq-bu-ú um-ma mi-nam-ma LÚ.KIN. GI, A-ma la tal-ás-pur..."I was indeed beaten more than a little on account of this, and regarding what Sir said, 'why did you not send a messenger...?'", Peek 22: 26–29 (letter, Dar? B)

It is also unusual to find both -ma and u together:

ul-tu É PN li-ba-ku mišš-hu i-gam-mar-ma u a-na-ku am-me-rik-ki "the mayor is taking many workers. He is finishing the work stretch while I am behind", YOS 3 17: 25 (letter, early Camb? U)

ii) -ma is used with negatives as an adversative "but":

ul-tu É PN li-ba-ku mišš-hu i-gam-mar-ma u a-na-ku am-me-rik-ki "the mayor is taking many workers. He is finishing the work stretch while I am behind", YOS 3 17: 25 (letter, early Camb? U)

PN...šá PN₂ LÚ.qal-la-šá a-na 1 MANA KÜ.BABBAR...a-na PN₂...id-di-in-nu-ma PN₁ a-na É PN, la i-ru-bu... "(regarding) PN..., who sold his slave PN₁ for one mina of silver...to PN₂...but PN₂ did not enter PN₁'s house", YOS 7 114: 1...4 (Camb yr 1, U)

1 u appears to be a hapax in: 1 GUR SÈ.NUMUN...šá i-na GN a-na US.SA.DU DA lu [ x...j šá PN ğ DA/PN[x...j] "one kur arable land...in GN, at the side next to ...[x? of?] PN and next to PN,...", Camb 349: 19–21 (yr 6, B).

2 From namarkū. See chapter IV §3c.
For further examples see CTMMA 2 54+Nbn 380: 3–4 (see Note in vi, below), Dalley 76: 10 and YOS 7 7: 4.

iii) Purpose clauses

The juxtaposition of an imperative or precative (usually with -ma or the ventive+ -ma, -amma) and a precative is used in these texts to convey an order from one party to another (in English, “purpose clause” or “resultant clause”):³

\[\text{ši-kat...šá KÁ...ina mu-ši lu-up-te-ma lu-še-si-ka} \quad \text{“let me undo the bolt...in the night so that I can let you out”}, \quad 
\text{YOS 7 78: 10..11 (Cyr yr 7, U)} \]

\[\text{šu-pur-am-ma lu lil-lik} \quad \text{“write to tell me to go”, (for lullik)} \quad \text{YOS 3 69: 30 (letter, 539-526, U)} \]

\[\text{PN...iz-qa-a-ta AN.BAR i-di-ma...a-na IGI-ia šu-pur-áž-ši-im-ma a-kan-na ina qaq-qar lu-ul-ti-il-ši} \quad \text{“throw PN...into irons and...send him to me so that I can make him grovel here in the dirt”}, \quad 
\text{YOS 3 19: 24...29 (letter, early Cyr, U)} \]

\[\text{qaq-qar...a-na za-qf-pu-tu bi-in-na-nim-ma GIŠ.GIŠIMMAR lu-uz-qu-up u dul- lu ina liš-bi lu-pu-uš} \quad \text{“give (pl) me land...for planting, so that I can plant palm trees and do the work involved (literally, “therein”)”}, \quad 
\text{YOS 6 67: 6...8 (Nbn yr 4, U) cf. the similar YOS 6 33: 7} \]

\[\text{ZÜ.LUM.MA lu-še-lu-ni-im-mu (sic) a-na ŠE.BAR ina GN lid-din-}^-1 \quad \text{“let them bring dates up so that they can sell them for barley in Nippur”}, \quad 
\text{YOS 3 81: 21–22 (letter, Cyr--Camb, U)} \]

For further examples see ibid.: 39–40 and YOS 3 200: 42–44. There is one example which uses a negative verb in the resultant clause:

\[\text{en-na n KÚ.BABBAR...šu!-bi-la-nim-ma LÚ.ERIN.MEŠ ina bu-ba-a-ta la i-mu-}^-1 \quad \text{“now send me n silver so that the workers do not die of starvation”}, \quad 
\text{JAOS 36: 20...23 (letter, 538–532, U)} \]

The 1cpl forms use what looks like the preterite, but is in reality the cohortative (see I §4.c i, above):

\[\text{mi-nu-á PN te-e-mu a-na muh-hi-šu-nu iš kun-ka qš-ba-na-an-na-ši-ma ni-pu-uš} \quad \text{“whatever proposal Gobryas set you regarding them, tell (ventive sg!) us so we can implement it”}, \quad 
\text{YOS 7 70: 9–10 (Cyr yr 8, U)} \]

\[\text{a-ni-ni ŠUK.HLA ú Náp.BA bi-in-na-an (sic) ši-ma ma-as-sar-tu...ni-is-sur} \quad \text{“give us rations and supplies for us to do the watch”}, \quad 
\text{YOS 7 156: 6...10 (Camb yr 3, U)} \]

Other examples using the 1cpl are YOS 3 96: 16–19 and the similar but broken TCL 9 100: 18–20 (both Uruk letters).

³ For comments on the precative forms see I §4 b, above.
There are two examples which have the same subject in both the command and the purpose:

\[ ni-ik-su ni-ik-ki-si-ma ul-tu \, ki-li \, nu-us \rightarrow \, \text{LU.ERIN.MEŠ} \, \text{sá ina} \, \text{lib-bi} \, \text{it-ti-i-ni} \, \text{nu-sé-si} \, \text{"let us make a break to get out of the prison and let the workers who are in there with us, out"}, \text{YOS 7 97: 8–9 (Camb acc, U)} \]

\[ a-bu-uk \, a-na \, \text{PN} \, i-din-sá \, a \, \text{<<-na>>-di UGU \, sá} \, \text{a-ha-meš} \, \text{nim-ma-ru-ma} \, \text{ES.BAR-šú} \, \text{it-ti} \, \text{PN} \, \text{ni-sak-ka-nu} \, \text{"take her and give her to PN until we see one another in order to make a decision with PN regarding her"}, \text{AnOr 8 56: 15–16 (Cyr yr 7, U)}. \]

The use of the present \text{nisakkanu} rather than \text{niskunu} may be as a result of its following the present \text{nimmaru}. Alternatively, it may just be a statement of fact, "until we see...and make".

Purpose clauses are more common in the Uruk texts.³ Three of the letters do not use a connecting -ma; YOS 3 79 uses \text{à}⁵ YOS 3 17: 6–7 and YOS 3 52 (which has two examples) have asyndetic links:

\[ \text{ŠE.BAR} \, \text{ina} \, \text{muh-hi} \, 1+en \, 1, \, \text{in-na-niš-sú lu-sé-la} \rightarrow \, \text{LU.ERIN.MEŠ} \, \text{ina} \, \text{la} \, \text{ŠUK.HI.} \, \text{i-sa-am-mu-ú kap-du} \, \text{KASKAL.II} \, \text{a-na} \, \text{GIr.II} \, \text{šú} \, \text{ku-nan-á} \; \text{lik-sú-du} \, \text{"give him the barley by river transport}^{6} \text{for him to bring up. The workmen are offering from lack of rations. Quickly send him on his way so that he may arrive"}, \text{YOS 3 52: 13–20 (letter, 538–532, U)} \]

The only examples in the Babylon corpus are:

\[ \text{a-na} \, \text{PN} \, \text{EN} \, \text{li-šš-pu-ru...PN} \, \text{EN} \, \text{li-šš-pu-ru-am-ma} \; \text{(sic)} \, \text{a-kan-nu} \, \text{it-ti-sú} \, \text{li-id-bu-ub} \, \text{"may Sir (a woman!) write to PN... May Sir (!) send PN} \, \text{for him (?7) to deal with him here"}, \text{CT 22 200: 15–18 (letter, Nbn? B)} \]

and the following, where a woman clears a debt she is unable to pay by relinquishing the land she gave as a pledge:

\[ \text{ŠE.NUMUN-ú-a} \, \text{šá...maš-ka-nu} \, \text{sa-ab-ta-ta} \, \text{NÍG.BA} \, \text{qi-sá-an-ni-ma} \, \text{DAGAL} \, \text{A.ŠA.MEŠ} \, \text{lu-ud-dak-kam-ma} \, \text{ŠE.NUMUN} \, \text{šú-a-ti} \, \text{pa-ni-ka} \, \text{li-id-gu-ul} \, \text{"(regarding) my arable land that you have taken as a pledge, give me a gift so I can give you the extent of the fields and that arable land can belong to you"}, \text{Cyr 337: 9...13 (yr 9, B)} \]

---

³ Other examples from the Uruk corpus are: YOS 3 19: 27–29 and 39–40, YOS 3 200: 42–44.
⁵ \text{um-ma} \, 1 \text{SILA.ĂM ZULUMMA a-na} \, \text{su-mu-ut-tu}, \, \text{lud-da-šš-šú-nu-tu} \, \text{à} \, \text{dul-lu} \, \text{li-pu-šú}. \, \"(I said) 'let me give them one sila of dates each as a sumuttu-ration in order for them to do the work'", 9–11 (letter, 539–526, U). (See V §3 f for \text{nadānu} sound changes with personal pronoun suffixes.)
⁶ Literally, “by a river”. Here, 1+en is an Aramaism, meaning “a, a certain”.
⁷ The writer of this letter has made a few spelling errors and although the introduction is rather broken he appears to be writing to a woman, addressed as EN throughout. Although one would expect \text{ludbub} for the 1cs, the context suggests “I” could also be meant.
iv) Hendiadys

This is a term now applied by Assyriologists to the coupling of two verbs (usually with -ma) to express a single compound idea which in English, French or German, for example, could be conveyed otherwise by means of a single verb with the addition of an adverb or a present participle used as an adverb. The term hendiadys has its origins in Classical Greek and Latin philology where it was used in reference to the practice in rhetoric of replacing a noun and adjective in combination by two nouns linked paratactically by a conjunction. According to Kraus it was first applied to Akkadian (and thus for the first time to a Semitic language) by San Nicolò who recalled the observations earlier scholars had made on the taru + ragāmu or tāru + paqāru coupling and applied his own description 'als ḫālādāru ḫuūfū im Sinne von "wieder klagen". This then found its way into common usage among Assyriologists. The most detailed study on the subject is that made by Kraus (op. cit.) who prefers to use “Koppelung” instead.

In the texts under analysis here, hendiadys most often refers to a process of completing or repeating an action, and its two verbs are usually connected in paratactic coordination by -ma or the ventive+-ma, i.e.-amma. The first verb fulfils the function of the adverb, with the main verb coming at the end of the phrase. Both verbs must be either past (i.e. pret+pret) or present-future (present+present). The second verb is not infixed with a -t-, as would otherwise be expected if it were speaking of an action happening in consequence to the action of the first. Pairs of imperatives or infinitives may also be used, with the main component again following the “adverbial” component. (See appendix 1 below for an exception, maybe unique in Akkadian, to the paratactic rule.) Appendix 2 to this section provides information on some of the other Semitic languages to indicate that these features are not limited to Akkadian. In some cases the first verb is separated from the second by another clause.

---

8 E.g. Latin vulgus et multitudo “the common herd”.
11 See ḫī in III §2, below.
**gamāru, quttû, sullumu “(to do) in full, completely”:**

50 GUR ŠE.BAR MU 8.KÂM û 50 GUR MU 9.KÂM...ina muh-hi me-e GAL.MES i-gam-mar-û-ma...i-nam-di-nu “in year 8 they are to give 50 kur barley in full at high water, and 50 kur in year 9”, YOS 6 90: 9...12 (Nbn yr 7, U)

a-di ṭūp-pi a-na ṭūp-pi i-gam-ma-ru-ma iḫ-te-ru-ḫ “they will pay completely within the prearranged time”, Cyr 322: 5–6 (yr 8, B)

[tap]-tu-ū a-di qi-lit MN û-qa-at-tû-ma i-he-ri “he is to dig the newly opened land completely by the end of Addaru”, VS 5 49: 21–22 (Camb yr 4, B)

re-eh-tu, ŠE.NUMUN-šû u-šal-lim-ma id-di-nu “he gave the rest of his arable land in full”, Joannes Strasbourg 1: 8 (Nbn yr 8, B)

**harāṣu “to do exactly”:**

ù en-na ka-la-a-ta ak-ka-a-ḫēl ki-i ka-la-a-ta hur-ša-am-ma šup-ra “and now it (the kusîru garment, 3fs) has been detained. Write exactly how it has been detained”, YOS 6 71: 24–25 (Nbn yr 6, U)

penû “to receive in advance”: 13

2] MA.NA KÜ.BABBAR...i-pe-en-ni-ma i-šal-lim... “he is to receive 2] minas of silver fully in advance”, Nbn 356: 36...37 (yr 9, B)

**sebû “to want, to be tempted to”:**

ár-ki PN iš-be-e-ma 1 KUR ŠE.NUMUN ina lib-bi a-na PN...a-na nu-duṭ-ni id-din-nu “afterwards, PN wanted to give one kur of arable land from out of that to PN as a dowry”, Joannès Strasbourg 1: 5...6 (Nbn yr 8, B)

ul i-sab-bi-ma PN a-na KÜ.BABBAR ul i-nam-din û a-na IR ul i-her-ri “PN is not to be tempted to sell her off or marry her to a slave”, YOS 7 66: 18–19 (Cyr yr 7, U)

**sahāru, šanû “(to do) again”:**

ù āš-šû ma-ti-ma la sa-ha-ri-im-ma a-na UGU LÚ-ta šu-a-ta la ra-ga-mu...tup-pi iš-ju-ru-ma “so that there would never be another claim made regarding those servants...they wrote a tablet”, Nbn 668: 17...20 (yr 12, B). Note that these two infinitives function verbally in this subordinate clause.

i-ši-ni-ma iq-bi um-ma... “he spoke again, thus...”, YOS 7 42: 5 (Cyr yr 5, U)

**turrû “(to give) back, (to put) back”:**

(3 animals) PN ū-tir-ma a-na PN...id-din “PN gave (the 3 animals) back to PN”, YOS 6 137: 22...23 (Nbn yr 7, U)

---

12 CAD harāṣu A, 4 a, p94a. harāṣu means “to search out, to make clear, determine etc.” in the NB of my corpora.

13 AHw p822b.
ZU.LUM.MA te-ri-ma a-na PN i-di-in “give the dates back to PN”, CT 22 127: 17–19 (letter, Dar yr 17? B)

PN i-qab-ba-a um-ma KÜ.BABBAR te-ri-ma a-na qu-up-pu ú-su-uk “PN said (historic present) to me ‘put the silver back in the box’”, YOS 6 235: 9–11 (Nbn yr 12, U)

Some further examples using other verbs can be seen in the following: YOS 3 69: 18–19, YOS 3 79: 31–32, YOS 7 98: 15–16 (all U), Nbn 356: 37 (B).

1: “Hypotactic ḫendiadys” with subordinated clauses: the use of clauses subordinated by kī

A comparable construction appears in the NB of these texts where the two verbs, instead of being paratactically linked, are expressed as a subordinated verb with kī followed by a main verb. As with standard clauses involving kī “when” (see subordinating conjunctions, III §2f, below), the main verb is infixed with -t-. The word order is the same as for paratactic hendiadys:

(PN i-qab-ba-a um-ma KÜ.BABBAR te-ri-ma a-na qu-up-pu ú-su-uk) KÜ.BABBAR ki-i ú-tir-ru a-na qu-up-pu at-ta-su-uk “(PN said to me ‘put the silver back in the box’).” I put the silver back in the box”, YOS 6 235: 9–12 (Nbn yr 12, U)

KÜ.BABBAR a’ 3 MANA ina a-dan-ni-šu PN a-na PN₂ it-ta-din ú-il-ti i u LÚL-tú PN₃, ki-i ú-tir-ru a-na PN it-ta-din “PN has given the (aforementioned) three minas of silver to PN₁ within the deadline” and PN₃ has given the IOU and the slave back to PN”, Dar 319: 9–13 (yr 12, B) cf. OECT 10 105: 10–11 (Nbn yr 9, B) and the broken but probably identical VS 4 87/88: 12–13 (Dar yr 1, B). See also Nbn 832: 10–11 (yr 15, B), Liv 19: 18–19 (Camb yr 3, B) and Dar 447: 10 (with plural verbs. Yr 17, B)

KÜ.BABBAR ki-i a-hi-i-tu a-na PN...at-ta-din “I checked and gave the silver to PN...”, JRAS 1926: 6...8 (Nbn yr 10, B)

---

14 As opposed to “paratactic”. “Subordinating” would be another description.
15 Cited above.
16 Which occurred two days before this was written.
17 See CAD hàtru (p161b) for hendiadys with nadanu “to pay the full price”. The Uruk letter (not in my corpus) cited by CAD as not being a hendiadys may perhaps read: KÜ.BABBAR ša ina pa-ni-la a-na PN ki-i a-hi-tu at-ta-dil-is-su (reading at! for la) “the silver that I had I checked and gave in full to PN”, BIN 1 94: 36–37. The proposed reading la ta-di-is-su “you did not give to him”, would be an exception to the third person by which the writer addresses the receiver.
The examples can be translated in the same way as paratactic hendiadys. This feature appears to be unique to later NB. It is not found by Woodington or by Kraus.

2: Hendiadys in other Semitic languages: Arabic, Hebrew, Aramaic and Syriac

Examples of hendiadys in the main Semitic languages may be found in GVG II §§292–301, 471–484. §296 (p478) deals with Akkadian. For clarity of comprehension the main verb is underlined.

a) Arabic

See Wright (1898, §140, p287f) in “verbal appositives”. Two types of hendiadys are found:

i) The commonest use of hendiadys is with ‘āda “to return”, i.e. “continue”, cf. tāru. Also used in modern literary Arabic (see Wehr, 1976, p653b), the verbs are usually linked with w-.

\[
\text{wa}‘\text{ā dat il-fitanu waqā‘at} \quad \text{“and disturbances broke out again”}
\]

In older classical Arabic the link between the verbs may be fa-:

‘āda fasa‘ala \quad \text{“he asked again”}

ii) Wright notes also that a verb + ʿahsana or verb + ʿatāla means respectively, “to do something well” or “for a long time”. Note that in these cases the modifying verb comes after the main verb, a pattern which reflects the VSO order in Arabic:

\[
\begin{align*}
\text{yanna} & \quad ʿ\text{ahsana} \quad \text{“he sang well”} \\
\text{saĝada} & \quad \text{fa}‘\text{atāla} \quad \text{“he sat for a long time”}
\end{align*}
\]

b) Biblical Hebrew

Hendiadys is most common with the verb “to go back” šāḥ (יָשָׁח). The examples referred to in BDB (p998, entry 8) are mostly in the historic present and the main verb is the second element. It is interesting to note that when the verbs are linked syndetically, w- precedes both verbs:

---

18 Better qualified scholars will no doubt recognise it in other Semitic languages, e.g. Ge‘ez aḥāzku enṭāgar \text{“I began to speak”} (Bergsträsser, §5/1.3, p127). In fact the same hendiadys is also used in modern literary Arabic (‘aḥada + imperfect, Wehr p7a).
c) Aramaic and Syriac

Hendiadys is not attested in Old Aramaic apart from the perfect ‘ny ‘mar “he answered, saying”:\(^\text{19}\)

\[‘nh ‘mar ‘mar ‘nz\] “the leopard answered, saying to the goat”, Ahiqar: 118.

See also lines 119, 121.

Many examples for Syriac are found in Phillips (1866, p174f), where verbs are used for “Adverbs with or without a conjugation” (\textit{sic}). Some examples are given below. Note the similarity to Arabic in the use of ‘asga\(^\text{20}\)+verb and ‘awsep +verb “to do much” and “to do again”, respectively:

- d’asga šgal “who has taken much”, 2 Cor 8: 15, cf. Phil 2: 9
- ‘awsep wšaddr “he sent again”, Luke 20: 11, 12
- lā nettawsap netmallal ‘amhūn “it is not to be spoken to them any more”\(^\text{21}\), Hebr 12: 19
- ‘štn wšilph 1’grt “he changed\(^\text{22}\) the letter carefully\(^\text{23}\), Bar Heb.: 100

\textit{Observations on hendiadys in the above languages}

Apart from Arabic, which has developed a secondary pattern with the “adverbial” verb after the main verb, the other main Semitic languages exhibit the order: “adverbial” verb followed by “main” verb. It must not be forgotten that in Arabic,

\[^{19}\text{See Segert (7.4.6.3, p427).}\]
\[^{20}\text{Cf. Akkadian šaturu in hendiadys “to make...more than, to make surpass”. See Kraus (1987) p20.}\]
\[^{21}\text{Both verbs are passive.}\]
\[^{22}\text{With proleptic suffix -h, a common feature in Syriac.}\]
\[^{23}\text{Probably ethpa’al of šn’. See HAL 972–973.}\]
the verb comes at the beginning of the sentence, which could explain the appearance of ii, above. This leads to an interesting observation. Arabic keeps its verb at the beginning of the sentence, the positioning of the verb is more fluid in Hebrew, Aramaic and Syriac, and the NB under scrutiny here keeps it at the end. Thus, the retention of the “adverbial” verb followed by “main” verb order throughout these Semitic languages and in the Arabic in i, above would indicate that hendiadys, with its consistency in verb order, must have been a part of Proto-Semitic itself and that this verb order offers support to those who believe the order in PSem was SOV, as in Akkadian.

b) Disjunctive conjunctions expressing “or”, “either...or”

i) ā:

*a-na UGU ši-pir-tu, ū mar šip-nî EN lîd-dîn* “may Sir provide a message or messenger regarding this”, CT 22: 73: 25–27 (letter, early Dar, B). See below for a similar phrase using kī...kī.

KŪ.BABBAR KŪ.GI u min-ma PN a-na PN, id-di-a-nu “silver, gold, or whatever PN gave to PN”, YOS 6: 175: 6–7 (Nbn, yr 12, U)

ii) ḫû, ū ḫû:

IM.DUB nu-du-nu-ū lu-ā IM.DUB KI.LAM šā PN kul-lîm-lîn-nî-ma īna pa-nî-ka lu-ṣar-uṣ “show me (2fs) either the dowry document or the purchase document for PN so that I can leave him to you”, TCL 13: 179: 12–13 (Camb yr 3? U)

ina u-mū ā-du-ā lu-ā mim-ma šā ār-ki ā-de-e šā is-sî-nî-qu-ma...ul-tu lîb-bi īṣ-ṣu-ā lu-ā SU.ÎI ša!-bit-ti īna SU.ÎI-ṣû it-ta-aṣ-ba-tu “if ever any item, or anything else coming after the time the items that were checked and (after the time) he took them from there, or if any stolen material is seized in his possession (he will bear the penalty), TCL 13: 142: 7...12 (Cyr yr 7, U)

ZAG A.ŠÂ.Å.ME...i-na pa-nî-ka i-ba-āṣ-šī lu-ā a-ṣar šak-kan te-de-e “do you have the imittu-estimate for the fields or do you know where it is?” TCL 13: 181: 5...6 (Dar yr 2, U)

*a-di UD 5.KÂM šâ MN PN...KÛ.BABBAR i-na-āṣ-šâ-ī ū lu-ā LÛ-tû i-ba-kám-ma a-na PN, i-nam-dîn “by x date PN is to fetch the silver or bring the servant and give (either) to PN”*, Camb 165: 2...5 (yr 5, B)

iii) ḫû...ā ḫû

*ina u-mū lu-ā LÛ.mu-kin-nu lu-ā LÛ.bi-qu a-na PN u PN, uk-tîn-nu “on the day that either a witness or an informer convicts PN and PN...”, YOS 6: 203: 1–2

24 And Ge’ez, according to the example given above.
(Nbn yr 12, U) Similar examples are in TCL 12 106: 1–4  
YOS 6 122: 1–4  
(both Nbn, U) cf.

\[ \text{ina } u_{-}mu \text{ LU.mu-kin-nu lu-u LU.ba-ti-iq PN...uk-tin-nu lu-ú KU.BABBAR lu-ú KU.Gi ina ŠU.II PN, ú PN,...im-hu-ru... “on the day that either a witness or an informer accuses PN of receiving either silver or gold from either PN, or PN, ...}
\]

YOS 6 191: 1...5 (Nbn yr 12, U)

\[ \text{GIŠ.SUB.BA } šu-a-tu, a-šar PN lu-ú a-na KU.BABBAR lu-ú a-na GIŠ.BÁN a-na mam-ma i-nam-di-nu PN, ...a-na LU.mu-kin-nu-ú-tu ina li-bi a-šib “(regarding) that prebend, in the event that (literally, “wherever”) PN gives it to someone either/silver or as a farm-lease, PN, ...is to sit as a witness in that case”, VS 5 57/58: 11–12 (Barziya, B) \]

\[ \text{lu-ú ú-il-ti lu-ú ri-ik-lSa } [?]? lu-ú IM.DUB.MEŠ a-šar ša i-ba-âš-šu-ú a-na-âš-ša-am-ma a-nam-dak-ka “either an IOU or a contract or records, wherever they are, I shall bring and give to you”, JRAS 1926: 13–15 (Nbn yr 10, B) \]

iv) \( \dddot{\text{u }} \text{kī} \):

\[ \text{ba-ab-tu...ina IM.DUB-i-ni šu-tur u ki-i KILAM ina ŠU.II-i-ni e-pu-us “either write the balance down on our tablet (as owed) or buy it from us”, VS 5 20: 7...9 (Nbn yr 1, B)} \]

\[ \text{ina UGU LU.u-ra-Šu û ki-i KU.BABBAR i-bi-nam-ma lu-he-ri-iš “therefore, give me a stand-in or silver so that I can dig it”, YOS 3 17: 11–12 (letter, early Camb? U)} \]

v) \( \dddot{kī...kī, kī...ū kī} \):

Separating nouns:

\[ \text{kap-du ki-i ŠE.BAR u } [kī\dddot{1}-i KU.BABBAR šu-bi-la-a-ni “quickly send me either the barley or the silver”, YOS 3 64: 14–16 (letter, 538–534, U)} \]

\[ \text{ki-i ŠE.BAR u ki-i mim-mu ma-la pa-ni-ka ma-hir a-na AD-ia a-nam-din “I shall give to my ‘father’ barley or whatever pleases you”, CT 22 182: 20–22 (letter, pre-526, B)} \]

Separating clauses:

\[ \text{ki-i at-ta ta-at-tal-ku ina } [tī\dddot{1}-me-ka a, ki-i dul-lu te-ép-pu-us ki-i pa-ni-ka ma-hir šu-pur-am-ma lu lîl-lik u at-ta al-ká-ma dul-lu e-pu-us Únclear. May mean “if you come that is up to you, or you can do the work. If you want, write to me to go and you yourself come and do the work”, YOS 3 69: 26–31 (letter, 539–526, U)} \]

---

25 Which continues: ša ŠE.BAR ina ŠU.II LU.APIN lu-u ina ŠU.II LU.EN pi-qit-tu, ša FDN im-hu-ru. “...of receiving barley from either the farmer or from the bēl piqitti of the Lady-of-Uruk”.

26 cf. the same phrase in the near duplicate TCL 9 129: 11–12: ina UGU LU-u-ra-šu û KU.BABBAR i-bi-nam-ma I...lu-her-ri.

27 lullik is expected in this dialect. See a iii, above.
vi) Anomalies. The following two examples are possibly a result of Aramaic influence. \( ki\-\text{ša} \) may be a calque on Aramaic \( k\-\text{dy} \). The examples show Aramaic influence:

\[
\text{ki-\text{ša PN ő ki-\text{ša LÜ.SUKAL EN liš-šá-am-ma... literally, \text{either (that)} PN or that Sir's court minister bring it...} CT 22 73: 20-21 (letter, early Dar, B)}
\]

According to GAG §122a \( la...la \) means "neither...nor":

\[
\text{pu-ut la \text{IR LUGAL-ú-tu la DUMU ba-nu-tu mu-ru-qa u la pa-qa-a-ru šá \text{PN PN... na-si \text{PN...is responsible for there not (being any complaint about the) slave-status or freeperson-status nor any annulment or claim regarding \text{PN (a sold slave)})}; VS 5 73: 7 (Dar yr 10, B).}
\]

Note

It must be borne in mind that when a clause with (English) "or" is negated (i.e. meaning "neither...nor") both alternatives are precluded and therefore negated "or" cannot be treated as a disjunction:

\[
\text{zi-it-ti šá PN ina Ê ú KÜ.BABBAR ia-a-nu \text{there is no share for PN in the house or the silver}; Nbn 85: 8-9 (yr 2, B)}
\]

\[
\text{PN ãš-šá-ti a-hu-uz-ma DUMU u DUMU.MUNUS la tul-du \text{I took PN as a wife but} she did not bear a son or daughter, CTMMA II 54+Nbn 380: 3-4 (yr 9, B)}
\]

vii) Repetition or non-repetition (asynthetic parataxis) of conjunctions

Usually \( u \) comes between the last two elements in a string of nouns or verbal clauses but it is sometimes omitted i.e. there is asynthetic parataxis:

in strings of nouns or nominal phrases:

\[
\text{PN PN, ã-ba-mu-ú \text{(and) PN will look for PN}, YOS 7 1: 14-15 (Cyr acc, U)}
\]

\[
\text{2 ITI ú 20 UD PN 2 ITI ú 20 UD PN, 2 ITI ú 20 UD .MEŠ PN, ina ITI.MEŠ a, 8 šul-lul-ta-a-ta ši-zib i-sáb-ba-tu \text{two months and 20 days (for) PN, two months and 20 days (for) PN, two months and 20 days (for) PN, in those aforementioned 8 months, each will deliver one third share of milk}; YOS 7 79: 13-15 (Cyr yr 8, U)}
\]

---

28 Adversative -\( \text{ma} \). See a ii, above.

29Cf. VS 6 104: 7-10 (Cyr yr 7, B).
In the following standard legal phrase the disjunctive conjunctions are often omitted:

\[ pu-ut \ si-hi \ i \ pa-qi-ra-nu \ IR \ LU\-GAL-tu \ DUMU \ DÜ-tu \ PN \ na-ši \ “PN \ is \ responsible \ for \ any \ objection \ or \ claim \ regarding \ the \ state \ of \ royal \ slave \ or \ of \ free \ man”, \]

CTMMA 1: 9–11 (Nbn yr 2, B)

They are also omitted between single pairs of numbers:

\[ 1-šū \ 2-šū \ a-na \ muh-hi \ a-na \ EN-fa \ šš-pu-ru \ “I \ have \ (already) \ written \ once \ or \ twice \ to \ Sir \ about \ it”, \]

Verbal phrases:

\[ a-bat-tu, \ ina \ lib-bi \ i-na-as-suk \ GIŠ.GIŠIMMAR \ TILMUN \ i-zaq-qap \ ši-kit-tu, \ išak-ka-an \ “he \ is \ to \ clear \ out \ the \ stones, \ plant \ Dilmun \ datepalms \ (and) \ lay \ (garlic?) \ beds”, \]

YOS 6 33: 9–10 (Nbn yr 3, U)

\[ PN...si-mir-re-e-šū \ AN.BAR \ ip-ta-tar \ il-ta-su-um \ “PN...undid \ his \ (own) \ iron \ handcuffs \ (and) \ ran \ away”, \]

YOS 7 88: 17 (Cyr yr 2, U)

\[ pat-ri \ AN.BAR \ iš-ku-su \ ik-nu-ku \ u \ ina \ é-an-na \ ip-qi-du \ “they \ bound \ (and) \ sealed \ the \ iron \ dagger \ up \ and \ deposited \ (literally, \ “entrusted”) \ it \ in \ Eanna”, \ ibid.: \ 22 \]

(cf. YOS 7 102: 27)

There is also no repetition in the following much used legal phrase, with the meaning (or similar) “he is to keep the roof sound and do the repairs to the foundations”:

\[ ú-ri \ i-ša-ni \ bit-qa \ šá \ a-sur-re-e \ i-šab-bat \ Cyr \ 177: \ 16 \ (yr \ 4, \ B) \]

\[ bat-qa \ šá \ a-sur-ru-u \ ta-šab-bat \ ú-ru \ ta-ša-an-nu \ (with \ a \ woman \ as \ subject) \ VS \ 4 \ 66: \ 10–11 \ (Cyr \ yr \ 8, \ B) \]

\[ ú-ru \ i-ša-an-na \ bat-qu \ šá \ a-sur-ru-ū \ i-šab-bat \ YOS \ 7 \ 2: \ 8–9 \ (Cyr \ acc, \ U) \]

---

30 An exception is VS 5 35: 8, where \( u \) separates the last two elements (Cyr yr 1, B).

31 For further examples of this, including slight variations on the theme, see Camb 117: 6–7, Camb 97: 8–10, VS 5 82: 7–8, Dar 378: 6 (all Babylon).
§2 Prepositions, phrases and adverbial phrases functioning as prepositions

Most prepositions are nominal in origin. These are the ones which can take suffixes. Those prepositions which cannot take suffixes form compounds with other nouns on which the suffixes are then hung. This is particularly notable in NB, which uses many compounds involving libbu, muhhu and pānu, for example. The increase in the number of such compounds may be due to an increasing demand for a preciseness of reference. As in the earlier Akkadian dialects, the nominal elements are in construct. It will also be seen that many of the prepositions function also as conjunctions or adverbs, etc. Adverbial phrases used as prepositions are included below.

a) adi

i) “until, up to (and including), by (usually with time or a date), for (a time period)”:

\[ a-di \text{ } u-e \text{-} m \text{-} u \text{ } a, \text{ } ul \text{ } iq\text{-}it \text{ (or, } iq\text{-}tu! \text{) “up to (and including) today it is still not finished”}, \text{ YOS } 3 \text{ } 19: \text{ } 6\text{-}7 \text{ (letter, early Cyrus, U)} \]

\[ \text{ù at-tu-nu } a-di \text{ } UD \text{ } 25.\text{KAM } šā \text{ } MN \text{ } a-na \text{ } GN \text{ } al-ka-} \text{ “and you, go to Babylon by the 25th of Nisannu”}, \text{ TCL } 13 \text{ } 152: \text{ } 16\text{-}17 \text{ (Camb yr 2, U)} \]

\[ a-di \text{ } UD \text{ } 5.\text{KAM } šā \text{ } MN..\text{KU.BABBAR } i-na-\text{dāš} \text{-} šā-} \text{ “he is to bring the silver by the fifth of Abu”}, \text{ Camb 165: } 1\text{..5 (yr 3, B)} \]

\[ a-di \text{ } qf-it \text{ } MU.AN.NA...\text{a-na } NI.G.GA \text{ } i-t-ti-ir \text{ “by the end of the year he is to pay (it) to the Eanna property”}, \text{ TCL } 13 \text{ } 182: \text{ } 24 \text{ (Dar yr 2, U)} \]

\[ na-bal-kat-ta-nu \text{ } a-di-i \text{ } 2-ta \text{ } MU.AN.NA.MEŠ \text{ } 10 \text{ } GI.N KŪ.BABBAR \text{ } ina-an-din \text{ “(any) defaulter must pay ten shekels of silver within two years”}, \text{ TCL } 13 \text{ } 187: \text{ } 9\text{-}11 \text{ (Dar yr 16, B)} \]

\[ a-di \text{ } 3-ta \text{ } MU.MEŠ \text{ } i-di \text{ } Ė PN \text{ } a-na \text{ } PN; \text{ } ul \text{ } i-mah-ri \text{ “for three years PN is not to receive house-rent from PN; or PN;”}, \text{ Dar } 395/396: \text{ } 16\text{-}17, \text{ see also line 9 (Dar yr 3, B)} \]

---

32 See in particular GAG §114f. The exceptions are adi (see the following note and the section on oaths), ana, ina, (a)ki, kima.

33 Cf. Woodington, p169. San Nicolò implies that this was happening by the end of the seventh century in his discussion about improving the identification of people in economic texts as more legal activities were recorded (BR 8/7, p2f. n1).

34 For prepositions functioning as conjunctions or adverbs, q.v.

35 Usually spelled a-di. In the Uruk corpus there are 19 instances of adi used as a preposition. The ratio of a-di to a-di-i is 15:4. In the Babylon corpus the ratio in 22 examples is 17:5. In promissory oaths Babylon sometimes use the formula ki-i a-di-i-(a) (III §4c, below), which Uruk spells ki-i a-di. See the discussion at the end of III §4c for the derivation of ad(i)/ad(i) a. ad the preposition does not appear to be the source.

36 See V §2a, below, and Streck (1995) §28 23–26 for the reading n-ta and not n.TA.
a-di qi-ti šá MN “until the end of Ulûlu”, BE 8 47: 7 (Nbn yr 5, B). Note the use of adi + infinitive in lines 3-4: a-di-i pa-ra-su tu-šak-ka-al-la “she is to nourish (the baby) until weaning time (literally, “separation”).

ii) The sense “which includes, in addition to” is rare in these texts. Both examples come from the reign of Nbn:

9| MA.NA KU.BABBAR a-di 2| MA.NA KU.BABBAR... “9| minas of silver, which includes 2| minas of silver...”, Nbn 356: 7-8 (yr 9, B)

(arable land which was leased to them) PN u PN, a-di-i ú-ša-ti.MEŠ-ša-nu i-na é-
an-na i-nam-di-nu “PN and PN, will bring (the arable land37 leased to them by
Eanna) along to Eanna along with their IOU’s”, TCL 12 90: 13-14 (Nbn yr 7, U)

iii) adi in I+ en a-di n “n-fold”: The expression of “n-fold” is usually “1+en n” (see V §2, below). Streck (§68b, p72) cites YOS 7 196: 5-8 (Camb yr 8) as the only example of 1+en adi but there is another example in the Uruk corpus:

KI UZ.TUR.MUŠEN 1+ en a-di 30 ku-um UZ.TUR.MUŠEN.ME a, 2 e-li PN, ...e-li ša-nu i-pu-su “with38 (each) duck they decided on a 30-fold charge for
the aforementioned two ducks, against PN,”, Iraq 13: 22...26 (Camb yr 2, U)

The only Babylon examples use the logogram TA.ĀM:

a-di 12 TA.ĀM i-ta-nap-pal39 “he will repay twelve-fold”, VS 5 38: 38 (Cyr yr 6, B) cf. a-di 12 TA.ĀM i-ta-na-ap-pa-al Dar 26: 28 (yr 1, B)

For adimuhhi see muhhi.

b) akī, occasionally ki, kirma “equivalent to, according to, (functioning) as”, is not very common.40 See also minū kī sub questions and indirect questions:

a-ki-i pi-i ša-nu “according to what they said”,41 YOS 6 78: 18–19 (Nbn yr 4, U)

mu-ša-hi-nu...u ki-šuk-ku...ša PN...ša a-ki-i 7 GĪN KU.BABBAR ša ina pa-ni
iPN iš-ku-nu... PAP 17 MA.NA KI.LAL mu-ša-hi-nu UD.KA.BAR a ki-šuk-ku
UD.KA.BAR ina IGI iPN, a-ki-i KU.BABBAR-ša šak-nu... “a boiler and a ...? of
PN’s, worth seven shekels of silver, which he put at the disposal of iPN...
altogether a total weight of 17 minas for the bronze boiler and the bronze ...

---

37 Meaning, presumably, the pertinent documents.
38 The meaning of KI here is unclear. I have interpreted it as itti but it is possibly an erroneous KI of place after the preceding gentilic, LŪ.UNUG KI-a-a or even a haplography of akī. However, KI is at the beginning of its line.
39 Frozen legal expression. See V §2e, below.
40 Usual spellings are a-ki-i, ki-i, ki-ma or GIM.
41 Two rather difficult examples of this idiom are seen in YOS 3 22: 13–14 and 20–21: mim-ma a-ki-i pi-i šā LŪ.U.NMES EN la il-lak...mim-ma a-ki-i pi-i ša mam-ma la tal-la-ki “in spite of what people say, Sir in no way is to go...in no way, whatever anyone says, are you (2fs) to go” (letter, early Nbn, U). (The changes of person in this letter are discussed in appendix §4 b.)
were put into the possession of PN₂ as (being) equivalent to her payment (literally, silver)\(^4\), Nbn 310: 1...14 ((yr 8, B)

\[ a\text{-}ki \text{ e\text{-}te\text{-}qu} \] GN “according to the rate in Šahrīnu”, Nbn 344: 3 (yr 9, B)\(^4\)

8 GIN KU.BABBAR \[ a\text{-}ki\text{-}i \text{ a\text{-}t\text{-}ri} \] “eight shekels of silver as an additional settlement\(^4\), VS 5: 38: 28-29 (Cyr yr 6, B) cf. TCL 13 190: 14, ù f21 MA.NA KU.BABBAR \[ (\text{ki\text{-}i \text{ a\text{-}t\text{-}ri} \text{ id\text{-}din\text{-}šú}) \] (Dar yr 12, B)

\[ a\text{-}ki \text{ da\text{-}a\text{-}ta} \] šá LUGAL ū\text{-}šal\text{-}lam “he will refund according to the (pertinent) royal decree”, Dar 53: 15 (yr 2, B)

\[ a\text{-}ki \text{ tup\text{-}pi\text{.MES} \ [sá ni\text{-}i\text{-}š\text{-}tu\text{-}nu\text{-}ma ni\text{-}id\text{-}da\text{š\text{-}šú\text{-}tu\text{-}tu} \] \text{ZU.LUM.MA lu\text{-}še\text{-}lu\text{-}nu} \] “according to the tablets we wrote and gave to them, they are to load up the dates”, YOS 3 29: 14–17 (letter, early Camb? U)

\[ \text{ki\text{-}i} \text{ E\text{\text{-}S.BAR} KU.BABBAR \ [i\text{-}di \text{ Gi\text{\text{-}S.MÁ i\text{-}nam\text{-}di\text{-}nu} \] “he will pay the rent for the boat according to the decision”, AnOr 8 40: 11 (Cyr yr 3, U)

\[ \text{ki\text{-}i} \text{ pi\text{-}i} \text{ LÚ\text{.mu\text{-}kin\text{-}nu\text{-}tu} \] šá PN ina ŠÁ šá\text{-}tir um\text{-}ma... “according to PN’s testimony there is written in it (i.e. in the letter)...” YOS 7 102: 21 (Camb acc, U)

PN \[ f\text{PN} \text{ ki\text{-}ma rik\text{-}sa\text{-}tu AD\text{-}šú ta\text{-}šal\text{-}lim} \] “PN will receive PN according to the contracts of her father”, Nbn 356: 39–40 (yr 9, B)

UMBIN PN na\text{-}di\text{-}in A.ŠÁ ki\text{-}ma NA₃.KIŠIB \[ šú \] “the nail\text{-}mark of PN, the seller of the field, as his seal”, Dar 26: 41–2 (yr 1, B)

c) \textit{alla} (usually spelled \textit{al-la})

i) “apart from, other than”:

\[ \text{PN \ [i\text{-}ti PN} \text{ ul a\text{-}mur...al\text{-}la} 1\text{+en} u₄\text{-}m[u]... \] “I did not see PN with PN...apart from one day...”, YOS 6 235: 13...14 (Nbn yr 12, U)

\[ \text{mim\text{-}ma \ [al\text{-}la n qaq\text{-}qar\text{\text{-}nu\text{-}nu} lib\text{-}bi ul her\text{-}ru} \] “only (literally, “nothing apart from”) n area is dug there”, YOS 3 33: 6–8 (letter, early Cyr? U)

\[ \text{(umma) \ [al\text{-}la} 1 \text{UDU ina ŠU.II\text{-}šú ul a\text{-}bu\text{-}uk} \] “I took no more than one sheep from him”, YOS 7 7: 127 (Cyr yr 1, U)

\[ \text{EN lu\text{-}ú i\text{-}de UDU.NITA.ME ina GN šá al\text{-}la šá ina EDIN ma\text{-}a\text{-}du\text{-}²} \] “Sir must know that the sheep in Uruk apart from those in the open are many”, YOS 3 87: 24–27 (letter, 533–526, U)

\[ \text{42 I understand etēqu as an infinitive here, cf. the similar a\text{-}ki\text{-}i ma\text{-}ha\text{-}ri šá GN “according to the “buying”, i.e. “market value” in Babylon”, Dar 309: 14 (yr 11, B). etēqu could also be a} \] noun of the parās form, cf. GAG §55h and Aro. “Kaufpreis”, or something similar (1961, p290).

\[ \text{43 aki atri is a legal term for an extra payment on top of a price that has already been named. This is sometimes written aki pī atri.} \]

\[ \text{44 kīma is often written GIM in this regularly used phrase.} \]
SE.BAR gab-ba...la en-de-e-tu, al-la- ’ n GUR šá a-na gi-né-e šá é-an-na na-šá-a-ta “none of the barley yield has been estimated apart from n šá which has been taken to Eanna as a regular offering”, YOS 3 8: 7...10 (letter, early Dar, U)

al-la a-ga- ’ i ki-i MUN.HL.A-ka ina UGU-ia ia-a-nu “apart from this, there is no (other) favour for which I want to indebt myself to you”, CT 22 182: 11–13 (letter, pre-527, B)

u al-la mi-ši ina lib-bi te-er-ra-ku-ma “I was beaten more than a little on account of it”, Peek 22: 26–27 (letter, middle Dar? B)

ii) alla in alla + etēqu/atāru “to exceed, be more than”, appears to have taken over the function of eli in comparative clauses in both Uruk and Babylon:

šá al-la ITI it-ti-qu ki-i EŠ.BAR KU.BABBAB i-di GIŠ.MA i-nam-di-nu “in accordance with the agreement (literally, “decision”), whoever overruns a month (of the lease on the boat) is to give silver for the rent of the boat” AnOr 8 40: 11 (Cyr yr 3, U)

GI Ме šá ina mi-iš-ha-tu al-la 5 GI Ме ši-ti-ru-nu... “in the measuring, the number of reed (-area units) which exceed the five reed (-area units of the plot) (being exchanged for them)...” VS 5 113: 1–2 (Dar yr+3, B)

For further examples and for alla + maţû “be less than”, see VI §1b, below. Earlier Akkadian uses ina + maţû. Von Soden gives the origin of alla as ana + la (AHw p36b, nB/spB). The following provides evidence of this derivation:

LU.A.KIN-ku-nu lil-li-kám-ma SE.BAR...šá ina NĪG.GA šá-ak-nu li-mu-ur ū šá a-na la gi-né-e it-tir liš-ši “your messenger may come and he may look at the barley...that is deposited in the store and whatever is in excess of the ginû offering he may take”, YOS 3 126: 34–38 (letter, 525–524, U)

d) ana

i) “for, to, as etc.”:

PN ĀB.GAL šu-a-ti...a-na ši-gi-il-tu...i-ta-bak “PN confiscated that cow” (literally, “led away for confiscation”), AnOr 8 38: 14...16 (Cyr yr 2, U)

a-na 1+en LŪ “per man” (literally, “for each man”), AnOr 8 52: 8 (Cyr yr 6, U)

ŠUK.HI.A a-na ku-su lu-hi-ir “let me hold rations back for the winter”, YOS 3 45: 24–25 (letter, Cyr-Camb, U)

PN ā PN ā a-na DUB ŠĀM gam-nu-ta a-bu-uk “take PN and PN as receipt for the full sale price”, CTMMMA 2 53 (Nbn yr 9, B)

a-na KU.BABBAB na-ad-nu a-na maš-ka-nu šak-nu a-na nu-dun-né-e a-na 1PN,..na-ad-nu “he was sold (literally, “given for silver”), he was pawned (then) he was given to 1PN as a dowry”, Nbn 1113: 10...12 (around yr 7, B)
ii) In expressions of purpose, *ana + infinitive* expresses the purpose construction “in order to + infinitive”, or “for + gerund”:

- PN *ana gu-ul-lu-bu i-na ma-har DN ta-a-bi* “PN is fit for ordaining for DN”, AnOr 8 48: 28 (Cyr yr 5, U)
  
- *pu-us-su-nu a-na la ha-la-qu na-ša-a-ka* “I have taken responsibility for their not escaping”, YOS 7 70: 17 (Cyr yr 8, U)
  
- PN...ša...a-na ha-ba-ša ša ti-ib-nu *ana* É GU₄ ME ša LUGAL a-na PN₃...na-ad-na “PN, who was given to PN₂ to chop straw for the king’s cowsheds”, YOS 7 77: 1...5 (Cyr yr 8, U)
  
- *šá-ka-nu te-e-mu a-na muh-hi tup-pi ša re-ha-nu [šá] !še₁-e-nu AB.GU₆ HI.A ū MUSEN.HI.A <šá?> ul-tu é-an-na na-ad-na-şš-šš [a]-na ša-pa-ru a-na EDIN... “in order to give advice regarding the tablet with the (record of the) rest of the sheep/goats, cattle and fowl given to him by the Eanna temple to send out into the country...”, YOS 7 198: 12–14 (Camb yr 6, U)
  
- *i-na> MU.AN.NA y ŠE.BAR z ZU.LUM.MA...a-na na-da-a-ni a-na NIG.GA é-an-na UGU-šú iš-ku-nu* “they made it obligatory for him to give y barley and z dates per year to the property of Eanna”, TCL 13 182: 17–18 (Dar yr 2, U)
  
- *ša-ta-ri ša a-dan-nu a-na e-te-ri it-ti-šú iš-šú-ru* “he made with him a record of the deadline for repaying”, Dar 486: 4–5 (yr 19, B)

**Babylon has a regular legal phrase which uses *ana + infinitive*:**

- *a-na la e-né-e 1+en-a.TA.ÁM ša-ta-ri il-qu-ú* “so that there is no alteration (i.e. comeback on a legal case), they each took a written copy”, VS 5 38: 40 (Cyr yr 6, B)

iii) “to” a place. This includes the verb *erēbu*, where *ana* precedes the “goal of movement”:

- *u₄-mu PN a-na šim-tu, it-tal-ku-ma... “when PN dies...“ (literally, “when PN goes to fate”)* CTMMA 2 54+Nbn 380: 16 (yr 9, B)

---

46 The Babylon corpus does not use *ana + infinitive* in expressions of purpose as often as Uruk does. (It is curious also that in expressions of purpose where the precative is used, Uruk once again has more examples.)

47 Further examples of the phrase *ana la e-né* are to be seen for example in: Cyr 337: 17; Camb 349: 30; Camb 375: 25 (yr 7, B) Dar 551: 17 (*a-na la e-né-nu, unexplained spelling*.)
ia-a-ltàl a-na Ē PN tu-šá-ab-hi-sa-ı̇-ın-ı̇ “you (mpl) made me go back to PN’s house”, TCL 12 122: 12-13 (Nbn yr 12? B)

ina u,-mu PN a-na a-šar-šá-nam-ma it-tal-ku “if (ever) PN goes somewhere else”, Camb 379: 12-13 (yr 7, B) cf. ki-i a-na-šar šá-nam-ma it-tal-ku “if he goes somewhere else” (ana as sandhi with ašar), VS 4 60: 11-12 (Cyr yr 3, B)

a-na GN ki-i ir-ru-bu “when he went (or possibly, “goes”) to Uruk”, YOS 3 83: 10 (letter, end Cyr? U)

a-na Ē LÜ.RIG, te-te-rulub1 “she has entered (into) the house of the širku”, i.e. “she has become a širkatu”, YOS 6 186: 6 (Nbn yr 7, U)

The use of ana as the “goal of movement” may explain the unusual:

a-na UD 6.KĀM šá e-ru-bu per-ta-a liš-si “when he comes on the sixth let him take up my post”, CT 22 200: 13-15 (letter, Nbn? B) 49

ana tarši “at the time of”:

a-na tarši RN “at the time of Nbk”, YOS 6 71: 29 (Nbn yr 6, U)

For ana as the marker of the direct object (nota accusativi) and the indirect and non-direct objects, see VI §3, below.

e) arki (usually spelled ār-ki or EGIR)

i) “after” (in a spatial sense) occurs once in the Uruk corpus:

ù ār-ki-šū ki-i ni-il-su-mu pat-ri AN.BAR a-na muh-hi-i-ni it-ta-as-sah “and when we ran after him he drew an iron dagger against us”, YOS 7 88: 18-19 (Cyr yr 2, U)

ii) “after” (in reference to time):

ār-ki PN “after PN’s death”, YOS 6 143: 1 (Nbn yr 10, U)

ār-ki mi-tu-tu šá PN “after the death of PN”, Nbn 1048: 4-5 (yr 17, B), TCL 13 160: 3 (Camb yr 3, B)

EGIR a-mir-tu, “after the inspection”, YOS 7 70: 4 (Cyr yr 8, U)

f) ašar French “chez”, “belongs to”:

fPN fPN, u fPN, la-ta-ni-ka ab-ba-kām-ma a-šar LŪ.DUMU LUGAL a-nam-dak-ka “I shall bring fPN, fPN, and fPN, your retinue, and give them to you at the crown prince’s place”, JRAS 1926: 11-13 (Nbn yr 10, B). See also line 22.

48 Preposition is usually not used. See §4, below.
49 Translation based on Ebeling’s (NBr, p109). pertu appears to refer to a hairstyle associated with a particular office, cf. ABL 43 rev 24-26. ABL 43 (NB letter) also has references to shaving while in office.
The uses of ašar both as a preposition and as a subordinating conjunction (III §2 c) in NB are in no way different from its uses in the earlier dialects as given in CAD, thereby indicating that there has been no Aramaic influence. (GlNBr p63 has only the noun “Ort”, and the conjunction “wo”, marking place.)

g) aššu “concerning, because of” is attested only once in these texts as a preposition:

\[
\text{ina } \text{MU 4.KÁM RN } \text{aššu } \text{nu-dun-nē-e-a } \text{it-ti } \text{PN } \text{mu-ti-ia } \text{a-ar-gum-ma} \quad \text{“in year 4 of Nbn I had a dispute with PN my husband because of my dowry...”}, \text{ Nbn 356: 10–12 (yr 9, B)}
\]

bal(ū) “without”. See ša la.

h) birīt “between, within”. This is a construct form of birītu “the space between”, derived from birī- (AHw p128 and GAG §115q):

\[
\text{28 GI.MEŠ ul-tu } \text{UGU } \text{pi-it-ti } \text{ša } \text{bi-rit } \text{É IM.U, } \text{LÜ } \text{ša } \text{É } \text{GAL-ū } \text{ò } \text{bi-rit } \text{É } \text{IM.SI. } \text{SA} \quad \text{“28 reeds (of property) from the unbuilt (?) land between the southern building of the big house and the northern house”, } \text{YOS 6 114: 8–9 (Nbn yr 5, U)}\]

\[
\text{LÜ.SU.HA.MEŠ } \text{ša } \text{bi-rit } \text{URU} \quad \text{“the fishermen from the land between the city (canals)”, } \text{TCL 13 163: 5–6, repeated line 11 (Camb yr 3, U)}
\]

i) eber “across”

\[
\text{20 i} \text{DUG1 [kan-du?] ša } \text{GEŠTIN.HLA } \text{ša } \text{e-ber I, “20 jars of various wines from across the river”, } \text{JNES 1993: 12-13 (letter, end Nbn? U)}
\]

j) elat (or, elāt), ana elat “in addition to”:

\[
\text{u,-mu.MEŠ e-lat a-dan-ni-šu ma-aš-sar-ti } \text{ina } \text{ka-a-ri } \text{i-nam-sar} \quad \text{“for (however many) days past its (the rent’s) deadline, he is to do a watch at the quay”, } \text{YOS 17 302: 5–6 (Nbk IV yr 1, U)}
\]

---

50 In Kuyunjik NB aššu seems to mean “because of” only (Woodington, p165). In the dialects under analysis here aššu is also a subordinating conjunction (see III §2d, below).

51 For comments on the repetition of prepositions see Note at the end of this section.

52 See AHw eber tu “opposite bank”. eber tu 2, the preposition, includes the entry on eber.

53 This second transcription, preferred by both Ebeling and von Soden, is based on their derivation of elat from *elātu(m) “extras”, a fpl noun from elā(m) (GAG §114 a, “Oberer”). Note also that in the third example here, elat has a suffix, which supports the idea of a nominal origin, as does elat’s use with another preposition in the fifth example. Whether *elātu(m) is the original form or not, in NB elat is virtually always spelled e-lat, suggesting a shortened vowel, and I use elat, following CAD. ela, which means the same as elat and is not found in NB, appears to be derived from eli (AHw, p196b).
1 ME 70 KUŠ.ME it-ti i-nam-di-nu e-lat re-ha-a-nu mah-ru-tu šá ina muh-hi-šu-nu “they will give 170 skins in addition on top of earlier remaining debts against them”, TCL 13 165: 12-13 (Camb yr 4, U)

ŠE.BAR pe-se-ti e-lat-ti-šu a-kan-na ia-a-nu “there is no white barley here apart from that”, YOS 3 113: 11-12 (letter, early Cyr, U)

e-lat ú-il-ti.ŠE.BAR pe-se-ti e-lat-ti-šu a-kan-na ia-a-nu “there is no white barley here apart from that”, YOS 3 113: 11-12 (letter, early Cyr, U)

SE.BARpe-se-ti e-lat-ti-su a-kan-na ia-a-nu "there is no white barley here apart from that", YOS 3 113: 11-12 (letter, early Cyr, U)

e-lat u-il-ti.MES mah-re-e-tu sa KU.BABBAR SE.BAR ZÜ.LUM.MA u SUM. SAR “this is on top of (or, superseded?) earlier IOU’s of silver, barley, dates and garlic”, Nbn 344: 9 (yr 9, B), cf. AnOr 8 68: 13 (Camb yr 3, B) and elsewhere.

a-na e-lat-šu “In addition to that”, Dar 296: 5 (yr 11, B)

k) eli “on the subject of, over, against” (usually spelled e-ži or UGU):54

eli sa DUB PN u iPN DAM-šu ú e-ži LU-tu E maš-ka-ni-šu PNi [...]|PN, ia-a-ri-<<tu>>-tu ša PN iq-hu-ú um-ma “regarding what was on (literally, "that of")

the tablet of PN and iPN his wife, and regarding his pledged household servants, PNi [...|] and PN, the heir55 of PN, spoke as follows”, Nbn 668: 4...6 (yr 12, B)

á-il-ti ša PN...šá ŠE.BAR šá FDN šá e-li PN, “the IOU of PN... for barley from the Lady-of-Uruk, owing from (literally, “against”) PN”, BIN 2 130: 14, (Camb acc, U) cf. á-il-ti ša KU.BABBAR a, 6 MA.NA a-dí hu-bal-lu, šá PN šá e-li PN, “the IOU of PN for the (aforementioned) six minas of silver plus interest, owing from PN,”, ibid.: 20-21.56

PN a-na UGU É ú mim-ma šá kan-ku-ma pa-ni-ia šu-ud-gu-lu u e-li PNi...pa-qa-ri ú-sáb-ši “PN has made a claim regarding the house and everything signed and transferred to me, and (also) regarding PNi (our slave)”, Nbn 356: 24...27 (yr 9, B)

UGU 1 GUR 5 GUR ZÜ.LUM.MA sis-si-na-šá i-n-áš-ši “per kur (of land) he may take five kur of dates as his bonus”, Dar 35: 10-11 (yr 2, B)

eli forms the following idiomatic constructions:

i) eli PN + parasu “to charge (as penalty) against PN”:

(accusations) e-li PN ip-nu-su “they made charges (accusations) against PN”, YOS 7 7: 42, 50, 59, 76 (Cyr yr 1, U)

U1 a, 1+et 1+en 30 PN PN2,....e-li- nut-šu ip-nu-su “for that one sheep, they made a thirty-fold (replacement) charge against PN and PNi,” (reading e-li-šu-nu), TCL 13 147: 8...13 (Camb yr 1, U)

---

54 Although UGU is used for both eli and muhhi. eli is never preceded by a preposition whereas muhhi usually is. The use of eli is restricted to more figurative instances whereas muhhi has a more physical sense. For this reason I have interpreted the UGU in Dar 35 as eli.

55 Cf. the related document TCL 122: 15 PNi, ia-a-ri-šu ša PN (referring to Nbn yr 8, when PN was still alive).

56 Note how muhhi functions in exactly the same way in YOS 6 161: 3...4: ú-il-ti ša PN...šá muh- hi PNi (Nbn yr 8, U).
Note the resumptive *eli* and suffix in:

...*e-li PN₁,...*e-li-*šā-nu* *ip-ru-su* “they made charges against PN₁,... Iraq 13: 23...
26 (Camb yr 2, U)

ii) PN *eli ram(a)nišu + kunnu “PN confesses” (i.e. “gives evidence against himself”). Note in the second example *eli* is written UGU and could therefore be construed as *muhhi*:

PN *iš-šā-al-ú-ma* *iq-bi* *e-li* *ram-ni-*šā* *ú-kin* *um-ma* “PN was questioned and he spoke, confessing...” AnOr 8 47: 18–19 (Cyr yr 5, U)

(šā) PN...UGU ram-*ni-*šā *u-kin-*nu “(about what) PN...confessed”, TCL 13 142: 2...3 (Cyr yr 7, U)

PN *u PN₂* *e-li* *ram-ni-*šā-*nu* *u-kin-*nu-*ša* “PN and PN₂ confessed as follows...and PN₂ confessed as follows”, Dar 296: 7...10 (yr 11, B)

iii) PN *eli PN₂ + rašū “PN has a claim against PN₂” (i.e. PN₂ is in debt to PN to the sum of, cf. *rašatu*): 58

2| MA.NA KÜ.BABBAR *e-li* [PN]...ir-*še-e-ma* *ú-ša-ti [xx... PN DAM-*šā* i-ša-la-*ša* “he had a claim (i.e. a *rašatu*) of 2| minas of silver against PN and he made out an IOU [xx...] with PN his (i.e. PN’s) wife”, TCL 12 122: 4...6 (Nbn, yr 12? B) cf. PN speaking later on:

2| MA.NA e-li-*ia* tu-*ša-*ar-*ša-*a-*šu-*ma (literally) “you (pl) are making him have a (rašatu) claim of 2| minas against me”, i.e. “you are making me owe 2| minas to him”, ibid.: 11–12

PN *e-li É GN*...*e-li PN₂* *šā* *ši-i* *u* *mu-ta-*ša* *a-na* *kas-pi* *i-*ša-*mu* *e-li* *mim-*ma *šā* PN₃ *la* ú-*ša-*šu-*ša* “they made PN have no claim to the house in Borsippa or to PN₃ (a slave) whom she and her (deceased) husband had bought for silver, nor to anything of PN₃ (the deceased husband)”, Nbn 356: 31...34 (yr 9, B)

PN *u PN* AMÁ-*ša* *a-na* UGU ra-*šu-tá* *ma*-*la* ba-*šu-*ša *UGU* PN₃ *it-ti* PN₃-*ul* *i-*dab-*bu-bu-*ša “regarding any credit that may be owed by (i.e. reading *eli* “against”) PN₃ (the deceased), PN and PN₂, his mother, are not to raise an objection with PN₃-*ul* (PN₃’s sons)”, Camb 110: 8–11 (yr 2, B)

1) *eliš* and *šapliš “above and below*:

ŠE.NUMUN à me-*re-*ša *ša* *e-liš* à *šap-liš* ša *I*, eš-*ša* GAB KÁ.GAL DN “crop and arable land which is upstream and downstream from the New Canal, opposite the Enlil Gate”, Dar 80: 1–2 (yr 3, B)

---

57 This appears to be a confusion of a 3ms passive to which a 3mpl impersonal subject ending has been added. CAD gives no citations of *šatu* N in NB. See impersonal subject, VI §2c.

58 *rašatu* also works with *eli*: (1| MA.NA KÜ.BABBAR) *ina* ra-*šu-tu* ša PN...ša e-li-*ša* a-na PN*i-*nam-din “he is to give 1| minas silver from the debt against him to PN”, Dar 446: 3...5 (yr 17, B).
m) ina: (usually spelled i-na, occasionally AŚ)

i) “on, in”:

*ina ku-ru-up-pi ša PN a-ši-ib “he was sitting on PN’s basket/chest”, cf. *ina muh-hi ku-ru-up-pi ša PN at-ta-šab “I sat (down) on top of PN’s basket”, YOS 7 78: 5–6, 12–13 (Cyr yr 7, U)*

10 GUR ŠE.BAR *i-na ŠE.BAR-ia šá ina IGl-ka a-na PN i-di-in “give PN ten kur from (literally “in”) the barley of mine that you have (at your disposal)”, Dar 385: 5–7 (yr 14, B)*

ii) “by, in (the name/order of)”:

*ina DN,......it-te-mu-ū “he swore by the gods,”, AnOr 8 30: 13 (Nbn yr 13, U). Also in YOS 6 232: 16

*i-na qf-ba-a-ta PN “by the order of PN”, YOS 7 70: 5 (Cyr yr 8, U)*

iii) as the marker of instrument:

*LÚ.DI.KU₅₃,MEŠ tup-pi išt-tu-ru-ma ina NA₅₃,MEŠ-šá-nu ib-ru-mu-ma a-na PN id-din-nu “the judges wrote a tablet, signed it with their seals and gave it to PN”, Nbn 668: 19–21 (yr 12, B)*

ŠE.NUMUN gab-bi ina mar-ri AN.BAR i-he-ri ŠE.NUMUN ina GIŠ [APIN?] ul ip-pu-uš “he is to dig the whole field with an iron shovel; he is not to work the field with a [plough?]”, VS 5 49: 17–18 (Camb yr 4, B)

*u₅₃,mu šá us-su-nu ina ši-pir-tu, EN.MEŠ liš-pur-ū-NU “the day they come out, may Sirs contact me by means of a message”, YOS 3 21: 16–17 (letter, Cyr–Camb, U)*

iv) as a result of:

*1kal₃-bi šá tam-mah-ba-aš ina mi-ih-si-šá mi-i-ti “the dog she hit (=historic present in reported speech) is dead from its beating”, YOS 7: 107: 12–13 (Camb yr 1, U)*

v) “at, during” in expressions of time (Babylon texts only), ina + infinitive:

*i-na a-šá-ba šá PN “at the sitting (i.e. presence) of PN”, Camb 349: 38 (yr 6, B)*

i-na šá-ta-ri šá tup-pi MU.MEŠ “at the writing of that tablet”, Camb 349: 32 (yr 6, B) cf. RA 67: 42 (B)

---

59 “they” refers to some aforementioned people, not to the “Sirs”.
60 For further expressions of time using ina, see §4, below.
61 A standard legal expression, used to refer to a female witness being present in court.
n) ittahu “by the side of” is derived by von Soden from ina and tahê. See AHw tahê “Seite”? p1303a.

śa it-ta-hu-ū-ā *iz-zi-zu “(someone) who can stand by my side (i.e. to help me)”, CT 22 73: 5 (letter, Dar? B):

um-ma it-ta-hu PN iz-zi-za-ma “saying, ‘stand by PN!’” ibid.: 12

o) itti “(together) with” (usually spelled it-ti, sometimes KI or it-ti-i):

PN it-ti-ku-nu id-dab-bu-ub “PN is to discuss with you”, YOS 6 78: 15 (Nbn yr 4, U) cf. also Nbn 65: 12 and CT 22 74: 4

it-ti LÚ.RIG.MEŠ śa FDN šât-ru “they are recorded along with the širkus of the Lady-of-Unuk”, YOS 6 116 13–14 (Nbn yr 10, U)

3 LÚ.ERIN.MEŠ it-ti-i-ni PAP 6 “there are three workmen with us, (making) a total of six”, YOS 7 156: 5–6 (Camb yr 3, U)

it-ti a-ha-meš nim-hur “we bought between63 us”, Nbn 356: 10 (yr 9, B)

n ZÚ.LUM.MA PN u PN, KI PN,...u-šâ-az-za-ru ma a-na PN, ina-ad-din-nu-.” “PN and PN, are to register n dates with PN,...and give them to PN,”, Dar 384: 2...4 (yr 14, B)

itti + ṭepū “to be built onto/into”:

hu-us-su śa it-ti Ëè ka-a-ri ṭe-pu-ū “a reed hut that is built onto the quay house”, Nbn 499: 18–19 (yr 11, B) cf.: Ëè śa PN,...a-di ṭi-pa-nu śa it-ti-i PN, “(regarding) PN’s house including an annexe which is connected to PN,’s (house)”, Dar 499: 1...3 (yr 20, B)

itti + mātu in it-ti-šū lu-mu-tu “I want to kill it (i.e. the dog)”, YOS 7 107: 11–12 (Camb yr 1, U), is a hapax legomenon which may also be an idiom.64

p) itû “adjacent to”, of which most attestations are in the Babylon property texts (often referring to real estate which has been given as a pledge), is always written ÚS.SA.DU.65 The reading itû is assumed from lexical lists such as ana ittišu.66

ŠE.NUMUN-šū ina pa-ni GN śa ÚS.SA.DU PN,...È maš-ka-ni-šū mah-ru-ū śa MN maš-ka-nu śa PN, “his land in front of the Giššu Gate, which is adjacent to PN,’s

---

62 However, in AHw none of the tahû references is “spB”. “spB” references are confined to ittahû.

63 For itti aḥameš “mutually, with each other/one another” see aḥameš in §3b i, below.

64 Although the literal translation may be “let me die with it”, this makes no sense in the context.

65 When DA is used instead of ÚS.SA.DU, the reading tāhu (meaning virtually the same, q.v. ee, below) is assumed. DA is also used to describe pledged real estate, as in Dar 378: 2 and VS 4 152: 4, 5).

property), his earlier pledge from Simânû is pledged to PN₂”, Nbn 605: 5–8 (yr 12, B) Further examples are in Camb 349: 20; TCL 13 190: 3, 5, 8; TCL 13 193: 11, 12 (both B), and in YOS 6 33: 6 (U).

kī, kīma see akī

q) kīḍān “outside”:

1 PI ŠE.NUMUN-šā-nu zaq-pi šā ki-da-nu KÂ.GAL DN “one śūrâ of their planted arable land which is outside the Zababa Gate”, Dar 379: 66 (yr 14, B)

r) kūm. In these texts kūm , probably pronounced [kuː] functions as a preposition only, “in compensation for, in exchange for, (acting) as”: 67

1 MA.NA PN...ku-um da-a-ka šā GÎŠ.GÎŠIMMAR a-na PN₁ i-nam-din “PN is to give one mina of silver in compensation for the killing off of the date-palm to PN₂”, TCL 12 89: 10–11 (Nbn yr 8, U) cf. YOS 7 68: 11–13

KI UZ.TUR.MÛSEN 1+en a-di 30 ku-um UZ.TUR.MÛSEN.ME a₂ e-li PN₁ e-li-šā-nu ip-ru-su “with each duck, they decided on a charge of a thirty-fold compensation, (applicable to) those two (stolen) ducks, against PN₁”, Iraq 13: 22–25 (Camb yr 2, U)

PN EN li-bu-uk-ma ku-um na-aš-part-tu,69 šā EN-fa lil-li-ik “may Sir take PN so that he can act as agent for my lord”, CT 22 110: 20–23 (letter, pre-527, B)

2-ū-tu ú-qa-ti-ma ku-u KŪ.BABBAR a₃ MA.NA PN ib-bak-ka “it (i.e. the bull calf) is to reach two years of age 70 and PN is to take (it) in exchange for the mina of silver”, Dar 257: 7–8 (yr 9, B)

kūm is used in the šûpêltu contracts in Babylon, which involve the exchange of property or assets. Note that all the texts are from the reign of Darius and are worded in the following manner:

PN...PN₂...šu-pel-tu, ku-um PN₁ a-na PN₃...i-dî-in “PN gave PN₁ to PN₃ in exchange for PN₂”71 cf. Dar 309: 7,12 (yr 11); Dar 319: 8 (yr 12); TCL 13 193: 23 (yr 16)

s) kutalla in ina kulat(la) “behind (referring to position)”:

ina ku-tal-li-ka il-la-ku “he goes behind you” (broken context), YOS 3 17: 25 (letter, 533–526, U)

67 See the references to kūm as a subordinating conjunction in AHw 505b, 2.
68 See discussion in adi iii, footnote.
69 The text reads: na-aš-āš-part-tu,?l.
70 CAD has a variant interpretation of this, which is discussed in šnû in V §2c, below (numbers).
71 I.e. the construction is PN x šûpêltu kûm y ana PN₁ + nadânu.
ni-i-ni à PN...ina ku-tal  BĀḌ I, ni-he-er-ru “we and PN... were digging a canal behind the city wall”, Iraq 13: 10–11 (Camb yr 2, U)

i-na ku-tal-la É PN “behind PN’s house”, Dar 379: 11 (yr 14, B)

ina ku-tal-li-ia...gab-bi uk-ti-ill “he detained (them) all behind my back”, CT 22 74: 8...10 (letter, middle Dar, B)

lapānī see pānu

t) libbu in ina libbi, “in; among”:

    ti-iq-tu, ina lib-bi-kū-nu la i-šak-kan-’ “do not make (polite 3pl., going with EN.MEŠ) trouble amongst yourselves”, YOS 3 21: 18–19 (letter, Cyr–Camb, U)

    ZULUM.MA...ina muh-bi 1+et-ti ina lib-bi GIS.MA i-nam-din “he is to give the dates in one go by boat”, Nbn 344: 4...6 (yr 9, B)

u) libbū⁷² “on the basis of, because of”, may take suffixes:

    ul i-deki-i lib-bu-ú a-ga-a ta-ku-uš-šá-’ ina lib-bi kī-ī LŪ.A.KIN-ia la?!ta-l-am-ma-’ra’ “I did not know you were delayed because of this. That is why I did not see my messenger”, YOS 3 22: 24–27 (letter, early Nbn, U)

    u ši-ba-šá...lib-bu-ú šá šad-da-gad EN liš-šá-’ “and may Sir take the grain tax on the basis of that of⁷³ last year ”, CT 22 78: 19...21 (letter, 545–527, B)

    lib-bu-ú-šā gi-mir EN li-pu-uš “may Sir act on the basis of it all”, YOS 3 45: 18–19 (letter, Cyr-Camb, U)

v) Compounds involving mahar

i) (ina) mahar “facing, opposite, in the presence of”. Of the texts examined here, these are limited mainly to legal documents:

    (property) ma-har šá DAEpAL-u “facing the side of⁷⁴ the big house”, Dar 379: 29 (yr 14, B) cf.: i-na ma-har E GAL-ú la-bi-ri “opposite the big old house”, ibid: 34

    ma-har E GAL-ú la-bi-ri “opposite the big old house”, ibid: 34

    i-na ma-har LŪ.SUKAL LŪ.GAL.MEŠ à LŪ.DI.KU.MEŠ...di-i-ni id-bu-bu-ma dib-bi-šú-nu iš-mu-u “they pleaded their case before the chief official, the dignitaries and the judges and their case was heard”, Nbn 1113: 6–8 (after yr 7, B), cf. Nbn 668: 22.

---

⁷² Both libbi and libbū form compound phrases which function as subordinating conjunctions and adverbs (q.v.).

⁷³ Understanding šá as a periphrastic genitive being used instead of the adverbial šaddagad on its own.

⁷⁴ The ma-har šá appears to be a confusion of the construct and the periphrastic genitive. The construct alone is used in line 34. Contrast this with the nominal relative clauses such as: Eššá DA É (x) à DA É (y) “the house...which is next to house (x) and next to house (y)”, seen for example in lines 5–7 and 28 (given in the “Note” on repetition of prepositions, at the end of this section).
ii) *ana mahar* denotes movement into the presence of:

PN...a-na gu-ul-lu-bu ina ma-har DN a-na mah-ri-i-ni i-bu-kám-ma “he brought PN... into our presence for (ritual) shaving before Kanisurra”, AnOr 8 48: 20-21 (Cyr yr 5, U). Contrast this with line 27: *i-na ma-har* DN...ina ma-har DN where position and not movement are indicated.

*a-na mah-ri-i-ni i-bu-kam-ma* “I have brought him before you. Come to a decision about us’. The judges listened to their argument. The documents and contracts that PN brought, were read out (i.e. impersonal subject) before them...”, Nbn 356: 28-30 (yr 9, B)

w) *mala* “as much as; (quantitatively) appropriate to; according to; any”, and the idiom *mala...masu* “to be able...(to do...)”. *mala* is understood by von Soden as the construct of the infinitive *ma-la*:

*ma-la* is understood by von Soden as the construct of the infinitive *ma-la*:

The following is difficult. The meaning is “any” rather than “appropriate to”:

*dul-lu SIG,HLA GI u GIS.ÚR ma-la lib-bi ip-pu-uš a-na muh-hi PN i-ma-an-nu* “any jobs (requiring) bricks, canes or beams there he is to do and put on the account of PN”, VS 5 82: 11-13 (Dar yr 16, B). However, this can also be translated “any jobs...that he may do there he is to put on the account of PN”,

75 For *mala* in relative clauses, where it often means “any” and where there is a possible exception to the standard spelling *ma-la*, q.v. III §1b, below.

76 See AHw p591b and 597a.

77 Or “goes?” The writer’s polite insistence in addressing the recipient in the third person throughout makes this letter difficult to understand.
i.e. taking *ma-la* *lib-bi* *ip-pu-uš* as a verbal clause with an unmarked subjunctive.

*ana mala* “appropriate to, in accordance with”:

```
pu-ut bi-it-qu u ki-rik-tú šá I, LUGAL a-na ma-la šE.NUMUN šá FDN šá ina pa-ni-sú PN na-sí “PN has the responsibility of the upkeep and damming of the King’s River appropriate to the Lady-of-Uruk’s arable land that he has in his charge”, TCL 12 90: 19–20 (Nbn yr 7, U)
```

```
PN...a-na ma-la HA.LA šá PN₁ ú PN₁, ina ŠU.II PN₂ u PN₂...e-ti-ir “PN... received (it) in proportions appropriate to the share of PN₁ and PN₂...from PN₁ and PN₂”, Joannès Strasbourg 3: 7...11 (Dar yr 6, B)
```

x) *mihrat* “opposite” is virtually always written GAB. According to AHw GAB is probably read *mehret*, but the first example below has *mihrat*. The relevant CAD entries are s.v. *mihirtu* (M/II 52b–53, sections 4.3’ and 4.4’):

```
šE.NUMUN A.SÁ tap-tu-u...mi-ib-ra-at KÁ.GAL DN pi-ha-at GN “(regarding) arable land, a newly opened field opposite the Ninurta Gate in the Babylon district”, Nbn 293: 1–2 (yr 8, B)
```

```
šE.NUMUN šá GAB KÁ.GAL DN “arable land which is opposite the Zababa gate”, Cyr 337: 1 (yr 9, B)
```

y) Compounds involving *muḫḫu* “top of the head, front”. *muḫḫu* is often written UGU:

i) *a-di muḫḫi* “up to”:

```
a-di muḫḫi | MA.NA KÙ.BABBAR EN lid-da-šú “may Sir give him up to one third of a mina of silver”, CT 22 148: 9–10 (letter, 545–527, B)
```

There are two examples of *a-di muḫḫi enna*, “until now”, both from Uruk. Since the reference is to past events leading up to the present, the verb is preterite:

```
mi-na-‘ a-di UGU en-na te-en-ku-nu ul āš-me “why haven’t I heard from you yet?”, YOS 3 64: 10–11 (letter, 538–534, U)
```

```
a-di UGU en-na re-eš SE.BAR-i-ni ul ni-šš-sí “up to now we haven’t made a check79 on our barley”, YOS 3 87: 9–10 (letter, 533–526, U)
```

78 See the discussion in *eli* regarding the criteria for reading UGU as either *muḫḫu* or *eli*.
79 *reša...našū*. See CAD *našū* A6 p107 (*rešu a*).
ii) *ana muhhi*:

1) "regarding", especially in letters:

>a-na muh-hi MUNUS la-ta-nu šá EN iš-pu-ru “regarding the woman attendant Sir sent”, YOS 3 22: 15–17 (letter, early Nbn, U) cf. YOS 3 83: 6–7 (U) and elsewhere.

>a-na UGU ZÜLUM.MA...šá taq-ba-’ mam-ma ul id-din-nu “regarding the dates... you talked about, no one gave (them)”, CT 22 73: 28...31, 25–27 (letter, early Dar? B)

SUM.SAR a-ga-a a-na muh-hi mi-ni-i ki-i la aš-*bu “this garlic, why is/that it is not included” CT 22 81: 20–22 (letter, Nbn, B)

2) “against” (either physically or figuratively):

PN...GİR AN.BAR ul-tu MURUB,šá a-na muh-hi PN...is-su-hu “PN drew an iron sword/dagger from his waist against PN”, TCL 12 117: 2...5 (Nbn yr 16, U)

>pat-ri AN.BAR a-na muh-hi-i-ni it-ta-as-sah “he drew an iron dagger against us”, YOS 7 88: 19 (Cyr yr 2, U)

>i-mit-tu ul-tu é-an-na a-na muh-hi-fa en-de-et “the estimate from Eanna is set under my responsibility”, YOS 3 12: 16–18 (letter, early Nbn, U) dul-lu...ma-la ina lib-bi ip-pu-šu a-na UGU PN i-man-ni “any jobs that he does there he is to put on to PN’s account”, Cyr 177: 10...12 (yr 4, B) cf. a-na muh-hi PN i-man-nu VS 5 82: 12–13 (Dar yr 16, B)

> (ana muh-hi KÜ.BABBAR a, šá taq-qa-ba-’) GİŞ.DA ki-i a-mu-ru šá MA.NA 3 GIN KÜ.BABBAR šá ana IGI PN...ina GİŞ.DA ana muh-hi-ka šá-ti-ir “(regarding that silver about which you’re talking,) the ledger, when I saw it, had half a mina (and) 3 shekels of silver down on it at PN’s disposal, written out against you”, CT 22 189: 8–15 (letter, MNA, B)

3) Unusual usage, perhaps a personal idiosyncrasy for expected *ina muhhi* “in charge of”:

LÜ.e-mi-de-e u LÜ.SITA,,MEŠ šá a-na muh-hi ma-sá-hu šá ŠE.NUMUN “the inspectors and accountants who are in charge of measuring the arable land”, AnOr 8 30: (Nbn yr 13, U)

---

80 Note also the adverbial *ana muhhi* in a-na UGU ši-pir-tu, ša mar šip-ri EN lid-din “therefore, may Sir provide either a message or a messenger", ibid.: 25–27.

81 See I §6 b i, above, for the reading aš-*bu.

82 Preceded by the entry in iii 1, below. *ana muhhi* maš̄ahi is also used in YOS 6 232: 8. Both documents are written by Murānu <Nabû-mukīn-ahi (Ekur-zakir).
4) Unusual usage, perhaps a personal idiosyncrasy for expected adi: 83

*a-na muh-hi u-mu a, GIS.MÁ ul ú-šē-ri-iq* 84 “up to today the boat has not been emptied”, YOS 3 66: 3–4 (letter, Camb, pre-526, U)

iii) *ina muhhi*

1) “in charge of, at, against”, can often be interchanged with ana muhhi:

(people) *ša ina muh-hi ma-šā-šu ša ŠE.NUMUN “*(people) in charge* 85 of measuring the arable land”, AnOr 8 30: 6 (Nbn yr 13, U)

*Irá 1 ma-nē-e 1 GÍN KÜ.BABBAR ina muh-hi-šā-šu i-rab-bi “per month, per one mina, one shekel of silver will accrue against them”, Nbn 314: 19 (B). A standard phrase, cf. MU.AN.NA ina muhhi ma-nē-e 12 GÍN KÜ.BABBAR ina muh-hi-šā-ši-rab-bi “per year, per one mina 12 shekels of silver will accrue against him”, VS 4 62: 4–6 (Cyr yr 6, B)* 86

PN...*kak-kab-ti ú ár-ra-a-ti ina UGU UZU rit-ti-šā it-ta-di “PN put a star and markings on the skin (literally, “flesh”) of her hand”, YOS 6 79: 14...15 (Nbn yr 5, U)

*ZÚ.LUM.MA ina GN ina MN ina UGU I, GN, ina muh-hi 1+et rit-ti...i-nam-din “he will deliver the dates in one go in Sahrīnu at the Borsippa canal...in Arasamna”, Nbn 344: 4...6 (yr 9, B) cf.*

*ina UGU 1+et rit-ti “in one go”, Joannes TEBR 39: 9 (Camb yr 2, U)*

*PN LU.EN pi-qi-tū ina muh-hi ŠE.BAR ip-te-qid “PN the bel piqitti is in charge of the barley”, YOS 3 12: 13–15 (letter, early Nbn, U)*

2) “regarding, concerning, because of”, is almost exclusively restricted to the Babylon texts:

*na-da-nu u ma-ha-ri ina UGU ka-sap nu-du-nē-e-a ni-pu-uš-ma... “we engaged in a business undertaking involving my dowry silver...”, Nbn 356: 5–6 (yr 9, B)*

*te-er-si-tu, ga-mir-tu, ina muh-hi dal-lu ina É NÍ.G.A i-nam-di-nu-niš-ši “they are to give him all the prepared material concerning the work, from out of the storehouse”, VS 6 84: 6–8 (Nbn yr 12, B)*

*ina UGU 1 GUR 5 GUR siš-sin-nu u tap-tu-tūl ina UGU 1 GUR ŠE.NUMUN 6 GUR siš-sin-nu i-na-āš-ši “for each kur (of worked land) he may draw five kur as bonus and for newly opened land (he may draw) six kur per one kur of arable land as bonus”, VS 5 49: 20–21 (Camb yr 4, B)*

83 The writer has an unusual use of ana muhhi ša for adi muhhi ša as a subordinating conjunction elsewhere in this letter. See *muhhu* in III §2, below.

84 For *ušriq*. For the use of the 3ms for a circumlocution of the passive, see VI §2, below.

85 This continues with the entry in 3, above.

86 The latest example of this phrase in these texts is in Dar 494: 5–6 (yr 19, B).
ina UGU KA-i mar-su nu-bat-tu, la ta-ba-a-ta “because of unpleasant talk, do not stay the night”, YOS 3 19: 23–24 (letter, early Cyr, U)

iv) ultu muhhi “from”:

ma-as-šar-tu, ul-tu UGU I, tak-ki-ri a-di UGU I, har-ri kip-pf ni-is-sur “we kept guard from the Takkiru canal to the Harri Kippi canal”, YOS 7 156: 7–8 (Camb yr 3, U) cf. Nbn 760: 7–8 (yr 14, B), also with repetition of UGU.

v) Occasionally muhhi is used without a preceding preposition, with no change in meaning from ina muhhi (first three examples). In the first example UGU could conceivably be eli, “against”, but as muhhi has a more physical sense than eli,\(^{87}\) muhhi is preferred:

\(^{1}\)PN...ù DUMU-šá šá UGU ti-lu-ù “(PN...and her nursing son”, (literally, “on the breast”) repeated in line 9, Nbn 832 (yr 15, B)

ú-il-ti šá PN...šá muh-hi PN\(_2\) “an IOU owing from PN\(_2\) to PN”, YOS 6 161: 1...4 (Nbn yr 8, U)

kak-kab-tUŠU šá muh-hi ri-it-ti-šá i-mu-ru “they saw the star on her hand”, YOS 7 66: 12 (Cyr yr 7, U)

z) ina pânăt “before” (in a chronological sense) is found in the Uruk texts:\(^{88}\)

(land) ina lib-bi 40 qa₂-qar ina pa-na-at-tu-ú-a i-her-ru-ú “(land) out of which they have (already) been digging 40 units before me (i.e. before I arrived), YOS 3 19: 4–6 (letter, early Cyr, U)

(people) šá ina pa-na-tu-ú-a paq-du “people who were employed before me”, TCL 13 170: 9 (Camb yr 5, U)

aa) pân(r) “face” occasionally appears on its own in construct but is usually accompanied by ina, ana or even la as a compound preposition. It is occasionally written IGI, but although this may be read mahar, pân is more figurative in use and seems to be written syllabically if there is any doubt:

i) in construct, pân “before”:

GIŠ.ŠUB.BA-šú...pa-àn DN pa-ni-šá ú-šá-ad-gi-il “he transferred\(^{89}\) his...prebend before Kanisurra to him (his adopted cousin)”, AnOr 8 48: 19, 25 (Cyr yr 5, U), cf. šá pa-ni sa-lam DN “(prebend) before the statue of Bel”, in similar but broken context, Joannès Strasbourg 3: 4 (Dar yr 6, B)

\(^{87}\) See the discussion in eli.

\(^{88}\) AHw pânăt “Vorderseite”, p818.

\(^{89}\) See iv, below for pân(i) + dagātu. This text uses muhhi DN elsewhere. See above.
ii) *ana pānī* "into the presence of" (denoting action towards):

\[
an-a\ pa-ni-ia\ it-tal-ku-nu...a-mur\ a-na\ pa-ni-ka\ al-tap-ra-âš\ šu-nu-tu\ "they have come to me...See, I have sent them to you",\ YOS 3 87: 7...12 (letter, 533–526, U)
\]

iii) *ina pānī*

1) "at the time of; before" (without action towards):

\[
ina\ pa-ni\ RN\ "at the time of Cyrus",\ YOS 3 45: 15 cf. YOS 3 81: 27–28 and YOS 3 106: 34 (all letters, from the same person, Cyr–Camb, U)
\]

\[
E.MEŠ\ ina\ pa-ni-šu-nu\ im-qu-ta-ma\ "the houses fell down in their time..." (or "before them"),\ AnOr 8 70: 10 (Camb yr 3, U)
\]

ii) "to have (at one’s disposal), be in charge of" cf. Arabic *‘inda* + suffix:

\[
ŠUK.HLA\ ina\ IGI-šu-nu\ ia-a-nu\ "they have no provisions",\ YOS 3 33: 10–11 (Cyr yr 2–3, U)
\]

\[
a-di\ 4\ MU.AN.NA.MEŠ\ A.SÂ\ ina\ IGI\ PN\ "for up to four years the field is at the disposal of PN",\ YOS 7 162: 10–11 (Camb yr 3, U)
\]

\[
a-di\ 2\ MU.AN.NA.MEŠ\ É\ ina\ IGI-šû\ "for up to two years the house is at her disposal",\ VS 4 66: 8 (Cyr yr 8, B) cf. line 12
\]

iv) *pañ(T) + dagālu*, literally "to look at the face", means "to belong to" in the NB of this period. The causative is also used, meaning "to transfer to the possession of":

\[
mim-ma\ šá...pa-ni-ia\ šu-ud-gu-lu\ "everything which was transferred to me",\ (passive stative) Nbn 356: 24...25 (Nbn yr 9, B)
\]

\[
pa-ni-šu-ud-gil-ma\ "transfer (impv) to him",\ also\ pa-ni-šu\ id-da-gal\ "(it) will belong to him",\ CTMMA 2. 54+Nbn 380: 10, 23 (Nbn yr 9, B)
\]

\[
GIŠ.SUB...pa-ni\ PN\ id-dag-gal\ "the prebend... will belong to PN",\ VS 5 74/75: 21...22 (Dar yr 11, B)
\]

\[
[LÙ?]\ a-me-lut-tu,\ pa-ni\ FDN\ ta-ad-dag-gal\ "the woman servant will belong to the Lady-of-Uruk",\ YOS 7 66: 21 (Cyr yr 7, U)
\]

\[
GIŠ.SUB.BA-šû\ pa-ni\ DN\ pa-ni-šá\ ú-šá-ad-gi-li\ "he transferred his prebend before Kanisurra to him",\ AnOr 8 48: 25 (Cyr yr 5, U)
\]
v) lapānī

1) “away from”:

\[ \text{CT 22 194: 18–19 (letter, end Nbn, B)} \]

\[ \text{CT 22 6: 18–20, 26–27 (letter, Cyr? B)} \]

\[ \text{YOS 3 200: 15 (letter, early Camb? U)} \]

2) “against”

\[ \text{YOS 7 156: 7...10 (Camb yr 3, U)} \]

3) Japani PN + alādu is an idiom meaning, “to have/bear (a child) by PN”:

\[ \text{PN...šā la-pa-ni PN}_2...mu-ti-šā mah-ru-ū tu-li-du “PN, whom she had by PN, her first husband”, Nbn 380: 4...7 (yr 9, B)} \]

\[ \text{AnOr 8 47: 15–16 (Cyr yr 5, U)} \]

\[ \text{Roth: 21–22 (Cyr yr 9, U). See also lines 15–16, 37–38.} \]

That some of the prepositions are clearly nouns in origin is obvious in the case of pān(i), where the line between a prepositional meaning and that of a noun in construct is very fine. This is supported by the fact that it is used as a compound with ana/ina and in construct form only. When used on its own in the idiom pān (in

---

90 lapānī occurs in NA, SB (after Tiglath-Pileser III, see AHw p534b) and NB only. Although it is commonly assumed that the la of lapānī is the Aramaic preposition l, Hartman, OrNS 8 (1933) p373, states that there is no clear evidence that la is the West Semitic preposition and that lapānī is the only instance in which Akkadian la does not have its clear negative force. Lapānī has a “motion away” idea (“not in the face of?”), unlike the WSem l (or its Akkadian equivalent ana). *l* is usually prefixed to the indirect object in Aramaic. Although lapān occurs before the indirect object in NB as seen in the given examples, no satisfactory explanation has yet been made as to the nature of the la- prefix. The same problem occurs with laqāt “away from”, in NA and NB (ABL) and CT 22 202: 20; see AHw p520a, la = Aram LW (“not in the hand of?”).

91 The damaged sign may be too short to be BAL.

92 (Where PN is the father.) Contrast with the simple 1+et DUMU.MUNUS ū-lid-su “I bore him a daughter” Nbn 356: 4 (yr 9, B). The idiom does not appear to be an Aramaism, since Aramaic uses either the causative or a circumlocution.
SB, pāna) dagālu, it clearly functions as a noun in the object case. This observation lends support to the belief that the la- in lapān is of prepositional origin.

bb) qerbu “in” is used in documents involving buildings. These examples are both from Babylon:

É e-ēp-šu KI-ti GĪŠ.SAR-tu šā qē-er-ba GN “a house plot in the Kiratu quarter in Borsippa”, Nbn 85: 1–2 (yr 2, B)

tup-pi šu-pel-ti É.MEŠ šā KI-tim šu-an-na šā qē-reb GN “a tablet (recording) the exchange of houses in the Suanna quarter in Babylon”, VS 58: 1 (Barziya yr 1, B)93

cc) ša “of”: the periphrastic genitive and its use instead of the construct

Originally the determinative pronoun, “that of” (PSem *ṣu, cf. Arabic ǧū, ǧī t, Aramaic ǧī and Hebrew zūš) ša extended its meaning to create the relative clause.94 In the NB analysed here, a scant few examples of the determinative ša remain. Apart from the third example below, the determinative is usually written in apposition to a PN or LŪ, so that in reality ša is probably understood as a relative pronoun introducing a predicative prepositional clause:

(PN) ša muhhi suti “(PN) who (is) in charge of the sūtu (farm-lease) rent”
(CAD S 426b–427a)

ša muhhi quppi “he of the cashbox”,95 i.e. “the man in charge of the safe”, TCL 13 182: 1, 9–10, YOS 6 67: 19 (bēth U)

ša tabtišu a family name “Saltdealer”, passim

This most used particle of all had, by the time of Kuyunjik NB, already replaced the genitive construct except in certain frozen forms, and extended construct chains were very rare (Woodington, p206). This certainly applies to the NB analysed here, in which constructs continue to be much used in frozen forms. Listed below are those constructs still in consistent use. The transcriptions are based on the dictionary entries. Some logograms and common transcriptions (if they can be determined) are given. Since many of the prepositions operate regularly in construct (exx. libbi, pān, pūt, muhhi, etc.), see relevant entries for the prepositions.

93 Cf. the similar phrasing in the supēltu tablets Camb 349: 18, and Camb 423: 2.
94 For ša in relative clauses see III §1a, below.
95 (CAD Q p310b) To be contrasted with: PN šā LŪ UGU qu-up-I-pul in GCCI 2 130: 7–8 (Dar yr 22, U).
i) The frozen forms may be split into two categories:

1) Fully frozen:

   a-hi kaspi/zitti...a-hi...kaspi/zitti... “one half of the silver/share...the other half...of the silver/share...”

   babtu KU.BABBAR “balance of the (owed) silver”

   bit dullu “work station (?)”

   bit kili “prison” (=“detention house”)

   bit qatti “building extension”

   bit šatummum “grain or date storehouse”

   i-di LÜ-tá u hubul (UR,RA) KU.BABBAR iānu “there is no servant hire charge or interest on the silver”

   ina hūd libbiš, ina migir libbiš “of his/her own free will”

   izqāta AN.BAR “iron fetters”

   mišīl šatti “middle of the year”

   pi šulpu “cultivated field”

   pišt zitti “the major, or ‘titled’, share”

   qāt šibitti “corpus delicti” (=stolen property which has been recovered)

   rehet KU.BABBAR “the remainder of the silver”

   reš šatti “beginning of the year”

   šiš (ŠĀM, KI.LAM) gamrātu “total price”

   (n) šiqīl (GīN) kaspi “(n) silver shekel piece(s)"

Frozen forms involving infinitives:

   arāk ūmē, tūb libbi, bullut napšāte (TIN ZI.MEŠ) (in letter greetings) “(for) longevity, happiness, invigoration of the soul”

   epuš nikkassē (DŪ-uš NiG.SID) “the doing of the accounts”

   ina kanāk ṭuppi šuāṭi (IM.DUB MU.MEŠ) “at the sealing of that tablet”

---

96 For examples see YOS 6 235: 16 and VS 4 49: 19.

97 šulpu “stalk”. See CAD S III, p256f. pi šulpu is taken to mean cultivated land as opposed to newly broken land (taptitu) or arable land (šE.NUMUN).

98 An unexplained by-form of the infinitive epēšu. See CAD nikkassu A 1j, p228.
nadê lêtu “laziness” (literally, “dropping of the cheek”)

The frozen forms also include most of the family relationships and professions:

- *ab(i)* ummiš (AD AMA-šu) “his maternal grandfather”
- *umm(i)* ummiš (AMA AMA-šu) “his maternal grandmother”
- *bêl* (EN) piqitti “chief representative”
- *mâr šarri* (DUMU.LUGAL) “crown prince (son of the king)”
- *mâr šipri* “messenger”
- *puhur mâr banî* (UKKIN LÚ.DUMU.DŪ-i.MEŠ) “the assembly of free citizens”
- *rêš šarri* “(eunuch) assistant of the king”

2) Partly productive, where the nomen rectum may be a name, noun or infinitive:

- PN A-šu šá PN₂ A/DUMU PN₃ “PN son of PN₂, family of PN₃”
- *ina amat; qibît PN* “by the order of PN”
- *ina qât* (ŠU.II) PN eṭîr “he received from PN”
- *makkûr* (Nİ.GA) Eanna “property of Eanna”
- *pût...nasû* “be responsible for…(+ noun or infinitive in construct)” See examples below.

*ŠA.TAM* Eanna “šatammu of Eanna”

- *šîm* (ŠÅM, KI.LAM) PN “the cost of PN”
- *tuppi* (IM) PN ana PN₂ “letter from PN to PN₂”
- *tupšar* (LÚ.ŠİTA₃, DUB.SAR) Eanna “scribe of Eanna”

ii) Fully productive constructs. These do occasionally still occur:

- *se-e-nu qa-bu-ut* Nİ.GA FDN “sheep/goats from the pen belonging to Eanna”, YOS 7 146: 2 (Camb yr 3, U)
- ZAG A.ŠÅ.ME Nİ.GA¹⁰⁰ FDN u FDN₂ “tax on the fields belonging to the Lady-of-Uruk and Nana”, TCL 13 181: 5 (Dar yr 2, U)
- PN pu-ut e-ṭer KÛ.BABBAR na-ši “PN guarantees the payment of the silver”, Cyr 177: 13–14 (yr 4, B)¹⁰¹

---

⁹⁹ See the comment at the end of appendix §4 b ii.
¹⁰⁰ *imît eqšêti* makkûr.
¹⁰¹ To be contrasted with *pu-ut e-ṭer šá* KÛ.BABBAR PN...na-ši VS 4 60: 14...15 (Cyr yr 3, B).
pu-ut pu-ut su-ud-du-du re-3-i-tu, u ma-šar-tu, GU, bu-uš-tu, PN na-ši “PN is responsible for the caring, shepherding and guarding of the heifer calf”, Dar 451: 8–10 (B)

([isqu] ša PN ʿa PN, DUMU.MEŠ ša PN tā usur ši-lam DN “([the prebend] of PN and PN, sons of PN,) which is103 (for performing) before the image of Bel”, Joannes Strasbourg 3: 3–4 (Dar yr 6, B)

However, the periphrastic genitive using ša has superseded the construct in general usage:

[ma-ma]-nu ša URU u EDIN ma-la ba-šu-ḫu maš-ka-nu ša 4GAŠAN ša UNUG KI “anything of theirs, in the city or outside, whatever there may be, is pledged to the Lady-of-Uruk”, YOS 6 90: 14–16 (Nbn yr 7, U)

i-ga-ti ša E ša ina IGIL KÁ.GAL...ša PN “(regarding) the wall of PN’s house which is opposite the...Gate”, Dar 129: 1...2 ( yr 4, B)

The second ša in the last example is a relative pronoun in a prepositional clause. The following extracts are particularly interesting in that the common ground between this relative ša and the periphrastic ša can be seen clearly. In some of its occurrences ša can be construed as both a periphrastic genitive and as a relative pronoun. These are translated in italics and the transliterations are underlined:

ŠE.BAR ša ŠÁM ŠUK.HI.A...ša ma-aš-ak-ka...ša PN ʿa PN, DUMU.MEŠ ša PN, ša pa-ni ša-lam DN ša ina E DN, ša TA MN MU 4.KÁM a-di TIL MN, ša MU 6.KÁM RN “grain for the purchasing of...rations for the offering-prebend of PN and PN, sons of PN, of/which is for before the image of Bel of/which is in the Ninurta temple, of/which is from Simânû year four until the end of Taš ritu of year six of Darius”, Joannès Strasbourg 3: 1...6 (Dar yr 6, B)

(various people) ša a-na muh-hi ma-ša-hu ša ŠE.NUMUN ša GÎŠ.BÁN.MEŠ ša LU.EN.GAR.ME ša LU.ER-ŠE-E ša ina nap-har GARIN.MEŠ ša FDN...“(various people) of/who are in charge of the measuring of the cultivators’ farmers’ farmleases’ arable land, (cultivators) from/who are in the whole of the wetlands of the Lady-of-Uruk...”, YOS 6 232: 8–11 (Nbn yr 12, U)

dd) ša la and other words for “without, without the permission of”:104 šalānu and bal(ū). šalānu is used with personal pronoun suffixes.

(PN) ša la ma-ša-a-ḫu-tu, ig-bi u-ma “(PN) without being questioned, said as follows”, AnOr 8 27 (Nbn yr 12, U)

102 Contenau’s copy of these two signs indicates that he had not yet recognised the idiom puš našā since he appeared to interpret the signs as i-na.
103 Or, “of”. See the discussion below.
104 When followed by a person “without the permission of” is meant. (ina la is used for infinitives.)

85
ba-lu-uk-ku-nu la nu-gal-li-ib-šā “we did not shave him (for ordaining) without your permission”, AnOr 8 48: 21 (Cyr yr 5, U)

ù ba-al¹⁰⁵ PN PN₂...ù LU.DUB.SAR.MEŠ šā ē-an-na [?]hu-tu-ru iš-šu-²-na še-e-nu muš-šu-re-e-ti ul-tu EDIN i-na ŚU.II DUMU DU-i,MEŠ i-bu-ku-ma a-na NG.GA ē-an-na la id-dī-lmī³ “(regarding a herder who ran way after stealing sheep) and without the permission of PN, PN₂...and the Eanna accountants he took the holy staff and took the loose sheep/goats away from the open, out of the hands of the freemen and did not give them to the Eanna property”, YOS 7 146: 3–6 (Camb yr 3, U)

ū-ìl-di.ME...ina šā-la-na-₄-a (sic) a-na mam-ma la ta-nam-dīn “you are not to give the IOUs to anyone else without my permission”, TCL 13 181; 19...21 (Dar yr 2, U)

ZŪ.LUM.MA šā-la-nu-uk-ka a-na PN ul a-nam-dīn ki-i ZŪ.LUM.MA šā-la-nu-uk-ka it-tan-nu ...(reported speech) “I shall not give the dates to PN without your permission”. If he does give the dates without your permission...”, Dar 475: 6–8 (yr 18, B)

ee) tāḥ/tēḥ “adjoining”. Virtually always written DA¹⁰⁶ and used mainly in real estate documents. The reading tāḥ is made on the basis of the one NB example where it appears with a phonetic complement:¹⁰⁷

...SAG? KI KI.TA IM.MAR.TU DA-hu (or, tā-hu?) SILA ŚU.II-nu “the short side facing west next to Narrow Street”, BIN I 127: 11 (Nbk yr 15, U)

However, the first of the following may have a further example of tā-hu, since the sign following DA appears to be hu written over Ė erased:

Ē šā PN...šā DA x su-qu!-û rap-šā “the house of PN..., which is next to Wide Street”, VS 5: 1...2 (Dar yr 16, B)

Ē šā ina SILA šā ha-bur šā DA Ė PN...u DA Ė PN₂ “(regarding) the house in Habur street, next to PN’s house...and next to PN₂’s house”, Dar 410: 1...3 (yr 15, B)

ff) últu “from, since”, is used to refer to both time and place:

ri-ka-su šā IR-û-tu šā PN...šā ul-tu MU 35,KÁM RN...a-di MU 7,KÁM RN₂...a-na KŪ.BABBAR na-ad-nu... “the contract (describing) the slave-status of PN, in which, from year 35 of Nbk until year 7 of Nbn, he had been given for silver... (was read out)”, Nbn 1113: 8...11 (after yr 7, B), cf. YOS 17 302: 2–4, VS 6 96: 1–3, and elsewhere.

¹⁰⁵ There is some doubt as to the reading of these two signs. I have therefore given a large extract as context. CAD gives this as mala (conjunction, p146b): ma-al PN ıddinu.

¹⁰⁶ When US.SA.DU is used instead of DA, the reading itū (s.v. p, above) is assumed. The meaning is virtually the same as tāhu.

¹⁰⁷ Cf. also the lexical list Hh II (MSL V, p69): 249 DA fe-hu-um and 242 DA [fe]-h[u].
TA UD 5.KAM šá MN ina muh-hi i-ni-ia na-as-ka-ak “since the 5th of Nisan I have been bedridden (literally, “I am thrown down on my eyes”), CT 22 83: 6–8 (letter, after Dar yr 14, B)

ul-tu É kar-re-e il-su-um-ma-ul-tu KÁ É ka-re-e ša-ab-ta “he ran from the quay store and was caught (coming) from the gate of the quay store”, YOS 7 198: 17–18 (Camb yr 6, U)

n KÚ.BABBAR šá PN ul-tu KASKAL.II is-šu-ú “n silver which PN got from his business venture”, TCL 13 160: 5 (Camb yr 3, B)

PN GIŠ.UR.MEŠ ul-tu i-ga-ri šá PN, i-de-ek-ki “PN is to remove the beams from PN’s wall”, Dar 129: 6–7 (yr 4, B)

The ultu ša in the following is exceptional:

ul-tu GN a-na a-su-tu at-ta-si en-na a-ga-a ul-tu šá GN a-na e-ka-a-ni ki-i al-la-ka “I have gone out from Babylon on an expedition. Now then, after Šahrinu where do I go?”, YOS 3 106: 22–23 (letter, Cyr-Camb, U)

The example in YOS 7 146 is given in dd, above.

Note: Repetition of prepositions sometimes occurs, as in Dar 410 in ee, above and in:

28 GI.MEŠ ul-tu UGU pi-it-ri šá bi-rit É IM.U,LÚ šá É GAL-ú à bi-rit É IM.SI. SÁ “28 reeds(of property) from the unbuilt (?) land between the southern building of the big house and the northern house”, YOS 6 114: 8–9 (Nbn yr 5, U)

But not in simple strings of substantives:

ina DN₁,₁, u DN, u a-de-e šá RN u PN DUMU-šá it-te-mu-ú “in the names of DN₁,₁, and DN, and the oaths of Nbn and his son they swore”, YOS 6 232: 16–18 (Nbn, U), cf. AnOr 8 30: 13–15 (Nbn yr 13 , U)

a-na TIN ZI.MEŠ a-ra-ku u₉-mu tu-ub lib-bi à ū tu-ub UZU šá EN-ša ˓ša-la “I pray for the life, longevity and the wellbeing of mind and body of my lord”, YOS 3 45: 5–7 (letter, Cyr-Camb, U)

Garr (1985) comparing the use of prepositions in NWS dialects in a string of coordinated prepositions finds that Aramaic has a distinct tendency to repeat them.

One of his examples on p178 is:

b’rq wbšmyn ḫesem “in heaven and (in) Earth”
§3 Adverbs, adverbial phrases and interjections

ahāmeš “mutually” is treated in the dictionaries as an adverb. In earlier Akk dialects its adverbial function is clear but this is overlaid in the NB of this study by a reflexive pronominal function which is evident in the examples in which it is used with prepositions (b, below). It is generally accepted as an adverb owing to its conventionally adverbial -es (or -iš) ending. It may also refer to several parties. See also the AHw example (in ahāmiš pp17bf): pūt a-ha-(a)-meš našû, “they are mutually responsible”, in VS 15: 7: 12, and elsewhere.

a) ahāmeš on its own, “mutually, each other, one another”:

- a-<<na>>-di UGU šá a-ha-meš nim-ma-ru-ma “until we see one another...”, AnOr 8 56:15-16 (Cyr yr 7, U)
- ul i-tur-ru-ma a-ha-meš ul i-rag-gu-mu...ŠE.NUMUN...[ki-t?] 1 maš-ri-sá-nu a-ha-meš im-pa-lu “they are not to go back and make a claim against each other. They will be mutually responsible (or, “they are answerable to each other”) for the arable land according to their price”, TCL 13 190: 21...29 (Dar yr 12, B) cf. VS 5 38: 34 (given in b)

b) ahāmeš in combination with a preposition:

i) itti ahāmeš “with each other, jointly, together”:

- zu-‘-uz-ti šá É šá PN...šá PN,... u PN, it-ti a-ha-meš i-zu-zu “(concerning) the division of the estate of PN which PN,..., and PN, made jointly”, YOS 6 114: 1...4 (Nbn, U) cf. YOS 6 143 (Nbn yr 10, U)
- (area) šá PN u PN,... it-ti a-ha-meš im-hu-ru-ma it-ti a-ha-meš la i-zu-zu “(concerning) (a plot) which PN and PN, bought together but did not divide between them”, VS 5 39: 1...4 (Cyr yr 6, B)

...it-ti a-ha-meš a-na KASKAL.II iš-ku-uu “...they put jointly into a business venture”, Dar 280: 4-5 (yr 10, B)

For further examples see Iraq 13: 10...11 (U), Nbn 293: 8 (B) and Dar 379: 2, 60 (B).

In the Babylonian šupēltu (property exchange) tablets, ahāmeš is used with itti in the following standard phrase:

-tup-pi šu-pel-ti É.MEŠ...šá PN...ù PN,...it-ti a-ha-meš uš-pe-lu “a tablet (recording) the exchange of property...which PN...and PN,... exchanged with each other”, VS 5 38: 1...4 (Cyr yr 6, B) cf. also line 22 and the following:

108 Most of the examples are adverbs and adverbial phrases. For the idea that some adverbial phrases are prepositional phrases with ellipsis of a pronoun see the entries on ina libbi and itti. Interjections are indicated as such. Adverbs involved in the expression of time are given in §4, below.
a tablet (recording) the exchange of fields which PN, and PN₂ who included arable land which was the dowry of fPN his wife, made with one another, Camb 375: 7: 1...7 (yr 7, B)

ii) ana ahāmeš is limited to the Babylon texts:

A further example is in Dar 379: 68, but with a final broken verb.

c) akanna “here”:

i) In a local sense, akanna comes at the beginning of its clause:

"let me make him grovel here on the ground!"

YOS 3 19: 28 (letter, early Cyr, U)

PN EN liš-pu-ru(sic)-am-ma a-kan-na it-ti-šu li-id-bu-ub ı̄mamla ša ku-tu-laa (sic) a-kan-na! im-na-ru i-a-nu! “may Sir send PN for me(?) to speak with him here. There is no one here backing me up (literally, “looking behind me”)", CT 22 200: 15–21 (letter, Nbn? B)

ii) In a transferred sense, akanna is almost like an adjective or relative clause (ša akanna):

en-na PN...a-kan-na iq-ta-ba- umer-ma “now, PN...here has said...”, CT 22 127: 5...8 (letter, Dar yr 17? B)

lu-ū ti-i-de dib-bi lu ma-a-du a-kan-na ina UGU-i-ni bi-šu-  you do know that the rumours against us here are very bad”, YOS 3 19: 20–21 (letter, early Cyrus, U). Compare with the following:

ZÚ.LUM.MA gab-bi a-kan-na a-na šir-l-e ina ŠU II-fa ma-lu-ū “all the dates here are filling my hands to the brim”, 110 TCL 9 124: 10–13 (letter, 526–522, B)

---

109 See purpose clauses (§1 a iii, above). ludub is expected.
110 The idiom ana širrē malû means “to be full to overflowing”. See n23 in the appendix to part 2.
The position of akanna in the last two examples suggests it may actually be functioning as a predicate in all three: “PN...is here. He has said...”, “you do know that there are many rumours here. They are bad for us” and “the dates are all here. My hands are full to the brim”, respectively. Such an interpretation would explain the juxtaposition of gabbi and akanna in the third example. (There are no attestations of nouns with two adjectives in the corpora.) It is also possible that akanna may mean “thus, in the following way” in the first example. See CAD akanna A, A/I p259b [probably of WSem origin]. CAD has a separate entry, akanna B, for akanna = “here” (p260f).

Further Uruk examples are in the very similar YOS 3 17: 19, 48 and TCL 9 129: 17.

ana akanna, “here”:

d) akannak (addressed to one person), “there” is in NB only:111

LU.ŠITA, u GIŠ DA a-kan-na-ka “the scribes and the ledger are there”, (to one person) YOS 3 17: 28, TCL 9 129: 29 (letters, 533–526, U)

a-mur PN u PN, a-kan-na-ka “see, PN and PN, are there”, (to one person) YOS 3 66: 18–19 (letter, Camb? pre-526, U)

e) ana muhhi (Uruk) and ina muhhi (Babylon) “regarding (this); therefore” are found regularly in the following legal phrase:

LU.GAL-u šá-nam-ma a-na muh-hi ul i-šal-lat “No other creditor is allowed to take over (the assets)” YOS 6 90: 16–17 (Nbn yr 7, U)

LU.TUK-u šá-nam-ma ina muh-hi ul i-šal-lat Nbn 314: 9–10 (yr 8), cf. Nbn 1047: 13–14 (B)

111 See GINBr p16 and CAD p261bf. Note that akanna changes to akannakunu when more than one person is addressed. Oppenheim (1947, 120–121) says that in akannaka, -ka is really only a “deictic, i.e. distal element”, which became understood as a 2sg personal suffix to give the meaning “there, with you”, in Aramaic and Arabic. By analogy other personal suffixes were introduced (hence akannakunu). The “Dort-Deixis” demonstrative pronouns in classical Arabic have carried this idea to its full development, if Oppenheim is to be believed (see GVG vol 1 p318 and note 2, p322). The attested examples are:

dālīka: addressed to one male
dālíkmā: addressed to two persons (i.e. dual)
dālíkum: addressed to 2mpl
dālíkunna: addressed to 2fpl

Their composition is da (“that”)+ li (“to, for”) + (“you”, supposed, but in reality the deictic element) suffix pronoun.
Elsewhere, both dialects use *ana muhhi* and *ina muhhi* interchangeably:

\[ \text{PN } iq-bi \text{ um-}ma \text{ } \text{ŠE.NUMUN } ina \text{ UGU } e-ri-iš \]  
"PN said to me, 'therefore farm the land!'", AnOr 8 38: 10 (Cyr yr 2, U)

\[ ku-um \text{ a-}hi \text{ HALA-šu a-na muh-}hi \text{ i-te-}lu \]  
"He deducted as half of his share regarding it (i.e. the deal)", TCL 13 160: 7 and repeated in line 10 (Camb yr 3, B)

f) *anûn* “now” (?) Difficult. For the possible meaning “where?” see the examples and discussion in *ēkāni* in §6 b i, above (questions).

g) *arki*, *arku* “afterwards”:

\[ ár-ki \text{ } \text{PN } \text{a-}na \text{ } PN \text{ } iq-bu-ú } \text{um-}ma \]  
"on another occasion, PN and PN, said the following to PN...", TCL 13 181: 14...15 (Dar yr 2, U)

*arki* is also used to change the subject matter in legal documents dealing with separate topics:

\[ ár-ki \text{ } \text{PN... } \text{PN}_2 \text{ } a-\text{na } PN \text{ } iq-bu-ú } \text{um-}ma \]  
"on another occasion, PN and PN said the following to PN...,", TCL 13 181: 14...15 (Dar yr 2, U)

h) *elat*, *ana elat* “in addition; else”:

\[ mim-ma e-lat ina \text{SU.II-šu } ul \text{mah-rak} \]  
"I haven’t received anything else from him", YOS 6 193: 5–6 (Nbn yr 13, U) which continues:

\[ mim-ma ma-la \text{LU.mu-kin-nu e-lat } ú-ka-an-nu-uš1+\text{en }30 \text{ a-na } FDN \text{ } i-nam-din \]  
"anything else that a witness may convict him of, he is to give thirtyfold to the Lady-of-Uruk": 6–8

\[ a-\text{na e-lat } a-\text{na } PN \text{ at-ta-din...sah-le-e a-}na-ka a-\text{na e-lat } \text{<ana> } PN \text{ ina } SU.II \text{PN}_2 \text{ at-ta-din } "I gave to PN in addition...I myself gave cress in addition from PN}_2 \text{<to> } PN", \text{Dar 296: }6...11,15 (yr 11, B) \text{ a-}na \text{ e-lat-šu "in addition to that" (line 15), shows that } ana \text{ elat can also be used as a preposition.} \text{ 113}

i) *enna* (usually as interjection, “now (then)”) passim in letters:

\[ en-na \text{ } 6 \text{ MA.NA KU.BABBAR...šu-l-}la-nim-ma \]  
"now (then), bring the 6 minas of...silver", JAOS 36: 20 (letter, 538–532, U)

\[ en-na mim-ma šá ina \text{SU.II-šu ta-mu-}ur \text{i-}šam-ma kul-}lim-an-na-a-šú \]  
"now (then), bring and show us whatever you saw in his possession (literally, "hands")", TCL 13 170: 11 (Camb yr 5, U)

\[ \text{fn}\text{ }53 \text{ in } §2 \text{ j, above, discusses the possible nominal origin of elat.} \text{ 113}\]
adi mubi enna “up to now”:

mi-na-\textsuperscript{-}a-di UGU en-na lē-en-ku-nu ul āš-me en-na NĪG.SID šā ŠUK.HLA ep-ša-a-ma “why haven’t I heard news from you (mpl) up to now? Now do the ration accounts!” YOS 3 64: 10–14 (letter, 538–534, U)

j) ianū “if not, otherwise”:

ia-a-nu-ū a-na PN a-na mūh-bi lu-uq-bi-ma “if not, I shall definitely tell PN’, RA 11: 32–33 (letter, 533–532, U)

ia-a-nu-ū 10 MA.NA KŪ.BABBAR...liš-kū-nim-mu “otherwise, let them deposit ten minas of silver”, YOS 3 81: 23...24 (letter, Cyr–Camb, U)

ia-a-nu-ū ul a-na-ad-di-in GIŠ.BAN a-śar se-ba-tu-ni in-na-? “if not, I won’t give (it). Give the farming lease to whoever you want”, TCL 13 182: 8–9 (Dar yr 2, U)

k) ina libbi is an adverbial phrase meaning “therein, therefrom, inside”:\footnote{114}{It is a prepositional phrase being used adverbially, as noted in earlier Akkadian (AHw, p551a, MB, MA, NA). In VS 5 82 ina is removed in order to accommodate another preposition (in construct), mala in dul-šu ma-la lib-bi i-pa-uš “any work he may do therein...”, lines 11–12 (Dar yr 16, B).}

1 ME pi-i-tu bi-i-šu ina lib-bi u-maš-sar “he will abandon 100 bad bunches therefrom (i.e. from the total)”, Nbn 17, 11–12 (acc yr, B)

ina lib-bi 6̄1 GīN gīr-ā LĀ-ṭi PN...ina idi GIŠ.MĀ ma-hir “therefrom, PN has received 6̄1 shekels minus 1/24th (of a shekel) for the lease of the boat” ibid.: AnOr 8 40: 9...10 (Cyr yr 3, U)

LŪ.ERIN.MEŠ šā ina lib-bi it-ti-i-ni “the workmen inside with us” (i.e. in jail), YOS 7 97: 8–9 (Camb acc, U)

Further examples are in YOS 6 33: 9, YOS 3 113: 13, TCL 13 167: 6 (all Uruk). ina libbi (meaning “in which there is”) also occurs in relative clauses where the referents (here, zēru, igāru and zittu) would otherwise need to be resumed with a possessive suffix:\footnote{115}{It is therefore possible that ina libbi is an ellipsis of ina libbi and the Aramaic 3ms suffix. See the comments on itti, below.}

1 GUR ŠE.NUMUN...šā GIŠIMMAR.MEŠ sap-hu-tu ina lib-bi iz-zi-zu “(regarding) one kur of arable land in which scattered date palms stand”, Camb 286: 1...2 (yr 5, B)

i-ga-ri-...šā PN...GIŠ.UR.MEŠ ina lib-bi is-ba-tu “(regarding) a wall...in which PN fixed beams”, Dar 129: 1...5 (yr 4, B)

1 GIŠ.MĀ šā PN...šā HA.LA šā PN...ina lib-bi “(regarding) a boat of PN in which there is a share of PN”, AnOr 8 40: 1...2, (Cyr yr 3, U)
1) *inanna, eninni* “now”:

\[
i-na-an-na\quad PN...pa-qa-ri\quad u-šab-ši\quad “now GN...has made a claim”, Nbn 356: 23...25
\]

\[
(e-nin-ni\quad i-na\quad 9-ta\quad MU.AN.NA.MES\quad ár-ki\quad šá\quad 3\quad DUMU.MEŠ\quad ‘PN\quad la-pa-ni-ia\quad tul-
\]

\[
du...\quad “now, in nine years, by which time ‘PN had borne me three children...”,\quad Roth: 20--22 (Cyr yr 9, U)
\]

\[
a-di\quad i-na-an-na\quad PN\quad ina\quad IGI\quad PN₂\quad ú-šu-uz\quad “up to now, PN has been stationed with
\]

\[
PN₂”,\quad YOS 7 102: 18 (Camb acc, U)
\]

m) *itti* “in addition”:

\[
ù\quad NA^.KISIB-su\quad it-ti-*\quad i-na-as-sa-am-ma\quad “and he is to bring his seal in addition”,
\]

\[
YOS 7 113: 13--14 (probably Camb yr 1, U)
\]

\[
1\quad ME 70\quad KUŠ.ME\quad it-ti\quad i-nam-di-nu\quad “they are to give 170 skins in addition”,
\]

\[
TCL 13 165: 11--12 (Camb yr 4, U)
\]

\[
TÚG.HI.A...it-ti-i\quad a-na\quad PN\quad in-na->\quad “give (2pl) clothing...to PN in addition”,\quad BIN
\]

\[
1\quad 16: 14...22 (letter, Cyr--Camb, U)
\]

To explain this development from prepositional *itti*, von Soden considers that *itti* may be an adaptation of *itti* and the 3ms Aramaic suffix, i.e. -h π †116

n) *kapdu (kabdu?)* “quickly”, is common in letters:

\[
kap-du\quad lik-šu-du\quad “may he arrive quickly”,\quad YOS 3 21: 40--41 (letter, Cyr--Camb, U)
\]

\[
kap-du\quad šu-pur-āš-šu-nu-tā\quad dul-lu\quad li-pu-šu->\quad “quickly write to them to do the work”
\]

\[
YOS 3 17: 6--7 (letter, 533--526, U)
\]

Note the repetition for emphasis in:

\[
kap-du\quad kap-du\quad nu-bat-tu\quad la\quad ta-ba-ta\quad “quickly, quickly! Do not stay overnight!”
\]

\[
CT 22 83: 9--11 (letter, after Dar yr 14? B)
\]

Because *kapdu* cannot be connected with *kapādu*, CAD assumes that it must be an Aramaism, especially since the examples given have either a precative or a preterite (as a calque on the Aramaic imperfect, cf. AHw p443b for *kapdu* followed by Aramaic imperfect). However, there is no Aramaic adjective for *kpd*. HAL p434f has *kbd*, a root whose verb conveys “weightiness, importance, pressure”, and CAD A p26f has the adjective *kabtu* 2: “dangerous, serious, severe”, section 4: “important, influential”, \(\text{\`wîcht}\)

\[\]116 AHw p405 (n/spB). A similar development may also have occurred with *libbi* in *ina libbi* (k, above).
shares the feeling of urgency, importance and pressure with the Aramaic kbd, hence the idea “quickly”. If kapdu is an Aramaic loan word then there seems to have been a sound change from kbd.  

o) kūm “in exchange”:

\[ \textit{mim-ma ku-ú-mu ul id-di-nu} \] “he gave nothing in return”, BIN 2 115: 12–13 (Cyr yr 2, U)

p) malmališ “equally”:

\[ \textit{ma-al-ma-li-iš ú-za-²-a-zu} \] “they will divide equally”, YOS 7 90: 17–18 (Cyr yr 5, U)

i-na 1 PI ŠE.NUMUN-šá-nu zaq-pi ...mál-ma-liš HA.LA PN PN, u PN, “there is an equal share for PN, PN, and PN, in the 1 sùtu plot of planted arable land... belonging to them”, Dar 379: 66...67 (yr 14, B)

q) pānāt “before”:

\[ \textit{qaq-qar šá FDN pa-na-tu, URU šá FDN, “land of the Lady-of-Uruk formerly belonging to ál Bēlet-ša-Uruk”, } \] YOS 6 67: 15 (Nbn yr 4, U)

Babylon appears to prefer \textit{ina pāni} but there is only one rather broken example:

\[ \textit{[ina] pa-ni ITI.APIN MU 19.KÁM [?] a-na-ku a-na KÚ.BABBAR a-²ta-din} \]

...“before, in Arahsamna year 19, I gave for silver...”, Dar 574: 19–20 (yr 20, B)

r) šaddagad “last year”

\[ \textit{lib-bu-ú šá šad-da-qad EN liš-šá-² “may Sir take, in keeping with last year”, } \] CT 22 78: 20–21 (letter, 545–527, B)

§4 Expressions of time

a) ūmu “today”:\n
\[ \textit{a-di UGU u₄-mu a₄ ul iq-it} \] (or, \textit{iq-tu}! for \textit{iqti}) “to this day it is not finished”, YOS 3 19: 6–7 (letter, early Cyr, U)

---

117 Von Soden avoids the problem by offering a possible variant meaning for \textit{kapdu} (“to hurry”, \textit{kapdu} 5, p441b). For spellings from letters not in my corpora, which indicate NB \textit{kapdu} and not \textit{kabdu} see GINBr p112.

118 CAD \textit{šaddagad} §I p38ff. The interpretation of the last sign as GAD is based on \textit{šad-da-ga-ad} in TCL 13 231: 16. (The prosopography of this text indicates that it is end Nbk–early Nbn, Uruk.)

119 See GINBr p37. CT 22 83: 19, cited therein has simply ūmu in a broken context.
a-na muh-hi u₄-mu a, GIŠ.MÁ...ul ú-še-ri-iq\textsuperscript{120} “up to today the boat...has not been emptied”, YOS 3 66: 3...5 (letter, pre-526, U)

b) Ways of saying “daily”, “monthly”, etc.:\textsuperscript{121}

úmussu “daily” is common in letters, usually in a greeting:

\begin{align*}
u₄-mu-us-su &\text{ } 4DN 4DN, FDN u FDN, a-na TIN ZI.ME tu-ub lib-bi šá EN-ta ú-sal-la “daily I pray to Bēl, Nabû, the Lady-of-Unuk and Nanâ for the longevity and happiness of my lord”, YOS 3 8: 2–5 (letter, early Dar? U)\textsuperscript{122}
\end{align*}

\begin{align*}
ina GN u₄-mu-us-su pi-ir-ša-tu, it-ti-ia ta-dab-bu-ub &“in Babylon every day you are telling lies about me”, CT 22 74: 3–4 (letter, Dar, B)
\end{align*}

arhussu (? spelled ITI-us-su) “monthly”:

\begin{align*}
u₄-mu.MEŠ ŠU.HA-₄-tu šá ē-an-na šá ITI-us-su ina ITI ₅j u₄-mu man-za-al-ti šá PN “(regarding) the days for the monthly fishing duty of Eanna. In each month ₅j days is the duty for PN”, YOS 7 90: 1–2 (Cyr yr 5, U)
\end{align*}

c) Expressing a certain date in the past or future:

For dates in the body of a text the formula is: UD y.KÁM ša ITI.MN MU z.KÁM:\textsuperscript{123}

\begin{align*}
UD 8.KÁM šá ITI.ŠU MU ₅.KÁM =Kur-aš “on the 8th of Duzu, Cyrus year 5”, YOS 7 42: 13 (Cyr yr 5, U)
\end{align*}

\begin{align*}
UD 20 1.LAL.KÁM šá ITILKIN “on the 19th\textsuperscript{124} of Ululu”, TCL 12 88: 11 (Nbn yr 8, B)
\end{align*}

\begin{align*}
UD 16.KÁM šá ITIL.BÁRA “on the 16th of Nisannu”, YOS 7 78: 2 (Cyr yr 8, U)
\end{align*}

\begin{align*}
UD 7.KÁM šá ITI.ŠU “on the 7th of Duzu”, TCL 13 157: 10 (Camb yr 3, U)
\end{align*}

An exception to this rule is seen in Dar 358: 1:

\begin{align*}
a-na UD 28.KÁM šá ITI.AB šá MU 13.KÁM “on the 28th of Tebetu, year 13” (Dar yr 13, B)
\end{align*}

When the year is mentioned first, a preposition is not always necessary:

\begin{align*}
MU 3.KÁM =Kur-aš...MU ₄.KÁM =Kur-aš “in year 3 Cyrus...in year 4 Cyrus”, YOS 7 42: 2...5 (Cyr yr 5, U)
\end{align*}

\textsuperscript{120} ušriq (!) has an impersonal subject (VI §2, below).

\textsuperscript{121} “yearly” does not appear in my corpora but note the following: \textit{lib-bu-₄ šá MUANNA-us-su “as (has happened) every year”, YOS 3 42: 14 (letter, U)}.

\textsuperscript{122} cf. the earlier Uruk letters JNES 1993: 4, YOS 3 21: 3 and YOS 3 45: 3 (u₄-mu-su). For Babylon see CT 22 6: 2, CT 22 82: 3, CT 22 83: 3, and passim.

\textsuperscript{123} Contrast this with the order ITI.MN UD y.KÁM MU z.KÁM RN used in the dating of texts themselves.

\textsuperscript{124} This is the usual way of saying “19th” in these texts, cf. YOS 7 97: 3, below, \textit{d}.
When the month is mentioned first, *ina* is used:

*ina ITI.KIN MU 2.KAM =Kur-đš “in Ululu, Cyrus year 2”, TCL 13 134: 3 (Cyr yr 4, U)

*ina ITI ŠE IGI-đ “in the first Addaru”, VS 4 107: 5 (Dar yr 16, B)

d) References to a certain part of the day:

*mu-ši sa UD 30.KAM ša ITI.SU “on the night of the 30th of Duzu”, YOS 6 137: 6 (Nbn yr 7, U)

*ina ITI.GANUD 20 LLAL.KAM ina mu-ši... “on the 19th of Kislimu, in the night...”, YOS 7 97: 3 (Camb acc, U)

e) “Per month, per year” needs no introductory preposition:

ITI šul-lul-tú 1 GIN KU.BABBAR PN a-na PN₁ i-nam-din “PN is to give PN₁ \( \frac{1}{2} \) shekel per month”, BE 8 47: 4–5 (Nbn, yr 5, B)

and is used in the idiomatic phrase referring to the interest rate in the Babylon texts:

(2 minas \( \frac{1}{2} \) shekel of silver) ša ITI *ina muh-hi 1 ma-đe-e 1 GIN KU.BABBAR *ina muh-hi-šu nu i-rab-bi “(a debt of) 2 minas \( \frac{1}{2} \) shekel of silver which is growing at the rate of one shekel of silver against one mina per month (as interest) against them (i.e. the debtors)”, Nbn 314: 19 (yr 8, B)

...ša MU.AN.NA *ina muh-hi 1 ma-đe-e 12 GIN KU.BABBAR *ina muh-hi-ša i-rab-bi\[125\] “(a debt of 5 shekels) which is growing at the rate of 12 shekels of silver per mina per year against him”, VS 4 62: 4–6 (Cyr yr 6, B)

In the Uruk letter YOS 3 69 *ana* and ša may be translated “per”:

(LU.RIG,ME...5 u₉-mu dul-lu ip-pu-uš u i-hal-liq) u LU.HUN.GÁ.ME ša ITI LU 5 GIN KU.BABBAR a-na ITI-šá a-na i-di-šá i-na-đš-ši “(the širkus do the work for five days then disappear) and the labourers hired by the month, (each) takes per man five shekels of silver per month as his wage”, YOS 3 69: 6...12 (letter, 539–526, U)

BANIA ŠE.BAR šá 15 u₉-mu.ME a-na LU i-din “give 5 śātu of barley per 15 days to (each) man”, ibid.: 18–19

f) References to the long term future are rare:

FDN u FDN₉ šu-lum u TIN šá EN-ši-na a-na da-riš liq-ba-a, “may the Lady-of-Uruk and Nanâ grant the welfare and life of our lord forever”, (letter greeting) YOS 3 200: 3–4 (letter, early Camb, U)

\[125\] A subjunctive is expected, as in TCL 13 144: 2 (in III §1 a, below). See IV §5, below.
a-na u-mu ša-a-tú pa-ni-ia ú-šad-gil-ma “he transferred to me for the future”, Nbn 356: 14 (yr 9, B)

PN a-na u-mu nu-qu-tu mam-ma šá-nam-ma a-na la la-qé-e GIŠ.SUB.BA.MEŠ u NIG.SID šu-au-tu ṭup-pi iš-túr-ma “so that no one else could take their prebends and property in the future (literally, “for distant days”), he wrote a tablet”, CTMMA 2 54+Nbn 380: 14–15 (yr 9, B)

g) “x time ago”:

13 MU.MEŠ a-ga-a (trees)...a-na FDN ni-iz-za-qap...30 ŠE.NUMUN ni-iz-za-qap ...20 GUR u-hi-ni ina lib-bi i-te-lu-ú “13 years ago we planted (various trees) for the Lady-of-Uruk...we planted 30 kur of arable land and 20 kur of fresh dates came up from them”, YOS 3 200: 5–8 (letter, around Camb yr 1, U)

10 MU.AN.NA PN NIG.SID <šá Š>126 ŠU.II mim-ma ma-a-du ul-tu É [ka-re- e] 127 ina muh-hi-ia ú-še-es-si... Unclear. “10 years ago PN issued property from the storage wing, a lot, from the communal storehouse on my account...”, TCL 13 170: 5 (Camb yr 5, U)

10 MU.HI.A at-ta tašl/ú? šá-nu “10 years ago...” (Unclear. Comes at the beginning of a phrase), YOS 3 8: 23 (letter, early Dar? U)

h) adi ṭuppi ṭuppi, adi ṭuppi ana ṭuppi, ana ṭuppi ana ṭuppi

See Rowton (1951) for examples from a wider range of NB texts. In my corpora, ṭuppup appears to refer to a period of time in the future, for covering the payment of loans or rent. The contexts suggest that this period of time is either unspecified (i.e. “until further notice”) or has been fixed according to the accepted practices, thereby not needing elucidation (cf. NRVG1 p52f, “agreed-on time”). Interest payments are not mentioned either (cf. Camb 348, below). The repetition of the word ṭuppi is perhaps to emphasise that the deal is “up to and including the agreed-on time”. The texts normally give the start date for the deal but not a termination date:

| MA.NA KU.BABBAR šá ú-ra-ši-šú a-na ša-ra-pu šá a-gur-rú šá PN ul-tu MN MU 1.KAM...a-di ṭup-pi a-na ṭup-pi PN₁ ina ŠU.II PN e-šir “PN₁ has received half a mina of silver from PN, for his deputising job of baking bricks for PN, which goes from Tāšittu yr 1...up to and including the agreed-on period” Camb 88/419: 3...7 (Written 6 weeks before the start date. Yr 1, B) |
| 1 MA.NA 10 GĮN KU.BABBAR šá PN ina muh-hi PN₁,...u PN...a-di ṭup-pi ṭup-pi KU.BABBAR a’ 1 MA.NA 10 GĮN ina SAG.DU-šú i-nam-din “(regarding an IOU of) 1 mina 10 shekels of silver of PN, owed by PN₁ and PN. By the |

126 Since NIG.SID and šá É look the same in NB the sense of this line improves if a haplography of NIG.SID is assumed.
127 Restored after lines 15 and 20.
agreed-on period he is to return the 1 mina 10 shekels capital”, Camb 348: 1–8

(“regarding a house for rent) which he gave to PN for business purposes until further notice (or, “for and including an agreed-on period”)”, Dar 499: 5–7 (yr 20, B)

Notes on the derivation of $\text{tuppu}$

Von Soden gives $\text{tuppu}$ a suggested derivation from $\text{tapāpu}$, “to be very full” (AHw p1349b). In trying to find a meaning for $\text{tuppu}$ from the etymology, Rowton links the root $\text{tpp}$ to the Arabic root $\text{tff}$ which has the “basic motive” of adding or subtracting the bit needed to either overfill or underfill a measure, or to just do it exactly (194b–197). An idea of “approaching the exact measure” would apply in each case. From this, Rowton concludes that $\text{tuppu}$ comes to mean a proper “end-bit” of a period of time (cf. end p195, “the edge portion, the portion at the limit, the marginal portion”) and also that $\text{adi tuppi (ana) tuppi and ana tuppi ana tuppi}$ both mean “up to, and including, a proper period of advance notice”. What this may indicate and what is supported by the NB texts in my corpora is that the $\text{tuppu}$ may be a period of notice (leeway or clearance period) at the time of the deadline for completion of a contract or loan and I have interpreted $\text{tuppu}$ in this way.

128 This is virtually the whole of the text in the document, the last phrase before the witness list being: 1+en pu-ut 2-ū na-šu-ū “one is responsible for the other”.

129 $\text{tuppu}$ does not appear to mean “tablet”. At the very least, if the term meant “(the contract runs) ‘from one tablet (i.e. the start of the contract) to the next (i.e. the end of the contract)’”, then $\text{ašu tappi adi tappi}$ would be expected.

130 In Lane (1984, p1857bf), most of the words with the root $\text{tff}$ have the meaning of approaching, being short of. Only $\text{aša(t)}$ has the meaning “the quantity that is above the measure” (p1858b). [In modern literary Arabic $\text{tff}$ is attested only as D, “to make deficient, scanty”; “to be stingy, scamping” (Wehr, 1976, p561b). The adjective $\text{tašf}$ is “deficient, slight, trivial”.]
Chapter III: Subordinate clauses

§1 Relative clauses

The most common relative clauses are those using the relative particle ša. In its function as a relative pronoun ša is used when it is the subject or direct object of its clause or in nominal clauses. As a particle (see v, below) ša is used to express what in English are the cases when the relative pronoun is not the subject or direct object of its relative clause (i.e. English “to whom”, “in which”, “of which/whose” etc.).

Notes

• In Akkadian, the relative clause, as well as the main clause, may be nominal or prepositional (see a ii, below). Alternatively, a predicative adjective (stative) may be employed (see a iii, below).

• For ša as periphrastic genitive (“of”) see II §2 cc, above.

• For ša as a subordinating conjunction (“that”) see §2 k, below.

a) Relative clauses involving ša

The cases (subj, obj, nom, abbreviated from subject, object or, in a nominal or prepositional clause) firstly of the governing noun (antecedent) within the main clause and then of ša within its own relative clause are given abbreviated in parentheses:¹

i) ša in verbal clauses:

DUMU-šú šú ša ina lib-bi la i-pal-lâh-šú HALA ina lib-bi ul i-teq-qi “any son of hers who does not respect he-er-... will not receive a share”, Rutten: 8–9 (Nbn yr 1, B) (subj, subj)

LÚ?-tú ha-liq-tu u mim-ma šá KASKAL.II-šú-nu šá il-la-a...a-ha šú-nu “(regarding any) lost slave or anything in their business venture, that may crop up...they are to share alike”, TCL 13 160: 13–14 (Camb yr 3, B) (nom, subj)

(eli) PN...šá la in-nam-rù...“(against) PN...who was not observed...”, Iraq 13: 23...25 (Camb yr 2, U) (non-direct obj, subj of passive verb)

2 MA.NA KÚ.BABBAR šá u PN, ŠÁM A.AŠ-ši-na šá PN a-na KÚ.BABBAR i-šá-am-ma “(regarding) two minas of silver for ŠÁM, the price of their field, which PN bought for silver”, Nbn 359: 1...5 (yr 12, B) (nom, obj)

¹ So that in the first example, maru is the governing noun in a verbal clause; it and ša are both subject case. In the second example, ša refers to amēluttu halīqtu u mimma ša harrān(i)šun in a nominal clause, and ša is the subject in a verbal clause.
ii) ša in a nominal or prepositional clause:

šE.NUMUN u me-re-šá šá e-liš šá-šá-a šá 1, eš-šá GAB KÁ.GAL DN
"(regarding) crop and arable land which is upstream and downstream from
the New Canal, opposite the Enlil Gate", Dar 80: 1–2 (yr 3, B) (prep phrase, nom)

LU.U.DU,MEŠ šá É ka-re-e šá it-ti PN i-šá-al-la “the storehouse doorkeepers who
were with PN were asked”, TCL 13 170: 15–16 (Camb yr 5, U) (obj of verb with
impersonal subject, 3 nom)

(4 people) šá ina muh-hi ma-šá-hu šá šE.NUMUN LU.e-mi-de-e u LÚ.SÍTA.,
MEŠ šá a-na muh-hi ma-šá-hu šá šE.NUMUN “(4 people) who are in charge of
measuring the arable land, who are the estimators and accountants in charge of
measuring the arable land (swore an oath)”, AnOr 8 30: 6–7 (Nbn yr 13, U)
(subj, nom)

There is some confusion as to the syntax of the following two examples. See the
discussion in ša as preposition (“of”):

PN...šá UGU qup-pu é-an-na... “PN...who is in charge of the safe of Eanna...”,
TCL 13 182: 1 and 9–10 (Dar yr 2, U) (subj, nom)

and: a-na PN šá LÚ UGU qu-up-pu[x?] i-din “give to PN who is the man in charge
of the safe...”, GCCI 2 130: 7–8 (Dar yr 22, U) (non-direct obj, nom)

It is even possible to have relative clauses within prepositional clauses:

UDU.NITA.ME ina UNUG.KI šá al-la šá ina EDIN ma-a-du-½ u šá ub-ba-du “the
sheep in Uruk apart from those in the open are many and are worth half (their
usual value)”, YOS 3 87: 25–27 (letter, 533–526, U) (nom, nom in prepositional
clause with alla, nom in prepositional clause with ina)

iii) ša in a clause with a predicative adjective (verbal or otherwise). Since predicative
adjectives lend themselves well to describing a coincident state or situation
relevant to the topic in the main clause they are often used in relative clauses as:

x-[ša + adjective]-main clause:

1 AB.GAL...šá 1 kakl-kab-tu šé-en-de-ti šá ul-tu GIŠ.APIN šá PN...ina SU.II
PN,...ab-ka-tu, “(regarding) one cow...marked with a star, who was brought from
the plough-fief of PN...via PN”, AnOr 8 38: 1–4 (Cyr yr 2, U) (prep phrase, nom)

hu-us-su šá it-ti É ka-a-re te-pu-dá ina IGI PN “the hut built onto the storehouse is
at the disposal of PN”, Nbn 499: 18–20 (yr 11, B) (nom, nom)
iv) *ša* as an independent pronoun, “whoever”, referring to persons already identified:

šā al-la ITI it-ti-qu ki-i EŠ.BAR KU.BABBAR i-dī GIŠ MA i-nam-di-nu whoever exceeds the month, according to the decision, is to pay the silver for the remainder of the boat”, AnOr 8 40: 12–14 (Cyr yr 3, U) ([subj], nom)

šā ina ma-aš-sar-ti-šu i-sē-el-lu-a hi-šu ša PN...i-šad-dad “whoever is lax in his watch bears the penalty (of a transgression against)” Gobryas”, GCCI 2 103: 10...12 (Camb acc, U) ([subj], subj)

šā qer-bi i-šir “whoever is available (literally, “nearer”), pays”, Camb 68: 16 (yr 1, B) ([subj], nom)

a-qab-bi-ma šE.BAR ina IGŠ-šu ul ib-ba-ku-nim-ma ul i-nam-din-nu-nu...šā mam-ma ša SE.BAR ina IGŠ-šu ab-kan-nim-ma a-na PN in-na... “I’m saying that he who ([subj], nom) has barley at his disposal—they are not bringing and giving it to me... that whoever (subj, nom) has barley at his disposal ‘bring and give it to PN (i.e. “me” in direct quotation)””, CT 22 73: 7...14 (letter, early Dar, B).

For further comments on the reported speech in this letter see §4 a, below.

v) When *ša* is a relative particle, i.e. the genitive or non-direct object in its clause (abbreviated to *gen*, *nondir*), the antecedent is resumed with a possessive or accusative pronominal suffix in its relative clause as in all Akkadian dialects. Examples are limited in these corpora:

LU.nu-kin-né-e šā ina IGŠ-šu-nu... “the witnesses in front of whom...”, Nbn 68: 1(yr 2, B) (nom, gen)

(people) šā PN,... it-ti PN, u PN,...iš-pu-ru-šu-nu-ti...it-te-mu-ū...“(various people) who PN sent with PN and PN...swore...”, YOS 6 232: 13...18 (Nbn yr 12, U) (nom, dir obj)

PN šā PN, IM.DUB DUMU-ū-ti-šu iš-tu-tu-ma GIŠ.SUB.BA-šu pa-ni DN pa-ni-šu ū-šad-gi-li...DUMU LU.KU, É FDN la-bi-ri šu-ú “PN, whose document of adoption PN, wrote and transferred his (own) prebend for DN to him...is the son of the former ērib-bīti of FDN”, AnOr 8 58: 24...26 (Cyr yr 5, U) (nom, gen)

---

4 Which continues with another relative clause: šā PN,...a-na SUM.SAR a-na PN,...id-din-nu... “which PN gave to PN, for garlic”, 1...5.

5 As given in CAD šadādu 2 h.

6 See ana as non-direct object (V §6, below) for a discussion on the choice of the term as opposed to “indirect object”. For any noun phrase which is not the subject or direct object in its clause I use the term “nondirect object”. Note also that the antecedent is not resumed on the adverbial phrase ina libbi in i-ga-ri...ša PN...GIŠ.UR.MES ina lib-bi is-ba-tu “(regarding) a wall...in which PN fixed beams”, Dar 129: 1...5 (yr 4, B) (nom, nondir obj). See also AnOr 8 40: 1...2 and further examples and comments on ina libbi, in II §3, above.
GÊME šá PN...LÚ.NA.GADA šá re-e-hi šá FDN ina muh-hi šá a-na-ku “I am the (female) slave of PN... the cowherd, who has a debt remaining to the Lady-of Uruk against him”, AnOr 8 56: 5...6 (Cyr yr 7, U) (nom, nom)

ša the relative particle may function as an independent pronoun:

šā PN e-li-šu u-kin-nu um-ma “that about which PN confessed (was) as follows”, Nbn 1048: 7–8 (yr 17, B) (nom, nondir obj)

ša da-ba-ba an-na-a in-nu-á DN u FDN ZAH-šu liq-bu-u “of anyone who changes these statements, may Anu and Istar decree his demise”, YOS 7 17: 15–17 (Cyr yr 3, U) ([gen], subj)

b) Relative clauses using mala, mimma mala “any...that, everything that, whatever quantity (as yet unspecified)...that, however much”

mimma mala is used when the antecedent is not specified, with one exception.

The examples indicate that in its clause as relative pronoun mala can be subject or direct object only and therefore is not resumed. Because of its similarity to ša the same categories can be used to identify the values of mala and its governing noun. Again the cases of the referent and the relative are given:

The observation made by Woodington on Kuyunjik NB that “mala’s quantitative sense (“as much as, as many as”) has been blurred by its use as a simple relative” (§91, p231f) more or less applies here.

i) mala in verbal clauses:

ŠE.BAR ma-la PN i-qab-bu-u PN, a-na PN it-tan “whatever quantity of barley (i.e. as yet unharvested or unspecified) PN is talking about, PN, is to give to PN”, Dar 358: 12–13 (yr 13, B) (obj, obj)

šal-ši HA.LA ina mim-ma ma-la ina lib-bi iz-qu-pi ik-kal “he may consume a one-third share from what he planted there”, YOS 6 33: 13–14 (Nbn yr 3, U) (obj, obj) cf. 11–12, also Camb 373: 7–8 and:

mim-ma ma-la LÚ.mu-kin-nu ú-ka-nu-uš 1+en 30 a-na FDN i-nam-din “anything that a witness may convict him of he is to give thirtyfold to the Lady-of-Uruk”, YOS 7 24: 6–8 (Cyr yr 2, U) (obj, obj) cf. YOS 6 193: 6–8

Sometimes there can be more than one relative clause dependent on mala:

mim-ma ma-la e-lat ú-il-ti.ME LÚ.mu-kin-nu a-na PN u PN, u-kan-nu 1+en 30 a-na FDN i-nam-di-nu “anything (which is) in addition to the IOUs, that a witness may convict PN and PN, of, they are to give thirtyfold to the Lady-of-

---

7 Cf. the similar Babylon curses in Nbn 697: 19–21 (in c, below) and Cyr 277: 16–19, which have ša dib-bi an-nu-tu BAL-ú and ša da-ba-ba an-na-1 i-nu-ú, respectively.
8 For mala as preposition, see II §2 above.
9 See below.
10 See Dar 378: 10–11 cited below.
11 Lilit and Nabû-ahhê-bullit are names for the same person.
Even more unusual is:

\[a-na\ KASKAL,II \ mim-ma \ ma-la \ ina \ URU \ u \ EDIN \ ina \ muh-hi \ ZÚ.LUM,MA \ a' \ ME \ GUR \ u \ ŠE.BAR \ a, \ 50 \ GUR \ ip-pu-uš-su.' \ PN \ à \ PN, \ a-ha-ta \ sû-nu \ “as \ for \ the \ business \ venture, \ whatever \ they \ make \ on \ the \ 100 \ kur \ dates \ and \ the \ 50 \ kur \ barley \ in \ the \ city \ or \ outside, \ they \ are \ to \ share \ alike”, \ Dar \ 395/396: \ 5-8 \ (yr \ 3, \ B) \ (nom \ or \ prep \ phrase \ with \ \(ana...ahât \ sûn, \ mimma \ mala\) as obj in verbal clause with \(ippûsû))

\[ii) \ mala \ in \ nominal \ or \ prepositional \ clauses. \ Syntactically, \ these \ examples \ are \ hardly \ different \ from \ those \ given \ in \ mala \ as \ a \ preposition \ (II \ §2 \ w, \ above). \ However, \ the \ contexts \ indicate \ that \ “any” \ or \ “whatever” \ are \ intended \ and \ that \ our \ uncertainty \ in \ understanding \ mala \ as \ a \ conjunction \ or \ preposition \ has \ arisen \ through \ Akkadian’s \ ability \ to \ operate \ with \ verbless \ relative \ clauses.

\[ŠE.NUMUN \ ma-la \ ina \ lib-bi \ ina \ mar-ri \ AN.BAR \ ip-pu-šû \ “he \ will \ work \ the \ arable \ land, \ as \ much \ as \ there \ is \ there, \ with \ an \ iron \ spade”, \ Dar \ 35: \ 8-9 \ (yr \ 2, \ B) \ (obj, \ prep \ phrase)

\[dul-lu \ SIG,HLA \ GI \ u \ GIŠ.ÜR \ ma-la \ lib-bi \ ip-pu-uš \ a-na \ muh-hi \ PN \ i-ma-an-\nu \ “jobs --- \ whatever \ may \ be \ there, \ (requiring) \ bricks, \ canes \ or \ beams --- \ he \ is \ to \ do \ and \ put \ on \ the \ account \ of \ PN”, \ VS \ 5 \ 82: \ 11-13 \ (Dar \ yr \ 16, \ B) \ (obj, \ prep \ phrase)

However, \ there \ is \ some \ possibility \ that \ \(ip-pu-uš\) \ is \ part \ of \ the \ relative \ clause: \ “(any) \ jobs...that \ he \ may \ do \ there \ he \ is \ to \ put \ on \ the \ account \ of \ PN”, \ i.e. \ taking \ \(ma-la \ lib-bi \ ip-pu-uš\) \ as \ a verbal \ clause \ (obj, \ obj).

\[iiii) \ With \ predicative \ verbal \ adjectives. \ Most \ common \ is \ mala \ basû, \ usually \ written \ \(ma-la \ ba-šu-ú\), \ passim \ in \ the \ Babylon \ texts:

\[...u \ mim-mu-šû \ să \ URU \ u \ EDIN \ ma-la \ ba-šû-ú \ maš-ka-nu \ să \ PN \ “...and \ anything \ of \ his, \ whatever \ there \ is, \ in \ the \ city \ or \ outside, \ is \ PN’s \ pledge”, \ Nbn \ 344: \ 8-9 \ (yr \ 9, \ B) \ (nom, \ nom), \ cf. \ YOS \ 6 \ 90: \ 14-16 \ (Nbn \ yr \ 7, \ U)

Further \ examples \ of \ mala \ basû \ in \ the \ Uruk \ corpus \ are \ limited \ to:

\[[it-te-mu-ú]\ \[ki-i \ mam-ma \ i-na \ lib-bi \ [KAR\]-šû \ i-na \ È. MEŠ \ să \ URU \ ma-ха-zu \ ma-la \ ba-šu-ú \ să-la-nu-un-nu \ dul-lu \ i-te-ép-šû... \ [they \ swore] \ “no-one \ in \ his \ common \ storehouse \ (?12) \ in \ the \ holy-city \ temples \ will \ do \ any \ work \ without \ our \ permission...”, \ Weisberg \ 1: \ 24 \ (538-534, \ U) \ (obj, \ nom) \ see \ also \ line \ 19 \ (\(ma-la \ ba-šu-ú\))

\[ki-i \ mim-ma \ ma-la \ [a-šu-ú] \ PN \ ul-tu \ È \ ka-re-e \ ina \ muh-hi-[šû] \ ú-še-šu-ú \ u \ mim-\ma \ ina \ ŠU.II-šû \ ni-mu-ur (three \ people \ swore) \ “PN \ issued \ nothing \ of \ whatever \ there \ was \ from \ the \ storehouse \ on \ [his (=another \ person)] \ account \ and \ we \ saw \ nothing \ in \ his \ possession”, \ TCL \ 13 \ 170: \ 19-21 \ (Camb \ yr \ 5, \ U) \ (obj, \ nom)

\[12 \ Weisberg \ gives \ “competency, \ jurisdiction” \ as \ his \ translation \ of \ kăru. \ Perhaps \ karû \ “common \ stores \ or \ stocks” \ is \ meant. \ cf. \ Dar \ 379: \ 68 \ pa-qa-ru \ să \ ina \ UGU \ HALA-Sû-NU \ ib-ka-âš-šu-ú \ ina \ ka-ri-šû-NU \ ú-mar-ra-qu-nim-ma \ a-na \ a-ha-mes \ i-[x...] \ “any \ claim \ that \ arises \ regarding \ their \ share(s), \ they \ are \ to \ clear \ it \ from \ their \ own \ stocks \ (?) \ and \ settle \ it \ amongst \ themselves \ (assuming \ izizzû \ or \ izuzzû \ or \ iturû).
Further examples involving verbal adjectives:

\[ \text{SE.NUMUN...ma-la } \text{ina } \text{lib-bi } \text{sa-bi-tu-...ni-is-sur} \text{ “any land that is contained in there, let us protect”}, \text{ YOS 7 156: 9...10 (Camb yr 3, U) (obj, nom)} \]

\[ \text{u-mu ma-la } \text{PN } \text{bal-tu...}(\text{NI.G.SID-šu ma-la } \text{ba-šu-ú } \text{a-ki-i IM.DUB-šu } \text{ina } \text{IGI PN}) \text{ “as long as (literally, “any days that”) PN lives..., (his possessions, whatever they may be, are at PN’s disposal according to his document”), } \text{Cyr 277: 13...15 (yr 7, B) (nom, nom), cf. the similar} \]

\[ \text{u-mu ma-la } \text{PN } \text{bal-tat } \text{i-na } \text{UR,RA KÜ.BABBAR-šu } \text{PN } \text{ŠUK.HI.A } \text{mu-sip-tu, } \text{...i-nam-din} \text{ “as long as } \text{PN lives, PN is to give (her) food and clothing out of the interest in her silver”}, \text{ Nbn 65: 16 (yr 2, B) (nom, obj)} \]

Note the unnecessary ša in the following, presumably under Aramaic influence or in confusion with ūm ša:

\[ \text{u-mu ma-la } \text{ša } \text{PN } \text{bal-tu } \text{ta-pal-la-ah-šu} \text{ “for as long as PN lives, she is to serve him”}, \text{ YOS 7 66: 17–18 (Cyr yr 7, U) (nom, obj)} \]

iv) mimma mala and mimma ša. As stated in the observations below, Woodington observes that there is little difference in usage between ša and mala in Kuyunjik NB. In the following two examples mimma ša and mimma mala appear to be interchangeable but such an occurrence is by far the exception to the rule in the NB discussed here.

\[ \text{mim-ma ša } \text{ina } \text{pa-ni } \text{EN-ia } \text{ba-nu-ú } \text{EN } \text{li-pu-šu “whatever Sir thinks is good, may Sir do”}, \text{ YOS 3 8: 30–31 (letter, early Dar? U) (obj, nom)} \]

\[ \text{ki-i } \text{SE.BAR } \text{u } \text{ki-i mim-ma } \text{ma-la } \text{pa-ni-ka } \text{ma-kir } \text{a-na } \text{AD-ia } \text{a-nam-din} \text{ “I shall give to my ‘father’ barley or whatever pleases you”}, \text{ CT 22 182: 20–22 (letter, pre-526, B) (obj, nom). The use of mala as opposed to ša here may indicate that the mimma of the first example is less specific than that of the second.} \]

v) mala as pronoun, with the relative ša:

\[ \text{mal ša } \text{ina } \text{lib-bi } \text{ip-pu-šu [erasure?]} \text{ PN } \text{a-na } \text{UGU } \text{ram-ni-šu } \text{i-man-nu “anything}^{13} \text{ that he (the tenant) does there, PN (the lessor) is to put onto his own account”}, \text{ Dar 378: 10–11 (yr 14, B) (obj, obj)} \]

Observations

Woodington noted that mala and ša “had become almost interchangeable semantically and grammatically” in Kuyunjik NB (p231). The examples in eighth-century Nippur NB indicate a similar lack of distinction (Cole, 1996, p338). However, in the NB covered here, if the case of the antecedent is examined, it is possible to see that there is a significant (on the basis that there are several dozen

---

13 It is possible to read Ė, i.e. “house” rather than mal, but the context and terminology suggest mala (pronounced mal) is intended.
examples of relative clauses using *mala* or *ša*) semantic difference between *mala* and *ša*:

- *mala* is used when the antecedent is either caseless (i.e. in a verbless clause)\(^{14}\) or the object of its relative clause.\(^{15}\)

- If the antecedent is the subject or *regnens* (of a genitive construction) in the relative clause then this has the effect of rendering it as defined and *ša* is used.\(^{16}\)

- *ša* is used as the object of its relative clause if its referent is a specific being or item (singular or plural).\(^{17}\)

The second point explains why *ša* is used in the following example, rather than *mala*, even though *seḥū* and *paqiranu* refer to people making hypothetical objections or claims:

\[pu-ut \text{LU.} \text{se-hi-i} \; \text{at} \; \text{LU.} \text{pa-qir-[a-nu] ša ina UGU PN iib-} \text{ba-} \text{aš-šū PN}_2 \text{ na-ši “PN}_2 \text{ is responsible for anyone making an objection or claim that may arise regarding PN”.} \; \text{YOS 7 114: 9–11 (Camb yr 1, U)}\]

There is just one exception to this pattern in the two corpora:

\[\text{LÚ.} \text{ki-miš-ru, é-an-na ma-la ina tup-pi šaṭ-ru a-na PN…at PN}_2 \text{ iq-bu-ū… “the colleagues of Eanna, who were recorded on the tablet said to PN…and PN}_2….”, \; \text{AnOr 8 48: 23…24 (Cyr yr 5, U) (subj, nom)}\]

These people and their professions are given in the first 16 lines of the record, where they are addressed by the two authorities to whom they now speak in the extract cited. Since the *kiništu* have been identified, the uncertainty implied by *mala* is not appropriate, although it is likely that “all that” may be intended, i.e. *mala* <*ša*).

c) Relative clauses without a relative particle\(^{18}\)

Ravn’s analysis of this type of clause in OB, using *awāt iqbu* as his example (1941, p5), led him to conclude that an antecedent, if already mentioned somewhere earlier in the proceedings, is now being referred to without emphasis. He contrasted this with *awātum ša iqbu* where, he argued, the emphasis is focussed on the antecedent. Von Soden prefers to state that the rules regarding omission are not yet

\(^{14}\) Excluding prepositional clauses, and not counting the common *mala* bašū, the corpora have four examples.

\(^{15}\) 15 examples found in the corpora.

\(^{16}\) I have found at least 25 examples in the corpora.

\(^{17}\) I have found 10 examples in the corpora (again discounting prepositional clauses).

\(^{18}\) Cf. OB “*kasap išqulu*” in the Hammurabi Law Code.
as well ascertained as they have been for Arabic (GAG §166). The few examples (all from Babylon) in the dialect under analysis here indicate that the pattern observed by Ravn in OB was paralleled in NB.

\[\text{šá dib-bi an-nu-tu BAL-u rik-su PN ir-ku-su-ma a-na PN...id-di-nu i-he-ep-pu-ú DN û* FDN hal*-la-qi-šá liq-bu-ú 19 }\]

\[\text{“he who contravenes these statements and destroys the contract PN made and gave to PN... may Marduk and Šarpanitu decree his demise”, Nbn 697: 19...21 (yr 13, B) }\]

\[\text{pa-qi-ra-nu kás-pi im-hu-ru a-di 12 TA.ÁM i-ta-na-ap-pal “(any unlawful) objector is to pay twelve times the silver he received”, Nbn 293: 35-36 (yr 8, B), cf. also VS 5 38: 38 (B), Dar 227: 12 (B) }\]

§2 Subordinating conjunctions

In the earlier Babylonian dialects the verb in the subordinate clause appears in the subjunctive. In the NB analysed here, the subjunctive continues to be clearly represented in the non-ventive unsuffixed singular forms of third weak verbs. In the other cases the preference for Cu signs at the ends of verbs suggests the scribes know of the subjunctive -u ending although it is probably no longer spoken.20

a) \text{adi “until”:

\[\text{PN...maš-ka-nu šá PN a-di KÚ.BABBAR a, 9 GÍN PN; in-né-te-ru “PN is the pledge of PN until PN, is repaid the (aforementioned) 9 shekels of silver”, YOS 6 163: 6...10 (Nbn yr 11, U) }\]

\[\text{LUGÁL-u šá-nam-ma a-na muh-hi ul i-šal-laṭ a-di ŠÉ.BAR a, n KUR a-na FDN i-nam-di-nu “no other creditor is to lay claim until he gives the (aforementioned) n kur barley to the Lady-of Uruk”, YOS 6 90: 16-17 (Nbn yr 7, U) }\]

b) \text{adi la (la’?21) “before”, literally, “until not” is used with verbs in the present-future:

\[\text{a-di ia-i al-la-ka uz-nu šá EN-ia a-na UGU ŠUK.HLA ap-te-ti “before I go I hereby inform Sir regarding the rations”, YOS 3 45: 8-11 (letter, Cyr–Camb, U) }\]

\[\text{cf. ibid, line 21 and YOS 3 81: 26 (written by the same person and all spelled a-di(-i) la-i) }\]

\[\text{LU.ŠÁ.TAM a-na GN it-tal-lak a-di la a-na ku-tal-la i-né-hi-si té-me šá AD-ia lu-us-me “the Satammu is going off to Babylon. Before he goes back22, let me hear news from ‘my father’”, CT 22 182: 16-18 (letter, pre-526, B) }\]

19 Collations by Wunsch (1993, §211).

20 See the discussion in Chapter 3 §2 and §3 for examples. For the presence or absence of the -t- infix in the subordinated verb see IV §1, below.

21 The unusual spelling of the variant la’i can not be explained. Further examples are in GINBr pl11. It is not in Kuyunjik NB (although an even greater variety of endings is noted for agá, cf. Woodington 43-44 and my V §5 k iii, below). The negating particle la is always spelled la in spite of the influence of Aramaic (wait). See I §5, above.

22 For inahhis(u).
KÜ.BABBAR a-na ša-a-šú u PN id-din-nu a-na [/*bab?]23 ba-nu-ú lid-din-nu-² kap-da in-na-šú-² (sic) a-di la-² *bab!-ba-nu-ú iqq-qi-it “the money (Sir) gave to him and PN may he give it at the good exchange rate. Give it to him quickly before the good rate becomes more expensive”, CT 22 148: 11-18 (letter, 545-527, B)

Note that when used in an oath, the la is omitted:

ki-i a-dan-nu i-te-et-qa a-di ANŠE ni-ib-ba-ká-ma ni-nam-di-nu “(woe betide us) if the deadline passes before we bring and give the donkey”, TCL 13 165: 10-11 (Camb yr 4, U)

c) arku “after”:

ò ár-ku LÛ-tu šu-a-tú ul-tu É PN a-na É LÛ-par-sa-a-a šá É PN, na-ad-nu uš-ta-his-su “and after that servant had been given from PN’s house to the Persian’s house which belonged to PN, (the original owner) withdrew him”, VS 4 87/88: 4-7 (Dar yr 1, B)

d) asar “where; wherever, to whoever”:

[u IM?].DUB.MEŠ u rik-su.MEŠ a-šar in-nam-ma-ru šá NIG.GA é-a-n-na šú-nu “(any) tablets and contracts, wherever they may be noticed, belong to Eanna”, AnOr 8 70: 23 (Camb yr 3, U). A standard phrase also used in Babylon:

GABA.RI ú-il-ti a-šar ta-nam-ma-ri šá PN...ši-i “(any) copy of the IOU, wherever it may be noticed, belongs to PN” OECT 10 105: 11...13 (Nbn yr 9, B)

GIŠ.BAN a-šar se-ba-tu-ni in-na-² “give the fiefdom to whoever you (mpl) want”, TCL 13 182: 9 (Dar yr 2, U)

e) ašša, aššu “as soon as”:

iq-bu-nu aš-šá it-tar-da-a-nu 1+et ina lib-bi-ši-na a-na FDN...ta-an-na-an-din “they said ‘as soon as they come down one of them is to be given to the Lady-of-Uruk...’”, YOS 6 71: 22...23 (Nbn yr 6, U)

aš-šú at-ta u PN ina šu-lum ta-at-ta-al-ka-nu ŠE.BAR ma-dat “as soon as you and PN went away in peace, the barley (growth) has become great”, YOS 3 22: 6-8 (letter, early Nbn, U)

f) ki “that; when; as,while”

i) ki “that” is used mainly in assertory oaths, with idû (§4 b, below),24 where the sense is an assumed protasis of a conditional sentence. There is only one example of idû ki outside of this:

---

23 This sign has defeated all who have collated this text, including myself. In both cases the scribe appears to have written BA and put a diagonal stroke across it. I can only assume the scribe realised he should have written BAB, but instead of completely erasing BA, used its bottom horizontal as part of BAB. Streck has interpreted iqqir as the preterite of nakaru, i.e. ikkîr, but such an interpretation is surprising, because, in §27a, p!42 he himself states that it is rare for adî la to use iprûs. Then he gives two examples to prove his point; the first is actually a 3fpl N present, iṣṣab-tā; the second is the one given above. The combination of babbanû + aqûru has already been suggested by Von Soden (AHw p1400b).

24 See also the Note at the end of this section.
ul ¼û dékî i lib-bu-û a-ga-a ta-ku-uš-ša-û ina lib-bi ki-i LÜ.A.KIN-ia la?û ta'am- ma-šra1 “I did not know that you were thus delayed. That is why you did not see my messenger”, YOS 3 22: 24–27 (letter, early Nbn, U)

In Kuyunjik NB ķ1 was more commonly used not only with idû but also amårû, šapårû and šemû.25 The reason for its gradual demise may be its increasing replacement by ša.

ii) ķ1 “when” is used to indicate past and future actions.26 The word order in sentences using ķ1 is virtually always:

[subordinate clause ending with ķ1 + verb] - main clause

The main verb, as the consequence of the subordinated action, is infixed with a -t-.27

ni-i-niû PN...2 UZ.TUR.MUŠEN.ME NIG.GA FDN...ki-i ni-du-ku ina ti-du łni-1 iš-te-bir “ourselves and PN, having killed the two ducks which were the property of Innin-of-Uruk..., we buried them in mud”, Iraq 13: 10–13 (Camb yr 2, U)

DINGIR.MEŠ ki-i u-šal-lu-û še-bu-ta-a ak-ta-šad “when I pray to the gods I achieve my wish”, CT 22 194: 7–9 (letter, end Nbn? B)

PN...kak-kab-ta-ki-i iš-mi-tan-1-niû a-na FDN uz-zak-kan-ru “having marked me with a star, PN consecrated me to the Lady-of-Uruk”, YOS 7 66: 2–3 (Cyr yr 7, U)

PN...iz-qat AN.BAR.MEŠ ki-i id-du-û un-da-šir “having put him in chains, PN then lekĜ", YOS 7 7: 125–126 (Cyr yr 1, U)

The subject comes after the object in the following variation on the hendiadys construction (II §1 a iv, above):

KÜ.BABBAR a'3 MA.NA ina a-dan-ni-ša PN a-na PN, it-ta-dîn ú-il-tî1 u LÜ1-tû PN, ki-i u-tir-ri a-na PN it-ta-dîn “PN has given the (aforementioned) three minas of silver to PN, within the deadline and PN, has given the IOU and the slave back to PN”, Dar 319: 9–13 (yr 12, B)28

ú-il-tî... PN,... ki-i ú-ter-ru-2 a-na PN, it-ta-ad-dîn1.129 “PN,..., when they return the IOU, they are to give it to PN,”, Dar 447: 10 (yr 17, B)

It is possible for more than one subordinating conjunction to precede the main verb. This is confined to the Uruk texts. In the first example, note how easily the subject of the two subordinated clauses changes, and in the third example there is a change in subject in the main clause:

25 See Dietrich (1968)XXX p76 and examples on p91f.
26 For ķ1 in conditional sentences see §3, below.
27 This occurs almost without exception in such circumstances, as Streck (1995, §34 p155) shows. However, he calls it a “Vergangenheitsperfekt” and not the consequential -t- form.
28 The deadline referred to was Nisannu 20 and this document was written on Nisannu 22.
29 it-ta-ad-dîn1 (dîn = danu) for ittadnû ? i.e. a G for Kadishu of nadûnu. This sentence can be construed as a kind of hendiadys. For further examples see ķ1 in hendiadys constructions.
PN...ki-i id-di-nu-uš ṭe-er-du ina muh-hi ki-i iš-šak-nu RN iš-mu-ú ik-te-iiš “when PN gave (the kusītu garment), in the repercussions that ensued,30 Nbk heard and retained it”, YOS 6 71: 29–31 (Nbn yr 6, U)

ina mu-ši ni-ik-su a-na Ė PN...ki-i ni-ik-ki-su ki-i ni-ru-bu (several objects) ki-i ni-tš!-šu-ú a-na PN, AD šá PN,...šá it-ti-ni ni-ib-la-ki-it “in the night, when we made the break-in into PN’s house and had got in,(and) having taken (several objects), we went over31 to PN, the father of PN, who was with us”, AnOr 8 27: 7...14 (Nbn yr 12, U)

1PN ’kur-ban-ni ki-i ta-las?-suk? kal-bi ki-i tam-mah-ša-šu qa-ab-ba-dš-šu um-ma mi-nam-ša kal-bi ša-lam-mah-ša-ši-‘ “when PN tore up a clod and kept hitting the dog we asked her,’why are you hitting the dog?’”, YOS 7 107: 7–8 (Camb yr 1, U)

iii) kī in circumstantial clauses “as, while”. The last-cited example also has two clauses subordinated to the verb, a historic present, and therefore has no -t- infix. kī tamahhaš is also a historic present, but is also similar to a circumstantial clause subordinated to tassuk.

The subordinated clause describes an action or situation which is simultaneous to the action of the main verb and its verb therefore has no -t- infix:

ki-i it-ba- y i-qab-ba-* um-ma... “he got up, saying...” (literally, “as/while he got up, he was saying”), YOS 7 78: 6–7 (Cyr yr 8, U)

The same effect is achieved by using a passive stative:

ZUL.UM.MA ki-i ú-kal-lim-an-ni a-hi nu-ku-su-nu a-hi ša it-bu-ku “the dates, when he showed them to me, some were cut (and) some they (impersonal subject) had piled up”, CT 22 78: 8–10 (letter, 545–527, B) (Note again the different subjects in each clause, “he, the dates, they”.)

g) libbu, in ina libbi ša “because”. ina libbi is a prepositional phrase which, when followed by ša, functions as a subordinating conjunction:

ina lib-bi ša AD-ú-nu at-ta a-na EN-ša ša-š-pu-ru “because you are our father I wrote/must write to you (literally, “my lord”)”, CT 22 183: 23–25 (letter, 1MB, B)

h) libbū,32 in libbū ša. This prepositional phrase also functions as a subordinating conjunction, “because of (this), regarding, on the basis of”, and nuances thereof (to which English does not lend itself well):

ù gi-mir lib-bu-ú ša ina pa-ni RN u RN, ša qé-me u ŠE.BAR a-na GN iz-bi-lu-‘ a-mur...lib-bu-šu SUK.HI.A šu-bi-la-a-ni “and on the basis of what they (impersonal subject) sent to GN as regards flour and barley, at the time of Nrgl

30 The meaning of terdu šakānu is unclear. AHw p1388b gives terdu as “Vertreibung” in MB texts but queries the “SpB” usage as an Aramaism, “Aufstörrung, Nachprüfungsaktion”, cf.: te-er-da ki-i iš-kun YOS 7 97: 9, 17–18 (Camb acc, U).

31 Cf. GAG paradigm 39 ibbalkit (pret). A -t- form is expected.

32 The final long vowel is represented in CAD and AHw as libbū and libbū respectively.
and Nbn, look (i.e. 2sg for 2pl) at all of it...(and) in accordance, send me provisions", YOS 3 81: 27...33 (letter, Cyr–Camb, U)

i) Compounds involving muhhu:

i’) adi muhhi ša “until” is found in the Uruk texts:

a-bu-uk a-na PN i-din-šá a-<<na>>-di UGU šá a-ha-meš nim-ma-ru-mar EŠ.BAR-
šá it-ti PN ni-šá-ka-nu “take her and give her to PN until we see one another in
order to make a decision with PN regarding her”, AnOr 8 56:15–16 (Cyr yr 7, U)

dul-lu...li-pu-šá a-di UGU šá te-e-me...ta-šem-ma-a, “let them do the work...until
you hear instructions”, YOS 7 70: 12...13 (Cyr yr 8, U)

a-di UGU šá a-na UNUG KI er-ru-bu(sic)-am-ma “until I come into Uruk”, YOS
3 83: 20–21 (letter, end Cyrus? U)

a-di UGU šá at-tu-ú-nu hi-tu ta-ah-ta-at-ta-’ a-na-ku hitu ul a-ha-t-tu “until you
make mistakes I won’t make mistakes”, YOS 3 17: 36/37 /TCL 9 129: 34 36
(letters, early Camb? U)

The Uruk letter YOS 3 66 twice uses ana where adi might have been expected, in
line 3: a-na muh-hi u,-mu a, “up to this day”, and in:

a-na muh-hi u,-mu a, GIS.MA šá ZI.DA ul ú-še-ri-iq É ZI.DA qa-ti i-qab-bu-ú-nu
um-ma a-na muh-hi šá ZU.MA-gu-šu il-la-kám-ma É ZI.DA i-her-ri mam-ma
ZI.DA a-na lib-bi ul i-de-ek ki “up to this day the flour boat has not been
emptied. The flour house is finished. They say until (?) the magus comes and
checks the flour house (? 33 ), no one is to move the flour into it”, : 8–9 (letter,
Camb pre-526? U)

ii’) ultu muhhi ša. Also a prepositional phrase, “after, since”:

ul-tu muh-hi šá IM.DUB...ik-nu-uk ih-li-iq-ma “after he signed the tablet he ran
away...”, Nbn 697: 5–6 (Nbn yr 13, B)

ul-tu UGU šá a-na-ku paq-da-ak-ka... “since I was installed (as šatammu)...”,
TCL 13 170: 10 (Camb yr 5, U)

j) pānāt in ina pānāt ša “before”:

ina pa-na-at šá tul-la-du “before she gave birth”, YOS 6 224: 23 (Nbn yr 15, U)

ina pa-na-at šá a-na KU.BABBAR a-na PN ta-na-an-di-nu “before she was sold
to PN for silver...”, YOS 6 79: 13 (Nbn yr 5, U)

k) ša “that”

The use of ša in compounds such as adi muhhi ša, libbū ša and ina pānāt ša is
widespread in NB.34 ša can also be used without a preceding substantive with the
verbs idū, amāru, qabū and šemū, to mean “that”, cf. German “dass”, a usage

33 Although the verb looks like herū (“to dig”), it makes more sense if it is interpreted as harū
“to examine”. Discussed in VI §2 below.
34 See CAD Š/I, entry b on page 1.
already found in Kuyunjik NB. Additional uses are noted in the NB under scrutiny here (ii, below).

i) ša with idû, amaru, and šemû:

```
a-na-ku i-de ša ŠE.BAR u ZŪ.LUM.MA ina ē-an-na is-la-nul “I do know that there are no barley and dates in Eanna”, YOS 3 69: 12–14 (letter, 539–526, U) cf. YOS 3 81: 7 (at-tu-nu ti-da-a, šâ...) and YOS 3 113: 24 (EN.ME-e-a lu-ū i-du-1-ā šâ...).36
```

```
at-ta 4EN i-mu-ru ša lu ma-a-du sa-ma-ak-ka “you, Sir, must see that I am greatly harrassed”, YOS 3 8: 11–12 (letter, early Dar? U). See also YOS 3 52: 6–8.
```

```
šâ 1 ŠILA ZŪ.LUM.MA a-na 1 GIN KŪ.BABBAR ina UNUG KI iq-ta-bu-na-a-šâ “they tell us that one qû of dates is one shekel of silver in Uruk”, YOS 3 79: 22–24 (letter, 539–526, U)
```

```
na-qu-ta-a la ta-re-šâ-2 šâ tê-ma-a la ta-šâ-ma-2 “don’t have (2fs) any fears about me that you haven’t heard any news about me”, CT 22 6: 7–8 (letter, Cyr? B) 37
```

ii) qabû and kunnu. qabû + ša is used in CT 22 73 in reported speech. See §4 a, below. The examples of kunnu (with -t- infix) are all from Uruk and involve the giving of evidence in the future:

```
i-na u-mu LŪ.mu-kin-nu a-na PN... uk-tin-nu ša ŠE.BAR ša FDN a-na KŪ. BABBAR id-di-nu mim-ma ma-la LŪ.mu-kin-ni ū-ka-nu-uš 1+en 30 a-na FDN i-nam-dia “on the day that a witness or a denouncer comes and convicts PN...that he sold barley belonging to the Lady-of-Uruk,... whatever amount that the witness convicts him of he is to give thirty-fold to the Lady-of-Uruk”, YOS 7 24: 1–8 (Cyr yr 3, U), cf. TCL 12 106: 1...12 (Nbn yr 12) and YOS 6 175: 1–3, YOS 6 179: 1–3 (all Nbn)
```

One example uses the substantive rather than the verb:

```
LŪ .mu-kin-nu-tu ša PN...šâ ... (6 people)...ina É PN... PN ū-šê-ri-bu-ma u-šâ-ah-mi-î “this is the evidence of PN that ...(6 people)... made PN go into and ransack PN’s... house”, YOS 6 108: 1...7 (Nbn yr 8)
```

According to the examples in CAD (kânu) the use of kunnu with ša appears only after NB (ABL). Sometimes no subordinating conjunction is used:

```
in a u-mu LŪ.mu-kin-nu lu-u LŪ.ba-ši-iq PN...uk-tin-nu lu-ū KŪ.BABBAR lu-ū KŪ.GI ina ŠU.II PN, ū PN,...im-hu-ru... “on the day that either a witness or an informer accuses PN of receiving either silver or gold from either PN or PN,...”, YOS 6 191: 1...5 (Nbn yr 12), cf. YOS 6 214 1–5, YOS 6 193: 1–3 (both, Nbn)
```

As stated in the entry on ki (f i, above), the increasing use of ša rather than ki in the above contexts is probably due to the influence of Aramaic.

---

35 See Dietrich (1968) XLII p79 and 95, Woodington p164. Woodington calls ša, mala and ašar “relative subordinators”. Her example on p290, using ḫe ša in ABL 327: 5–6, is not included in the references on p164.

36 idû without a subordinating conjunction is also used in verbless clauses. See Note at the end of §2c.

37 See negation, 1 §5, above, for more on this sentence.
1) um and compounds thereof, "when, as soon as". The verb seems to be present or preterite. umu on its own is often used in conditional sentences (§3, below):

i) um:

\[ u_{-}mu \, \ddot{s}i-pi-r-ta-a \, ta-\ddot{a}-\ddot{m}-\ddot{m}ar \, nu-ba-tu, \, la \, ta-ba-a-ta \, \text{"as soon as you see my letter do not stay the night"}, \text{YOS 3 33: 11–13 (letter, early Cyr, U)} \text{cf. YOS 3 21: 10–11 and:} \]

\[ u_{-}mu \, \ddot{s}i-pi-r-ta-a \, EN.ME\ddot{S} \, i-mu-ur-\ddot{p} \, nu-ba-tu, \, PN \, \ddot{u} \, LU.GAL-u-ti.ME\ddot{S} \ldots \, la \, \text{\texttt{i\,b\,i\,i\,t\,u-\ddot{p}}} \, \text{\"as soon as Sirs see my letter may PN and the top men not stay the night\"}, \text{ibid.: 10–14} \]

ii) um sa:

\[ u_{-}mu \, \ddot{s}a \, us-su-nu \, ina \, \ddot{s}i-pi-r-tu, \, EN.ME\ddot{S} \, li\ddot{s}-\texttt{pur\,u-nu} \, \text{\"as soon as they come out may Sirs write by means of a letter"}, \text{YOS 3 21: 16–18 (letter, Cyr-Camb, U)} \]

\[ u_{-}mu \, \ddot{s}a \, PN \ldots u \, PN_{n} \ldots a-na \, GN \, \texttt{e\,r\,u\,b\,u} \ldots \, \text{\"when PN...and PN...get into Babylon...\"}, \text{TCL 13 222: 1...3 (around Dar yr 1, U)} \]

iii) ultu um sa:

\[ ul-tu \, u_{-}mu \, \ddot{s}a \, ki-i-ri \, i-nap-pa-hu \, i-di-su \, a-na \, muh-hi \ldots \, \text{\"as soon as he lights up the furnace he is to count up his earnings from PN...\"}, \text{VS 6 84: 16–17 Nbn yr 12, B) \]

Note: Subordinated verbless clauses do not have to be introduced with a subordinating conjunction. The examples all use idû:

\[ lu-\dot{u} \, ti-i-du \, MN \, a-ga-a \, \ddot{s}a \, MU \, 15.K\ddot{A}M \, IT\ddot{I}! \, di-ir-ri \, \text{\"you do know that this Addaru for year 15 is an intercalated month"}, \text{YOS 3 115: 6–9 (royal letter, Nbn yr 15, U)} \]

\[ lu-\dot{u} \, ti-i-de \, dul-lu \, ina \, UGU-ia \, da-a-nu \, \text{\"you must know that the work is (too) hard for me"}, \text{YOS 3 33: 4–5 (letter, early Cyr, U)} \]

\[ lu-\dot{u} \, ti-i-de \, dib-bi \, lu \, ma-a-du \, a-kan-na \, ina \, UGU-i-ni \, bi-\texttt{s}u \ldots \, \text{\"you do know that the talk against us here is very bad\"}, \text{YOS 3 19: 20–21 (letter, early Cyrus, U)\textsuperscript{42}} \]

\[ \text{\textsuperscript{38} Literal translation of } nubattu+ bâttu, \text{which probably has a more idiomatic sense, something like \"do not stay a moment longer\", or \"act immediately\".} \]

\[ \text{\textsuperscript{39} For the one example of um mala sa (YOS 7 66: 17–18) see III §1 b iii, above.} \]

\[ \text{\textsuperscript{40} In fact it is not possible to judge whether the clause following the clause with idû is subordinated; both could be main main clauses in paratactic juxtaposition. An example with a msg final weak predicative adjective needs to be found.} \]

\[ \text{\textsuperscript{41} Text has UD.} \]

\[ \text{\textsuperscript{42} dibbi is plural. The odd word order and choice of ba\'âšu rather than bašû is discussed in part II §3 c ii, above.} \]

---

112
Conditional sentences

In NB, the introductory subordinating conjunction in conditional sentences is usually *ki*. The reasons for its having taken over from *summa* are not clear. However, the following nuances of *ki* as a subordinating conjunction, when taken en masse, make it possible to see how it could evolve into a conditional particle:

i) *ki* = “after, when, while”.

ii) *ki* = “that”, cf. German “dass”.

iii) AHw p469b gives an Amarna letter as an example of *šaʾālu...ki* “to ask if...” (*šaʾal ki-i mātu rūqatu “ask if the land is far”, VAB 2 7: 24).

iv) *ki... (ū) ki* “either...or”.

Unreal conditions either do not occur in the texts under analysis or, if they do, no distinction is made between them and real conditions.

a) *ki* (spelled *ki-i*)

In these texts the verb in the protasis is most often G (i.e. *iptaras* with a future perfect idea) and that in the apodosis is present-future. Sometimes the verb in the apodosis is a precative and occasionally either clause may use a verbal adjective. If either the protasis or apodosis consists of more than one branch, identity of tenses is maintained and the sections are linked with *ū* or *-ma* but *ki* is not repeated before each section. *la + iptaras* is used for negation in the protasis, as seen below:

\[
\text{ki-i ŠE NUMUN pa-ni PN in-da-har KILLAM ip-pu-uš ki-i ŠE NUMUN pa-ni PN la in-da-har ū-il-ti PN ū-targ(=GUR)-ma a-na PN i-nam-din “if the arable land}
\]

43 It is not from Aramaic. The Aramaic for “if” is *ḥen*.
44 Diëtrich (1968, XXXVI, p74 and 88f).
45 §2 f i, above. Diëtrich’s examples, from ABL (NB) use the verbs *amāru, idū, šapāru* and *šemū* (ibid., XXX, p76 and 92).
46 Dietrich (ibid., XXXI, p76 and 92).
47 II §1b v, above.
48 I.e. hypothetical, cf. those conditions using the irrealis particle *-man* in literary texts. See GAG §162. *-man* is not used in NB.
49 English translates this with a present. Streck (§36a, p161f) calls it “Vorzeitigkeit in der Zukunft”, Dietrich (1968, XXXVII, p74), “futurum exactum”.
50 This is in contrast with *ki* used as a subordinating conjunction (q.v.), where the subordinated clause with *ki* is often not infixed with *-t* but where the main clause always is.
51 The one exception: *ki-i qa it-nu-ma la it-tan-nu... “if he does not swear and does not give (it)...”, Dar 434: 10 (yr 16, B), may be perhaps explained by the assumption of the *t* in *tami* as an infix, as was originally the case.
pleases PN he may buy it. If the arable land does not please him PN, may give the IOU back to PN”, VS 5 20: 15–19 (Nbn yr 1, B)

ki-i 1PN PN tu-un <da š> šir a na a šar-sá-nam ma tat-tal-ku...ŠE.BAR PN, a-na PN i-nam-din “if 1PN leaves PN and goes somewhere else, PN, is to give PN a monthly grain (allowance)”, YOS 6 163: 10...14 (Nbn yr 11, U)

ki-i KU,HI A ina su-us-su-ul-lu in-da-tuʿ ú Ú KU,HI A bi-i-šá ina man-zal-ti-šá-nu uq-tar-ti bi hi-tu šá DINGIR ú LUGAL i-šad-da-du “if the fish in the tub are inferior or (if) they offer bad fish during their service, they bear the punishment of god or king”, YOS 7 90: 14–16 (Cyr yr 5, U)

ki-i a-di UD 10.KÁM šá MN PN la it-tal-kám-ma a-na muh-hi ú-il-ti...1it-ti1 PN, la id-dab-bu 1+et GIS.NA...PN a-na PN, li-nam1-din-ma 13 <GIN KU.

BABBAR> PN, 1a-na PN i-nam-din “if, by Duzu 10th, PN does not come and discuss the IOU with PN, PN is to give one bed... to PN, and PN, is to give 13 <shekels of silver> to PN”, Dar 189: 9...18 (yr 5, B)

Verbal adjectives may be used in the protasis or apodosis:

ki-i pa-ni EN-ia ma1-hír a-na É lu-uš-pur-ma... “if Sir is agreeable let me write to the house...”, YOS 3 83: 13–15 (letter, end Cyrus, U), cf. YOS 7 102: 16–17

ki-i ina UGU dul-lu ú-ša-už-zu-š LÜ.ERIN.MEŠ-šá-nu ul i-hal-li-iq-š “if they remain at work their workteam will not desert”, YOS 3 17: 7–8 (letter, 533–526, U)

ki-i ma-as-sar-ti la-pa-ni ANŠE.EDIN.NA u ša-bi-ti la it-ta-šar pu-ut mi-ti-ti šá ina GARIN ANŠE.EDIN.NA i-šak-ka-nu na ša-ú “if he does not keep watch against wild asses and gazelles, he is to be responsible for any damage that the wild asses may cause in the wetland”, YOS 7 156: 19–21 (Camb yr 3, U)

Note: Assertory oaths (§4 b, below) are expressed using a protasis with kī but with the apodosis remaining unexpressed.

b) ūm, ūm ša

Conditions can also be expressed using ūm and compounds thereof as the introductory particle, cf. English “the day...”. However, ūm is more precise than kī in that it refers to some point in the future (albeit unspecified) and may be better translated “if at some point...” As in the case of the examples using ūm and compounds as a subordinating conjunction (“when, as soon as”) the verb in the protasis again tends to be infixed with a -t-:

u-<nu ša PN a-na UGU LÜ.u-ra-šá i-šá-p-par-ru ú LÜ.u-ra-šá la it-tan-nu hi-tu šá PN...i-šad-da-ad “if at some point PN writes regarding a stand-in and he doesn’t give him a stand-in he will bear the punishment of Gobryas...”, TCL 13 150: 4...8 (Camb yr 2, U), cf.

ina u-<nu LÜ.mu-šin-nu uk-te-nu-š 1+en 30 a-na FDN i-nam-di-in hi-tu šá LUGAL i-šad-da-dad “if at some point a witness convicts him he is to pay thirtyfold to the Lady-of-Uruk. He will bear the punishment of the king”, Weisberg 2: 8–10

52 tāru in hendiadys with nadānu.
u₄-mu PN a-na šim-tu, it-tal-kum-a är-ki-šá DUMU ši-it lib-bi šá PN₂ DUMU-šá it-ta₄-la-du GIS.SUB.BA.MEŠ ù NIG.SID.MEŠ šá PN AD-šá i-leq-qé “if some point PN passes away and (if) a true son of PN₂ has been born⁵⁵ after his death, he may take the prebends and assets of PN his father”, CTMMA 2.34+Nbn 380: 16–19 (yr 9, B), which continues:

ki-i DUMU ši-it lib-bi šá PN₁ la it-ta₄-la-du PN₁ <PN₁> ŠEŠ-šá ū EN H.A.LA-šá a-na DUMU-ú-tu i-leq-qé-e-ma GIS.SUB.BA.MEŠ ù NIG.SID.MEŠ šá PN AD-šá pa-ni-šá id-da-gal “if a true son of PN₁ is not born, PN₁ may adopt <PN₁>⁵⁵ his brother and partner and the prebends and assets of PN, his father will belong⁵⁶ to him”, ibid.: 19–23.

Also for comparison are:

ina u₄-mu PN a-na a-šar-šá-nam-ma it-tal-ku “if PN goes somewhere else...”

Camb 379: 12–13 (yr 7, B)

ki-i a-na-šar-šá-nam-ma it-tal-ku VS 4 60: 11–12 “if he goes somewhere⁵⁷ else...” (Cyr yr 3, B)

The speaker’s choice between ūmu or ki or mātim (below) seems to be based on his own assessment of the likelihood of the situation.⁵⁸ The more likely (in his opinion) that the situation is to happen he will use ūmu. If it is less likely, he will use ki. mātim appears to be used if the situation is highly unlikely.

c) mātim is also used to express a possible (but unlikely) future condition, “if ever”. It is found in the following standard phrase seen in Babylon Achaemenid texts:

ma-ti-ma i-na ŠEŠ.MEŠ DUMU.MEŠ ki-im-ti nē-su-tu u sa-la-tu₄ šá DUMU PN i-rag-ilu₄-mu...⁵⁹ pa-qer-a-ni KÜ.BABBAR im-hu-ru a-d₄ 12.TA.ÂM i-ta-nap-pal “if ever any of the kith and kin (literally, “brothers, sons, distant kin and

---

⁵³ I.e. N with infixed -t- and dissimilation from ittammar.
⁵⁴ N with -t- infix. See GAG §103y and paradigm 25 especially p31* n30.
⁵⁵ Because it is unusual for a person not to be mentioned by name in economic documents, it is possible that the repetition of PN’s name here may be a mistake or that the name of his brother and partner was omitted.
⁵⁶ Read idaggal. The id-da(g)- spelling is common for this verb in the present-future.
⁵⁷ With ana asar elided to a-na-šar.
⁵⁸ I.e. the epistemic modality intended by the speaker. See Black, (1995) p16f, especially n5 and n8, where he says, “In English what distinguishes ‘if he comes tomorrow’ from ‘when he comes tomorrow’ is in fact an epistemic distinction of the degree of the speaker’s confidence in the likelihood of the utterance.” This may also help one to consider that ki = “if” (in the future) was a development from ki = “when” (in the past).
⁵⁹ This condition is common in supēltu tablets and the proposed complaint is usually phrased, as in this case: um-ma É šu-a-ti ul na-din-ma KÜ.BABBAR ul ma-hi-ir “thus: ‘that house was not given and the silver was not received’” (line 37).
family") of the PN clan complain..., the claimant is to repay twelvefold the money he received", VS 5 38: 35...39 (Cyr yr 6, B). For further examples see TCL 13 190: 22–25, Dar 26: 25–29, Dalley 75: 27–32, and Dar 227: 25–29.

d) Conditions expressed without a conditional particle. In earlier dialects (MA and earlier, see GAG §160e) conditions are generated when two main clauses are paratactically juxtaposed (sometimes with connecting -ma, GAG §160a), cf. English "you scratch my back, (and) I'll scratch yours". This cannot be observed in the texts here, apart from the example from AnOr 8 79 below. Negation in the apodoses of conditional sentences provides the only evidence of the use of īlā + infixed -r-, 60 but the example in AnOr 8 79 indicates that negated preterites can express a conditional situation without the use of a conditional particle. If a conditional sentence has been expressed using ul + preterite for the perfect ("futurum exactum") it is therefore not easy to identify. Consequently it is possible that many more like the following example61 exist but remain undetected:

ina ITI.DU, MU 7.KAM PN PN, ul i-bu-kām-ma a-na PN, ul id-din 1 MA.NA KU.BABBAR a-na FDN i-nam-din ‘(if) PN has not brought PN in Taššitu of year 7 and given him to PN, PN is to give one mina of silver to the Lady-of-Uruk’. AnOr 8 79: 9–12 (Camb yr 7, U)

§4 The reporting of speech and oaths, using subordinating conjunctions

a) Indirect speech

Almost all speech is reported exactly as it is spoken and is therefore dealt with in the section on speech and questions in I §6 a, above. However, the letter CT 22 73 has a clear example of indirect speech as well as direct speech:

a-na PN, PN, u PN, a-qab-bi-ma šá ṢE.BAR šá ina IGI-šú ul ib-ba-ku-nim-ma ul i-nam-din-nu-nu... "I'm telling PN, PN, and PN, that the barley that they (text: "he") have in their charge they are not bringing it and giving it to me", 6–9 (early Dar, B)62

60 See I §5b, above (negation) for the use of ul + preterite where a -t- infix is expected.
61 The use of inamdin and the fact that the document is dated Simānu 30th of year 7, four months prior to the deadline, makes it recognisable as a condition.
62 Which continues with: en-na ši-pir-tu, a-na UGU EN liš pu-ra-šā šu-nu-tu um-ma it-ta-hu PN iš-zi-za-ma šá mam-ma šá ṢE.BAR ina IGI-šú ab-ka-nim-ma a-na PN in-ná-... "Now, may Sir send them a letter about (it), saying, 'stand by PN and that anyone who has barley bring it and give it to PN’", 9–14. It is interesting to see how the speaker changes to the third person with šá mam-ma...ina IGI-šú. This is exactly what happens in English too.
As noted above (§2 k), ša seems to be a calque on Aramaic ɗît, best translated by English, “that”. Examples in OB and an SB example from Aššurbanipal of direct speech introduced by ša are given in GAG §155c.

b, c) Oaths

As with statements introduced by umma, oaths are reported exactly as spoken. There are two types of oath, the assertory (b, below) and the promissory (c, below).

b) In assertory oaths the meaning of what the person swears appears to be the opposite of what is written. This, as in the earlier Akkadian dialects, is because the oath is actually the protasis of an elliptical conditional sentence. The apodosis is either unexpressed, or, in the case of the examples in i 1, the god named is the subject of an apodosis which is otherwise unexpressed. In English, oaths may also be represented as a conditional sentence but the apodosis can rarely be omitted and is usually something like “woe betide me if...”; “strike me dead if...”; “swear to die if...” etc. Some of my translations are amended thus for ease of comprehension. Note also that the verb of denial is usually prefixed with -i- but that the verb of confirmation is always la + preterite. This is in contrast to ordinary conditional sentences, which give the only instance in which la and the -t- inflex are allowed (after ki).

i) Assertory oaths in letters

1) The deity is invoked by name, followed by ki and direct speech:

\[ \text{4UTU ki-i la ITI 5 MA.NA KÙ BABBAR ŠUK.HIL.A-su-nu 4UTU ki-i mim-ma gab-bi la û-qa-at-tu-û “Šamaš (strike me dead) if their rations aren’t five minas of silver per month, Šamaš (strike me dead) if they haven’t (already) finished everything off!”}, \ YOS 3 21: 29-32 (letter, Cyr-Camb, U)

\[ \text{4NÀ ki-i 1 + em UDU NÎTA ka-lu-mu la a-na KÙ BABBAR a-bu-ku “Nabû (strike me dead) if I took a single yearling sheep away (which was) not for silver (i.e. “unless it was paid for”)}, \ Peak 22: 15-17 (letter, Dar, B)

In TCL 9 132: 12-16, no deity is invoked:

\[ \text{ina lib-bi šā 1-šū 2-šū a-na muh-hi a-na EN-fa aq-bu-û ki-i a-na DUMU.LUGAL a-na muh-hi la šē-pu-rû “having spoken to my Lord once or twice about it, (woe betide me) if I haven’t written to the crown prince about it”} \ (letter, Nbn yr 1-12, U)

63 Cf. I §6 a, above.
64 See conditional sentences, §3 above. Note that conditional sentences in Akkadian are normally in the order protasis + apodosis. Assertory oaths are an exception to this.
65 An instance when the apodosis is omitted is in “if I haven’t told you a hundred times...”.
66 But not always, as seen in the extracts from Peak 22 (i 1, below), TCL 13 132 and TCL 170 (ii, below).
2) The phrase DN lū īde kī, DN u DN; lū īdū kī, etc., followed by direct speech, may be used, and the speaker’s intention is again the opposite of what is recorded. The implication for the swearer is that the god knows that destruction or punishment will follow if he is not telling the truth. It is also possible that lū īde kī is a precative or asseverative, “may DN know, if...; DN does/must know that, if...”.

\[\text{67} EN NÁ lu-ú i-du-ú ki-i 2 GUR 2 PI BANLIMMU nu-ku-su “may Bēl and Nabû know that if 2 kur 2 pi 4 sītu were cut (I'm a dead man)”, CT 22 78: 11-12\]

\[\text{67} EN u NÁ lu-ú i-du-ú ki-i UDU.NÍTA ka-lu-mu la-pa-ni-ka ap-si-in û ku-tal-la ās-kun-nu “Bēl and Nabû must know that if I did hide a yearling sheep from you or put it aside (literally, “back”) (I'm a dead man)”, Peek 22: 6-10 (letter, Dar, B)\]

\[\text{67} UTDU lu-ú i-de ki-i u-mu PN i-kāš-šā-da a-na UGU mam-ma ma-la KUR.MEŠ aq-ta-ša-i ał-la ana UGU-ka Difficult. “Šamaš knows, if I've spoken to anyone in the whole word about it apart from you by the time Gobryas arrives, (I'm a dead man)”, YOS 3 106: 7-9 (letter, Cyr-Camb, U)\]

A further example is in YOS 3 8: 33-36 (U).

ii) For assertory oaths in legal documents, the oath is usually introduced with variants on the theme:

PN + \text{ina} + deity/deities + the king or the adē of the king + \text{tamû} or zakāru. Watanabe (1987, 21-23) cites all the NB oaths with adē introductions known to her. She also discusses the meaning of the term adē.70 From these it is evident that variations occur in how the elements in the written introduction to the spoken oath are connected.71 YOS 6 232 follows the pattern most often attested (fourth example, below). Sometimes the deities or the king are omitted:

\[\text{PN ina EN u NÁ a-de-e šā NÁ-I...it-te-me ki-i dul-lu šā PN u ŠEŠ.MEŠ-šū un-da-aš-ru “PN swore by Bēl and Nabû (and) on the oath of Nbn...'(woe betide me) if I were to abandon the job of PN and his brothers'”, VS 6 84: 19-21 (Nbn yr 12, B)\]

\[\text{67 For the difficulties in spelling and nuance of the precative and asseverative in these texts, see §4 b ii and c ii, above.} \]

\[\text{68 Ebeling includes the following (damaged) line in the oath but collation suggests line 13 is a new sentence: } \text{lmál-la ina lib-bi whose sense is then completed by [a]-mur in line 14.}\]

\[\text{69 The unusual word order continues: } (al-la ana UGU-ka) ša at-ta GISše-e ina pa-ni-ka ù SUK.HLA ti-du-ú”(apart from you) who have the ledger at your disposal and know about the rations”, (lines 9-10).\]

\[\text{70 pbf and p24. The difficulty in understanding the meaning of adē is also acknowledged in CAD. In adē B (p135b) it suggests that adē refers to a "supernatural manifestation of royal power" and that its invocation has the purpose of turning this adē against the person who breaks the oath that he makes. As seen in the discussion at the end of this section, I prefer the translation "loyalty oath" (cf. AHw, p14).}\]

\[\text{71 The main variations give by Watanabe are as follows: } \text{ina DN DN... a-de-e šā LUGAL... in her earlier examples (Nbk-Nbn, p21)} \]

\[\text{ina DN DN... u (ina) a-de-e šā LUGAL... in her later examples (p22). Note the rare a-di-i spelling given in three of her examples (Nbk-Camb).}\]

118
PN...ina 4EN 4NA u =Da-ri-muš it-te-me ki-i a-dan-nu ú-il-ti i-te-qu “PN swore by Bēl, Nabū and Darius, (woe betide me) if the deadline for the IOU “passes””, VS 4 107: 8–10 (Dar yr 16? B)

PN...ina 4EN 4NA ù =Da-a-ri-ia-mu-us...it-te-e-me ki-i [unreadable]72 šá ú-il-ti. ME šá PN DAM-a i-na É PN, ta-ap-qî-du mim-ma NÎG GA FDN lib-bi i-ba-dâš-êš-i ki-i ú-il-ti ME la at-tu-u-á i-is-ši-ñi “PN...swore by Bēl, Nabū and Darius... (woe betide me) if there is73 anything belonging to the Lady-of Uruk among the [copies?] of the IOUs which fPN my wife deposited in the house of PN... (Woe betide me) if the IOUs are (3pl pronoun copula) not mine”, TCL 13 181: 9...14 (Dar yr 2, U)

ina 4EN 4NA FDN u 4Na-na-a u a-de-e šá 4NA-I,...u =EN-LUGAL-URU DUMU-šá it-te-mu-á ki-i [74SE.NUMUN šá FDN GIŠ.BAN.MEŠ šá ina pa-ni LU.ENGAR. ME ù LU.er-re-še-e šá PN...u LU.ŠÂ.TAM it-ti LU.SITA., MEŠ šá é-an-na iš-pur-ru-na-a-ši ] “mim-ma a-na na-de-e le-e-ru, ina lib-bi ni-te-ép-sû IGLU ni-at-ta-ru ù le-e-ru, ni-it-ta-du-û” “they swore by Bēl, Nabū, the Lady-of Uruk, Nannâ and the oath of Nbn and Bēl-sar-usur his son, (‘regarding’) the arable land of the Lady-of Uruk, (i.e.) the farm-leases at the disposal of the farmers and growers whom PN...and the šatammu sent to us with the Eanna accountants, (woe betide us) if we have done anything to indicate slacking there, or shown inconsideration75 or been inattentive”, YOS 6 232: 19...24 (Nbn yr 15, U)

Difficult. “PN swore an oath of god and king, ‘I did not sell the aforementioned one sheep and one goat and no one else with PN...bought the aforementioned sheep and goat from me’”, TCL 13 132: 10–14 (Cyr yr 4, U)

Other oaths in this group: TCL 13 165: 10–11, TCL 13 167: 4–6, Weisberg 1: 22–2676 (all, Uruk).

Another variant on the theme is:

PN niš77 di + šālû or zakârû “PN swears on the life of a god” in the Uruk texts:

niš DINGIR.MEŠ ù LUGAL i-na UKKIN ta-az-ku-ur ki-i a-na-ku kak-kab-ti ù ar-ra-tu, ina muh-bi rit-ti šá PN...a a-mu-ru “she swore an oath of the gods and king in the assembly, ‘if I did not see a star or slave-mark on the hand of PN... (I’m a dead woman)’”, YOS 6 224: 19...24 (Nbn yr 15, U)

PN niš DINGIR u LUGAL iz-ku-ru ki-i se-e-nu a2...a-na KÜ.BABBAR ad-di-in ù mam-ma78 šà-nam-ma it-ti PN, KLLAM ina se-e-nu a2 it-ti-ia i-pu-šu Difficult. “PN swore an oath of god and king, ‘I did not sell the aforementioned one sheep and one goat and no one else with PN...bought the aforementioned sheep and goat from me’”, TCL 13 132: 10–14 (Cyr yr 4, U)

72 That this document was a copy of an earlier and damaged original is clear by the scribe’s hi-pi which he wrote each time he came to a broken area on the original tablet.
73 Difficult context notwithstanding, the subjunctive i-ba-dâš-êš-û should still be expected.
74 I have inserted the [] and “” in order to ease comprehension.
75 The virtually identical oath in AnOr 8 30: 15–19 has IGIJI ni-ta-da-ru. I am therefore assuming a derivation from adâru. According to AHw (p11b) išu + adâru appears to be an idiom, “to show consideration”.
76 The introduction to the oath is broken apart from i-na [... ] but context and Weisberg’s own interpretation of the missing part suggests it fits in this category.
77 The dictionaries suggest there is confusion in the reading of MU as nišu “life” or as šumu “name”. Since many of the texts quoted here use niš I am taking the sign MU as a reading for nišu in YOS 6 202: 2, 10.
78 mimma is obviously the wrong reading for this word but makes less sense here than mamma. According to Labat no. 554, MIM is mam in MB, NB and NA and mam in NA only. See also von Soden’s Syllabar, no.298 (p58). However, MAN (Labat no. 471)= mam in NB, therefore it is appropriate that mam should read mam in NB also.
The speaker is clearly expressing his denial in both cases, using preterites for the usual \(-t\)-forms throughout. This also happens in the following, which contains two oaths. The second one is lengthy and broken. The text deals with a storehouse doorkeeper (PN), who is making a false claim. His colleagues swear otherwise and he then confesses under oath:

\[
\text{niš DINGIR.MEŠ iz-ku-ur ki-i mim-ma ma-la b[a-šu-a?] } \quad \text{PN ul-tu É ka-re-e ina}
\]
\[
\text{muh-hi-[šu?] ú-še-šu-a ù mim-ma ina ŠU.II-šu ni-mu-ur } \quad [\text{PN,}] \quad \text{ina UKKIN niš DINGIR.MEŠ u LUGAL iz-ku-ur ki-i mim-ma } \Rightarrow [\text{PN}]
\]
\[
\text{ina muh-hi-ia ú-še-šu-ù ù mim-ma... (broken) } \quad \text{they(!) swore an oath of the gods, 'PN (the šatummu) issued nothing of whatever there was from the storehouse on his (PN's) account, and we didn’t see anything in his possession'... [PN] swore an oath of the gods and king (saying) that 'PN did not issue anything on my account and nothing...’},
\]

TCL 13 170: 19-21 (Camb yr 5, U)

The following refers to a oath to be made six days in the future:

\[
\text{UD 16.KÄM ša ITI APIN PN...MU DINGIR.MEŠ ina MUL KAK.SI.SÁ a-na PNR...ú PN-ú, ú-še-el-li ki-i ZULLUM.MA ša ÍDN ša ina pa-ni-ia aq-gab-ba-ku-nu-šu sù-pel-tu, ša ZULLUM.MA a-nam-dak-ku-nu-šu } \quad \text{Difficult.}
\]
\[
\text{"on the 16th of Aharasmna PN will swear an oath of the gods on the star Sirius to PN...and PN, ‘(regarding) the dates of the Lady-of-Uruk in my charge, (woe betide me) if I say to you ‘I'll give you barley in exchange for dates’"} 79 \quad \text{YOS 6 202: 2...9 (Nbn yr 16, U)}
\]

Sometimes it is difficult to make the oath fit the context:

\[
\text{UTU 1 i-del Jd-i ul-tu muh-hi šá tal-li-ka lu-ú } \quad \text{(ma-da) la as-mu-ú u } \quad \text{ILÜ.ERÎN.}
\]
\[
\text{MEŠ la i1-[ma-]tu-} \quad \text{"Šamaš must know (that) since you went, (woe betide me) if I have not had the greatest trouble and that there is a lack of workers", YOS 3 22: 8–12 (letter, early Nbn, U) 80}
\]

\[c) \text{Promissory oaths}\]

These oaths refer to future promises in legal documents and do not give the opposite meaning of what is stated. They are expressed with \(ki \text{ ad(i)/} ki \text{ adfa}\)\(^1\) followed by direct speech, with the verb in the present tense (without \(-t\)- infix).

\[
\text{PN...ina } \text{4EN } \text{4NÀ u RN...it-te-me ki-i a-di-ia (n date) } \text{1PN, šá ina IGI? <-ia?>1}
\]
\[
\text{ab-ba-kám-ma a-nam-dak-ka “PN swore by Bel, Nabû and Darius...on (n date) I I
\]

79 It appears that PN has dates, but not barley, since the text then says if he does swear he is to give a certain amount of dates (because he will therefore be telling the truth that he has no barley). If he doesn’t swear, this must mean that he is in a position to give barley (as opposed to dates), therefore he is to give barley. Coquerillat (Palm p80a) prefers to think PN has not been authorised to deal with the Lady-of-Uruk’s dates but is allowed to give barley.

80 The writer is complaining because he cannot cope with the excessive barley yield. My translation agrees with that in CAD: ‘Šamaš knows I have been very hard pressed since you left’ (samû 1b), but is the opposite of Coquerillat’s view (Palm p94 + n165). She understands this as an oath which is unexpressed (“sous-entendue”) on the basis that the writer would not want to report that things were going badly when in fact they are. I assume she makes this assumption because she would expect the writer (whom she identifies as an ineffectual man) to be happy if the barley is doing well, particularly as he then warns: mim-ma a-ki-i pi-i šá mam-ma la tal-la-ki “in no way, in spite of what anyone says, do you have to go (to check)”, ibid.: 19–21. (See \textit{mimma} emphasising negatives).

81 \text{ad in the Uruk texts. Von Soden transcribes it \textit{adi} in AHw p469b, in \textit{ki} C 2 b ċ; \textit{adi} and \textit{adfa} are in the Babylon texts only. See the discussion at the end of the section for a possible meaning for \(ki \text{ ad/kii adfa}.\)
shall bring PN, who is at my disposal? and give him to you”, Dar 339: 1–7 (yr 12, B)

PN...ina 4EN 4NĀ u RN...ana PN,...it-te-me ki-i a-di-i (n date) 1PN...ab-fba?*..kām?-ma?i-a-na PN, a-na-ad-din-nu “PN swore by Bēl, Nabû and Darius...to PN, 'on (n date) I shall bring PN...and give her to PN”, Dar 434: 1...9 (yr 16, B)

In the following, the addition of prepositional adi is exceptional yet the context indicates that the meaning is the same as in the first two examples above:

PN...ina 4EN 4MUATI u RN...it-te-me ki-i a-di-ia a-di (n date) 8 GUR ŠE.BAR 34 GUR ZU.LUM.MA 13 GÎN KÛ.BABBAR...a-na-āš-šā-am-ma...a-nam-din-ma “PN swore by Bēl, Nabû and Darius...on (n date) I shall bring...and give to you 8 kur barley, 34 kur dates (and) 13 shekels of silver””, Dar 339: 1–7 (yr 12, B)

Further examples: YOS 7 50: 6–9 (U) AnOr 8 79: 5 (U), Dar 176: 5–10 (B) and Dar 504: 5–8 (B). The following two examples have been separated from the above on the grounds that the first one offers no specific date for the completion of the promised act, while the second contains two assertory oaths and one promissory oath introduced by a single ī:\

i-na 4EN 4NĀ u FDN it-te-mu-ū ki-i a-di nu-ū-nu ma-la ni-bar-ri 10-ū nu-ū-nu a-na SÂ.DUG, ša FDN ni-nam-din “they swore by Bēl, Nabû and the Lady-of-Uruk ‘regarding any fish we catch, we shall give one tenth of the fish as a sattukku-offering to the Lady-of-Uruk’”, TCL 13 163: 16–18 (Camb yr 3, U). Note that nibarrī, which looks like a final weak indicative, must grammatically be subjunctive.

PN ina 4NĀ û a-di-i šā 4NĀ.I...it-te-me ki-i a-di-i (n date) 1PN 1PN1 u 1PN, la-ta-ni-ka ab-ba-kām-ma...a-nam-dak-ka lu-ū āl-il-tū lu-ū ri-ik-saʔ?-[tiʔ] lu-ū IM.DUB. MEŠ...a-na-āš-šā-am-ma a-nam-dak-ka mim-mu šā ni-ik-li u pe-el-ša-tu, it-ti-ka ad-da-ab-bu “PN swore by Nabû and on the oath of Nbn...“on (n date) I shall bring and give to you PN, PN1 and PN2, your servants. I shall bring and give to you either the IOU, contract or tablets. (Woe betide me if) I am planning any deception or lie with you”, JRAS 1926 : 9–16 (yr 10 Nbn, B)

These two examples raise significant points regarding the meaning of ad(i). Because no date is specified in the first example adi cannot be the preposition. Because of the consistency in the use of tense and the significant evidence provided by the second example, it appears that a condition is being stated, where ad/ad(i) is a nominal clause functioning as the protasis of the condition and where the apodosis of the condition is the promise, which usually82 includes the date by which the swearer intends to fulfil it. The translation would be something like “if it is (to be?) a loyalty oath, (on n date) I shall...”.

---

82 TCL 13 163 being the exception, of course.
Previous observations (including those in CAD and AHw) regarding the meaning of adû and ad are brought together in Weisberg (1967, 32-34). He concludes that the adû is a loyalty oath in the form of a treaty between the sovereign and a vassal or a craftsmen’s guild, i.e. people who have autonomy within the confines of their country or workplace. The adû is needed only because the swearer is actually being allowed to keep his autonomy (ibid., p34). Watanabe also summarises earlier conclusions about the meaning of adû (1987, 6-8, which includes comments on Weisberg). She believes that the “adê-Vereidigung” is made before gods and confirms Weisberg’s findings that there is no evidence of adû prior to NA and NB. She does not doubt that adû is an Aramaic loan word.

I agree with both Weisberg and Watanabe that the conclusion of CAD that adû B must mean “majesty (?), power (?)” is not necessary. I assume that when a person swears ina DN DN... u (ina) a-de-e šá LUGAL he is swearing on the names of the gods and the loyalty oaths taken by both the king and the gods. I consider that adû (properly, adû?) must be plural (since both parties have to take oaths) and ad the singular and that they come from Aramaic τυ ‘ad “agreement, contract” (HAL, p744). The use of the singular kî ad suggests the reference is not to an actual oath, hence the translation “if it is (or, “were to be?”) a loyalty oath”.

As for the spelling, I assume ad was adopted from Aramaic after NB’s loss of final short vowels as the spelling a-du would otherwise have been used and then perpetuated. Instead, τυ was Akkadianised with the spelling a-di, perhaps by analogy or false etymology with adî the preposition. That the final vowel is lengthened (spelled a-di-i) and the 1cs oblique suffix is added is peculiar to Babylon

---

83 The difficult TCL 13 167: 4-6 is cited: PN...ina .keywords EN u .keywords NA ū a-di šá LUGAL a-na PN... it-te-me kî-i ina KADINGIR taš-tim? gu?L mu ta-at-ta-ši-iz ū ti-ru-tu ina lib-bi te-te-ēp-šá My suggested translation is: “PN swore by Bêl, Nabû and the loyalty oath of the king to PN, ‘(woe betide me) if you threw (assuming rami, ipitas form) yourself down’ [or,] ‘you complained (assuming ragamu) (and) planted yourself at the King’s Gate and created a brawl!’” (Camb yr 5, U). The suggestion for ragamu is in CAD širku A b, pi07a, however, targumu, tattasiz and tētepšu cannot be prohibitions and the use of iprâs and ipitas forms together in the same apodosis is not found elsewhere in my corpora. For a comment on the mood of tattasiz see IV §3a.

84 Or even “ād”?

85 This is in contrast to NA which seems only to have adû and adê as a plurale tantum, more correctly, adû and adê.

86 If my suggestion is correct, it could also indicate that short final vowels had been lost even while a distinction was still being made between the subject and oblique cases in the plural, because the plural (ina) adû is never (ina) *adû.

87 A false etymology for adî could be the interjection adû or enna adû “now then, here then”, which, according to CAD (A I p131) is attested in western dialects of Akkadian as well as in NB letters (from Uruk, Babylon, Nippur and elsewhere). It is not attested in NA or in the letters of my corpora. The style of the letters in which (enna) adû appears suggests they come from the reign of Nbâ and earlier.
and is presumably an innovation or a misinterpretation made by the speaker, and this explains why the protasis in the Uruk text TCL 13 163 does not have *ki adin.\textsuperscript{88} ad relates only to the swearer’s own (hypothetical) oath. The seriousness of the swearer’s commitment is indicated by his willingness to take a binding loyalty oath on it. ad is also found in earlier NB.\textsuperscript{89}

Statistical analysis of the oaths in the two corpora. The number of oaths per text is based on the presence of ki:

<table>
<thead>
<tr>
<th>number of texts</th>
<th>ki</th>
<th>kī ad(ī)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Uruk</td>
<td>18</td>
<td>17</td>
</tr>
<tr>
<td>Babylon</td>
<td>11</td>
<td>5</td>
</tr>
</tbody>
</table>

\textsuperscript{88} Or, "*ki anni?" Nor is it in ABL 282: rev 4–7 and ABL 1342: 25, which both have more than one person swearing (references taken from Dietrich, 1968, §33 p92). (Presumably in Babylon it would be *ki adini.)

\textsuperscript{89} In Kuyunjik NB the promissory oaths are (virtually?) always ki-i a-di (see Dietrich’s four examples, 1968, §33 p92).
Chapter IV: The finite verb

A section with examples of finite verbal forms is given at the end of part 2. The following inflections are observed:

3  i-  i-........-ū, -u, -ø
3f ta- i-........-ā
2m ta- ta-........-ā
2f ta- ta-........-ā
1c a- ni-

The spelling of the ending of the 3mpl is ambiguous; the ending is occasionally not represented. See the discussion in chapter 3 §2, where it is concluded that a final vowel was usually intended but that it was a matter of personal choice whether to record it with or without an extra -u/-ā sign (or whether to record it at all). There is no evidence that the Common Semitic 2fs -ī final was used.1

§1 The verbal system in the texts under analysis

iprus, iparras, iptaras (and iptanarras and paris) in NB have recently been thoroughly investigated by Streck (1995, part II). I shall therefore limit myself to giving the main features of the three finite categories along with comments on the few attestations of verbs with a -tan- infix. (paris has already been discussed in chapter 1, I §2, above.) In keeping with Streck I shall name the systems according to their G forms so as to avoid identifying them as preterite, perfect etc. Some developments in NB are worth noting here, especially the use of iptaras. The criteria for the use of iptaras appear to be quite clearly delineated in most cases, a fact which I am not sure Streck made fully clear.

1 See also the comments on 2fs imperatives (I §5a, above).
a) *iprus*

This form is used to refer to an action completed at the time of writing i.e. a preterite (a term which I use for convenience elsewhere). The following three points are notable in NB (including NB from Kuyunjik):

i) *iprus* replaces *iptaras* when *iptaras* is negated or in a subordinate clause except when *iptaras* is in the protasis of a future conditional sentence (III §3, above, and Streck, p120):

\[
\text{ki-i a-na DUMU.LUGAL a-na muh-hi la âš-pu-ru \ "(woe betide me) if I haven't written to the crown prince about it", TCL 9 132: 15–16 (letter, Nbn yr 1–12, U)}
\]

ii) The 1cp/preterite has replaced the cohortative (i.e. SB i *niprus* has become *niprus*).

iii) On page 127 (§25a) Streck notes that the precative is no longer always formed with *lu*-, *li*-, owing to the influence of the Aramaic imperfect. His examples (using *kapdu* + *iprus* on page 129) clearly demonstrate this. Most of the examples are those in which the relevant verb has a consonantal inflectional prefix. The texts in my corpora mostly (but not always)\(^2\) use *lu*-, *li*- + pret, but in the case of *idû* it is sometimes difficult to draw the line between its precative, whose *lu* prefix (if prefix is what it is) is not attached to the 3ms or 3cpl finite forms, and between its emphatic (i.e. using the asseverative morpheme *lû*) and preterite forms.

b) *iparras*

As well as its use in referring to the present (in both main and subordinate clauses) and the future (main clauses),\(^3\) *iparras* is used in the following cases:

i) as an imperative in verbs of the third persons (see I §4e, above and Streck, §8b, p95f).

ii) As the historic present (Streck, §12a–g, 106–109) *iparras* is still productively used, mostly with *qabû*. It is used in circumstantial clauses, i.e. in describing an act occurring simultaneously with another (III §2f, above).

There is no evidence of a “Gt” present (*iptarras*) in the NB of these corpora.

\(^2\) See I, §4c ii, above.
\(^3\) See *iptaras* below for the future in subordinate clauses.
c) iptaras

In the texts under scrutiny here, most of the examples of *iptaras* fit into three categories:

i) The perfect, which refers to a recently completed action whose effects are still noticeable at the time of writing, or significant to the present, and which is therefore common in recorded speech and in verbs like šapāru, qabū and šūbulu. All examples appear to be in main clauses:

- at-ta-pal-sa-\(^\) “I have prostrated myself” (napalsuhu), CT 22 151: 13 (letter, B)
- DUMU LUGAL ši-pir-ti il-tap-ra um-ma... “the crown prince has sent a message, thus...”, YOS 6 71: 19–20 (Nbn yr 6, U)
- nu-ul-te-bi-la “we have brought”, YOS 3 113: 9 (U)
- it-te-en-tir “he has been paid”, Dar 469: 10 (B)

ii) *iptaras* in this category may be considered a derived form. In the separative *iptaras*, -t- is used to introduce a direction away either with verbs of motion (exx. alāku, musūru) or with verbs of taking or carrying (exx. nasū, abāku):

- it-ta-āš-ši “he took away”, YOS 3 79: 39 (U); ta-at-ta-ši “you took away”, CT 22 194: 19 (B), ni-it-ta-ši “we took away”, Dar 296: 9 (B)
- gab-bi ana MN it-tal-ku-\(^\) “they all went away in Dūzu”, YOS 3 69: 4–5 (letter, 539–526, U), cf. CT 22 182: 6 (B)
- si-mir-re-e-ši ip-ta-tar il-ta-su-um “he undid his fetters and ran away”, YOS 7 88: 17 (Cyr yr 2, U)

or to introduce a reflexive, reciprocal or intransitive element similar to Streck’s “flexives (inflectional) -ta-” (§48, p215ff). These uses of *iptaras* are uncommon and the distinction between the infixed and the non-infixed forms are often vague:

- im-ta-har “he bought”, Nbn 85: 7 (B) i-da-har-in-ni “they received from me”, Dar 296: 5 (B) (reciprocal)
- (ana muhhi) i-te-lu-u “they made withdrawals (?) (therefrom)” Dar 551: 8 (yr 22, B), cf. the singular (ana muhhi) i-te-lu in TCL 13 160: 7 (B) (reflexive)

---

4 Some -t- forms cannot be categorised, cf. iptatar in ii, below.
5 I am unable to find this observation in Streck. Woodington approaches the subject on p87. In the paper on subordinating conjunctions by Dietrich (1969), he refers throughout to the appearance of iprus, ipparas and *iptaras* as futurum exactum (see iv, below) forms in subordinate clauses. The lack of other forms of *iptaras* is not emphasised. As there are no conclusions in his paper, it is possible to overlook this very significant point.
6 Perhaps the -t- infix introduces a personal element to focus the action on the person. The use of ahāmeš “mutually, together etc.” has replaced reciprocal *iptaras* in most cases. See II §3 a and b, above.
LU.DI.KU.MES im-tal-ku-ma “the judges deliberated...”, Roth: 42 (Cyr yr 9, U) (reciprocal, intransitive)

ina muh-hi ku-ru-up-pi...at-ta-šab “I sat on the chest”, YOS 7 78: 12...13 (Cyr yr 7, U) (intransitive, reflexive?)

All four verbs in the following are preterites with an intransitive or reflexive element:

PN...ina 4EN u 4NÁ ā a-di šá LUGAL a-na PN,... it-te-me ki-i ina KÁ DINGIR taš-tim? gu?i1-du ta-at-ta-ši-iž ā ti-ru-tu ina ḫu-bi te-te-ši-iš “PN swore by Bēl, Nabû and the loyalty oath of the king to PN, 'you did not throw (ramû) yourself down (and) plant yourself at the King's Gate and create a brawl’”, TCL 13 167: 4–6 (Camb yr 5, U) 7

iii) Consecutive -t-

Verbs which describe the consequence of a previous action which is presented in a subordinate clause with kī are invariably infixed with -t-.

DINGIR.MES ki-i u-šal-lu-ú še-bu-ta-a ak-ta-šād “when I prayed to the gods I achieved my wish”, CT 22 194: 7–9 (letter, IMB, B)

(two ducks) ki-i ni-du-ku i-na ti-du lni1-iq-te-bir “(two ducks) when we killed them we buried them in the mud”, Iraq 13: 13 (Camb yr 2, U) 8

There is one example using arku and this also generates a consequential -t-:

ā-är-ku...u-lu-É PN a-na É PN,... na-ad-nu uš-ta-hi-is-su “and after...he had been given from PN's household to PN's...household (PN) withdrew him”, VS 4 87/88: 4...7 (Dar yr 1, B)

iv) When iptaras is used to refer to the future in subordinate clauses, it is best understood as a future perfect (futurum exactum). It is usually found in the protasis of conditional sentences, following kī, but also occurs after other subordinating conjunctions or phrases, such as arki, ašar, (ina) ūmm:

āš-šá it-tar-da-a-nu 1+et ina lbi-bi-ši-na a-na FDN...ta-an-na-an-din “as soon as they (f) come down one of them is to be given to the Lady-of-Uruk...”, YOS 6 71: 22...23 (Nbn yr 6, U)

[ar]-ki PN ana šim-tu it-tal-lak...pani FDN tad-dag-gal “once PN has died...(she) is to belong (G) to the Lady-of-Uruk”, YOS 7 66: 20–21 (Cyr yr 7, U)

u-4-mu pa-qa-ri ina muh-hi PN it-tab-šu-ú “the day a claim arises9 against PN (the slave)...”, Dar 492: 8–9 (yr 19, B) cf. YOS 6 143: 7 (U) (ki-i...it-tab-šu-ú)

---

7 This difficult statement is discussed in the comments at the end of HI §4c, above (assertory oaths).
8 Contrast this with the G form in the subordinated šā...i-du-ku-ma i-na ti-du iq-bi-ri “which... they had killed and buried in mud”, 14...17.
9 Literally, “will have come into existence” (NFuturum exactum).
i-na u₄-mu LU₄.mu-kin-nu lu-₄ ba-ti-qu it-tal-kám-ma a-na PN₄...uk-tin-nu...“the day a witness or denouncer comes and gives evidence to convict PN...”, YOS 6 122: 1...4 (Nbn yr 9, U), cf. Nbn 679: 1-4 (B) (ina u₄-mu PN₄...tu-uk-tin-nu...); Weisberg 2: 8-10 (U) (ina u₄-mu LU₄.mu-kin-nu uk-te-nu-u₄...).

i-na u₄-mu PN,...ina É LÚ.KAŠ.TIN.NAM it-tan-ma-ru PN₂ ŠEŠ-sú mul-le-e a-na muh-hi-sú un-da-al-lu “the day PN...is seen in the tavern, PN₂ his brother is to give compensation himself”, YOS 7 77: 1...7 (Cyr yr 8, U).

ina u₄-mu ú-du-₄...mim-ma ša ár-ki u-de-e...it-ta-as-ba-tu...“if, in the future (any other) item...anything (coming) after the items (in question) are found...”, TCL 13 142: 7...12 (Cyr yr 7, U).

The following has both a future conditional and a future subordinated clause:

a UTU lu-₄ i-de ki-i u₄-mu PN i-kaš-sá-da a-na UGU mam-ma ma-la KUR.MEŠ aq-ta-bu-₄ al-la ana UGU-ka Difficult. “Šamaš knows, (I'm a dead man) if I speak to anyone in the whole world about it apart from you, by the time Gobryas arrives”, YOS 3 106: 7-9 (letter, Cyr-Camb, U).

Although it is unusual for ūm to use ipparas, it appears that the -t- infix is avoided when a subordinating conjunction expressing the future contains ša and its clause has only a single verb:

ul-tu u₄-mu šá ki-i-ri i-nap-pa-hu i-di-šá a-na muh-hi PN...i-man-nu “as soon as he lights up the furnace he is to count up his earnings from PN...”, VS 6 84: 16-17 Nbn yr 12, B.

u₄-mu šá us-su-nu ina ši-pir-tu, EN.MEŠ liš-pur-₄-nu “as soon as they come out may Sirs write by means of a letter”, YOS 3 21: 16-18 (letter, Cyr-Camb, U).

u₄-mu šá PN,...PN₂ a-na GN it-ru-bu... “when PN...and PN₂...get into Babylon...”, TCL 13 222: 1...3 (around Dar yr 1, U).

If there is more than one verb note how the final verb subordinate to ša and mala₁¹

in the following two examples reverts to the ipparas futurum exactum:

u₄-mu šá PN,...a-na UGU LÚ.₄-ra-sá i-šap-par-ru ù LÚ.₄-ra-sá la it-tan-nu hi-tu šá PN₂...i-sad-dad “if PN writes about a stand-in but does not present a stand-in he will bear the punishment of Gobryas...”, TCL 13 150: 4...8 (Camb yr 2, U).

ŠE.NUMUN ma-la ina lib-bi i-pet-tu-ma dul-lu ina lib-bi la ip-pu-sú ù ul-tad-du-u šá re-he-et ŠE.NUMUN ma-la i-pu-sú sis-sin ul i-na-ás-sú-₄ “any arable land that they open there but do not do the (upkeep-)work and have let it fall fallow; they will not draw a bonus on any remaining arable land that they have worked”, Camb 142: 9-16 (yr 2, B).

---

₁¹ My interpretation of this statement is explained in V §1a 1, below.

₁² Whose function is similar to ša. See III §1b, above.
An exception to this pattern may have come about as a result of the second verb being negated:

\[ a-di \text{ UGU } \text{šá at-tu-ú-nu hi-tu ta-ah-ta-at-ta-}^\prime \text{ a-na-kuhi-tu ul a-hať-tu } \text{"until you make mistakes I won't make mistakes"}, \text{ YOS 3 17: 36-37 /TCL 9 129: 34-36 (letters, early Camb? U)} \]

Notes

1) The preterite and perfect of separative or consecutive iptaras are the same (i.e. the “Gtt” perfect (iptatras) does not occur in the NB of these texts):

ul-tu GN a-na a-su-tu at-ta-si “I have gone out from Babylon on an expedition”, YOS 3 106: 30–31 (letter, Cyr–Camb, U) (perfect + separative)

KU.BABBAR a’3 MA.NA ina a-dan-á-šá PN a-na PN, it-ta-din ú-il-ti |y| LÚ-tá PN, ki-i u-tir-rí a-na PN it-ta-din “PN has given the (aforementioned) three minas of silver to PN, within the deadline and PN, has given the IOU and the slave back to PN”, Dar 319: 9-13 (yr 12, B) (The second ittadin is perfect and consecutive.)

2) The 3ms perfect and futurum exactum (which is invariably subjunctive) of nadānu are ittadin and ittannu respectively. Contrast ittannu in TCL 13 150 above with ittadin in OECT 10 105: 11. There is one unexplainable instance of ittannu replacing ittadin in CT 22 82.12

d) Verbs with the -t(a)n- infix (iptanarras)

On page 118f and p160 n371, Streck observes that the Gtn is more or less unproductive. This is confirmed in the texts here, where it survives only in the Babylon legal phrase adi 12 TA.ĀM ītanappal “he is to pay twelve-fold”,13 and in the Gtn preterite of šasā: īštassā, “they read (pret.) out”.14 The unusual forms of amāru in Nbn 85: 13, Nbn 573: 7 and YOS 7 77: 615 may be interpreted as an N futurum exactum (ittapras),16 but the following may be intended as an Ntn futurum exactum, although it may simply be a misspelling of it-ta-na-ma-ru:

---

12 UDUNĪTA ki-i id-din-nu UDUNĪTA ul at-tu-á-a ul-te-pi-il ù it-tan-nu “when he gave the sheep the sheep was not mine, he had swapped it and given it (away)”, 9–12 (letter, middle Dar, B). (It may be significant that the scribe has a tendency to put (C)VC-CV spellings for (C)VC endings throughout.)

13 As in VS 5 38: 38 and Dar 26: 28.

14 As in Nbn 356: 30, Nbn 1113: 14 (both B) and YOS 7 7: 74 (U).

15 it-ta-na-ru, it-ta-na-mar-ri and it-ta-na-ma-ru, respectively, “(if) he has been seen”, probably ītta:nār.

16 As may be the following forms of ētēru: it-te-en-tir “he has been paid”, Dar 469: 10 (B) cf. Dar 266: 9 (B) which are to be contrasted with the N preterite, in-né-et-ti-ir in Dar 474: 9 (B) and in-né-tir in YOS 7 114: 6 (no difference in meaning intended).
§2 The derived forms of the verb

a) D form

The examples of the D forms are transitive or factitive.

u-mar-ri “he will chop/prune”, Dar 35: 8 (B)

ū-ha-mu-ka “they are giving you confidence”, CT 22 194: 17 (B)

(fish) ū-hal-la-qu-↑ “they make lose (fish)”, TCL 13 163: 5 (U)

ū-qar-rab-bu-ū-nu “they (who) present”, TCL 13 157: 6 (U)

kullumu,17 murruqu, mūšuru and sullu are always D:

ū-mar-*raq-ma “he will clear (of claims)”, Dar 537: 13 (B)

DUMU.MUNUS-su ša PN ul tu-maš-sar “she is not to abandon PN’s daughter”, BE 8 47: 6 (Nbn yr 5, B)

ū-sal-la “I pray” passim

D verbs may have either a consequential or futurum exactum -f- infix (c iii and iv, above):

PN...iz-qat AN.BAR.MEŠ ki-i id-du-ū un-da-šr “having put him in chains, PN (then) let”, YOS 7 7: 125...126 (Cyr yr 1, U)

PN...kak-kab-tu, ki-i iš-mi-tan-i ni a-na FDN uz-zak-kan-nu “having marked me with a star, PN (then) consecrated me to the Lady-of-Uruk”, YOS 7 66: 2...3 (Cyr yr 7, U)

un-da-al-lu “he will have filled”, YOS 7 77: 7 (U)

uq-tar-ri-bi... “(if) they offer...”, YOS 7 90: 15 (U)

b) Š forms are causative

Babylon:

pa-qa-rī ū-šab-šī “he made a claim”, Nbn 356: 27

pu-ut e-te-ru u-šá-āš-ša-an-ni “he made me guarantee the repaying”, TCL 12 122: 8

u-šē-zī-fb “he produced”, Camb 253: 5

u-šē-el-lu “he is to swear”, VS 6 120: 11, cf. u-šē-el-li, Dar 468: 11

17 An example is in CT 22 78 in iii, above.
u-šē-ti-iq “(whom) he passed on to”, Dar 551: 12

tu-šak-ka-al-la “she is to nourish”, BE 8 47: 4, 10

tu-šad-gil “(which) she transferred”, Nbn 65: 8, 15

la u-šar-šu-š “they made him not have”, Nbn 356: 34

a-na LÚ mu-kin-nu-ú-tu u-šē-eš-še-bu “they will make him give evidence”, VS 6 97: 11-12

u-šē-lu-₃ “they are to swear”, Dar 358: 6

Uruk:

u-šē-ri-bu-ma u-ša-ah-mi-is “he made go in and ransack”, YOS 6 108: 8 (Nbn yr 8)

(A.MEŠ) u-šâ-as-bat “he is to make water flow”, YOS 7 162: 8

u-šē-er-reb “he is to make enter”, TCL 13 164: 14

(EN) lu-šē-bi-la “may Sir bring”, TCL 9 132: 23

lu-šē-lu-nu “let them load up”, YOS 3 29: 17

Note The spelling of ušellu, tusakk&J r usesseb(u) and ušerreb suggests a doubling of the middle radical in initial weak in the present-future; contrast with the spelling of the preterites ušezib, ušētiq and ušēribuma.

Consecutive and futurum exactum Š forms:

nu-ul-te-rib-su “we (then) made him enter”, YOS 7 88: 21 (U)

uš-ta-hi-is-su “he (then) took him back”, VS 4 87/88: 7 (B)

ul-tad-du-u “they will have let fall fallow”, Camb 142: 14

Babylon:

in-na-di-in “(that) it is given”, CT 22 182: 8

im-ma-ši-ši-h-ma “it was measured…”, Nbn 293: 10

in-né-ter-su “he was repaid”, Nbn 314: 11, Camb 68: 15 (indicative)

ta-nam-ma-ri “(wherever) it (f) is seen”, OECT 10 105: 12

la an-na-mir “I was not seen”, Nbn 1113: 18

in-na-din-nu “they are sold”, Peek 22: 26

in-na-as-sa-hu-₃ “they are being pulled up”, CT 22 81: 18

---

18 Cf. the singular a-na LÚ mu-kin-nu-tu ina lib-bi u-šē-*ši-ma, which on collation is probably šib on an erasure, rather than ušēsimma, Nbn 442: 6 (B).

19 Full extract is in c iv, above.
Uruk:

\textit{li-in-na-din} “may it be given”

\textit{in-na-ter} “he was repaid”, YOS 7 114: 6

\textit{iš-sá-al-lu-ma} “he was asked...”, YOS 7 46: 16

\textit{in-na-an-di-na} “it is (usually) given”, \textit{JNES} 1993: 27, cf. \textit{in-na-an-di-nu} TCL 13 182: 25

\textit{ta-an-na-ad-nu} “(when) it (f) was given”, YOS 6 71: 32, cf. \textit{ta-na-an-di-nu} “(before) she was(!) sold”, YOS 6 79: 13

\textit{tan-nam-ru} “it (f) was seen”, YOS 7 102: 26

\textit{ta-an-na-an-din} “it (f) is to be given”, YOS 6 71: 23

\textit{is-si-ni-qu-ma} “they were checked...”, TCL 13 142: 3

\textit{ip-par-su} “they were dispersed (in a sale)”, \textit{AnOr} 8 70: 15

\textit{in-nam-ru-ma} “they were inspected...”, \textit{Iraq} 13: 18

\textit{ZU.LUM.MA in-nam-mi-du} “dates (which) are estimated (for an imittu)”, YOS 7 38: 6

Perfect and futurum exactum N forms are rare. (There are no examples of consecutive forms.):

\textit{it-te-en-tir} “he has been paid”, Dar 469: 10 (B)

\textit{it-tan-ma-ru} “(if) he is seen”, Nbn 85: 13 (B)\textsuperscript{20}

\textit{it-te-se-mu-u} “(if) it is heard”, Nbn 682: 7 (B)

\textit{ina u-mu ū-du-ū...ina ŠU.II-šā it-ta-aš-ba-tu hi-tu šā PN...i-šad-da-ad “(the day)...(any other) item is found in his possession he will bear the punishment of Gobryas”, TCL 13 142: 7...13 (Cyr yr 7, U)

\textbf{§3 Irregular and rare verbs}

\textbf{a) ušuzzu}

\textbf{Infinitive G:}

\textit{u-šu-uz-zu} passim

\textit{GUB-zu} passim

\textit{i-na u-šu-uz Šā... “in the presence of”, Nbn 1113: 26 (B)

\textsuperscript{20} For other examples using \textit{amāru} see c iv, above.
Predicative form (stative):

\( \text{u-šu-uz-zu} \) “he was standing” (?) YOS 6 235: 7 (U)

\( \text{u-šu-uz} \) “he is stationed” YOS 7 102: 18 (U)

\( \text{u-šu-uz-za-ti} \) “they (fs collective) were stationed” referring to servants (amēlitti), BIN 1 120: 10, (U)

\( \text{u-šu-uz-zu} \) “(who, mpl) were stationed”, RA 11: 11 (letter, 533–532, U)

\( \text{u-šu-uz-za-\text{-}3} \) “they (fpl.) settle for (=ana)”, VS 5 45/46: 12 (Camb yr 1, B)

Imperative (2pl):

\( \text{it-ti PN ţz-zi-za-ma} \) “stand by PN...”, CT 22 73: 12 (letter, early Dar, B))

G preterite:

\( \text{la iz-za-zu} \) “he will not agree”, 21 TCL 13 182: 7 (U)

G present:

\( \text{la iz-za-zu} \) “he is not to stay”, YOS 3 179: 33 (U)

\( *\text{ţz-zi-uzu} \) “(who, ms) stands by”, CT 22 73: 5 (B)

\( \text{iz-zi-uzu} \) “he stands by”, TCL 13 182: 7 (U)

\( \text{iz-za-az-zi-ma} \) “he is to convene (with=itti)”, Dar 163: 9 (B)

\( \text{iz-zi-uzu} \) “(in which) they stand”, (referring to trees) Camb 286: 2 (B)

\( \text{li-iz-zaz-ma} \) “let him be stationed”, YOS 7 102: 15, 22 (U)

These examples suggest an unclear distinction between past and present forms. Kuyunjik NB clearly had \( i \) for preterite and \( a \) for present as the second vowel (Woodington p149). Streck (1993b, 280–282) provides examples suggesting a present singular izzaz and plural izzizzū. The number of examples in my corpora is insufficient for such a supposition except that the singular izzız functions as a secondary predicative verbal adjective form to usuz and that izzaz is indicative. Streck (ibid., p282) gives usuz as the standard predicative form.

G with reflexive -\( t\)-

\( \text{ta-at-ta-ši-izu} \) “you (sg) stayed/placed yourself”, TCL 13 167: 5 (U)

---

21 The Akkadian preterite indicates that agreeing is a single act already completed but that the emotion of agreement continues up to the present. In expressing the same idea English uses the present.
Š forms:

Infinitive: šu-uz-zu-zu “registering”, Joannès TEBR 66: 15 (B)

Preterite:

u-šá-az-za-[az] “he recorded”, Dar 296: 15 (B)
uš-zi-zu “they recorded”, Nbn 356: 35 (B), uš-zi-zu Roth: 45 (U)

Present. Even in the Š the second vowel can be both i or a:

u-šá-az-zi-iz “he is to register”, YOS 7 113: 15 (U)
u-šá-az-zu-ma “they will register”, Dar 384: 5 (B)
u-šá-az-zi-zu-ma “they will employ/station them”, YOS 7 156: 12 (U)

The following three examples from YOS 3 83 (U) are all difficult:

u-šá-az-zi “I (?) have registered”, YOS 3 83: 8 (see line 23, below)
u-šá-az-zi-zu “(which) he (they?22) registers”, YOS 3 83: 16
u-šá-az-za-zu-ma “which I register”, YOS 3 83: 23

With infixed -t-;

i) as perfect:

ul-ta-az-zi “he has recorded”, YOS 3 107: 31 (U)
ul-taz-zi-iz “he has registered”, Dar 296: 4 (B)

ii) as futurum exactum

ki-i la ul-te-zu-? “if they don’t consent(?)/register(?)”,23 Dar 384: 13 (B)

Precative:

lu-šá-az-zi “may he register”, YOS 3 107: 8 (U)

b) Other irregular and rare verb forms:

edû “to know”, is used in the preterite where English uses the present:24

G

i-de “he knows”, YOS 3 87: 24, 6, YOS 3 8: 6 (both U)
te-de-e “you know”, TCL 13 181: 6 (U)
i-de-e “I know”, TCL 13 222: 15 (U)
i-du-ü “(if) I knew”, Dar 53: 8 (B)

---

22 See impersonal subject (VI §2, below) for full context.
23 The context is unclear.
24 The preterite refers to the act of comprehension. Once the fact is comprehended a continuing state of knowing has been reached.
i-du-‘u, i-de “they know”, YOS 3 113: 10, 24 and YOS 3 17: 37 (both U)
i-du-u “they know”, YOS 3 8: 33 (U)

Š
šu-du-ú (umma) “(the facts) were made known...”, Camb 286: 7 (B)
(predicative form)
u-še-di “it was made known”, CTMMA 2 54: 15 (B)
u-nu-še-di “we made known”, Nbn 356: 23 (B)

ittūlu Š is attested once:

a-kan-na ina qaq-qar lu-ul-ti-il-šú “let me make him grovel on the ground, here!”
YOS 3 19: 28 (letter, early Cyrus, U)

bašū usually occurs as a predicative stative in mala bašū, but the finite form is also sometimes used, with the same meaning: 25

G
i-ba-aš-šu-ú “(wherever) they may be”, JRAS 1926: 14 (B)
i-ba-aš-ši-i “which may be”, TCL 13 181: 13 (U)
ma-la i-ba-aš-šu-ú “whatever there may be”, YOS 3 66: 13 (U)

The N form is the ingressive of bašū “to come into existence”:
ib-ba-aš-šu-ú “(which) may transpire”, Dar 379: 68 (B)
i-ba-aš-ši-i “(which) may (pl) be”, YOS 7 114: 10 (U)

N futurum exactum:

u-e-nu pa-qa-ru ina UGU PN it-tab-šu-ú “if (ever) a claim arises against PN”, Dar 492: 9 (yr 19, B)

išu “to have” is discussed in the Note at the end of I §2 c, above.

c) Quadriliteral Verbs

The two corpora give examples of three verbs:

nabalkutu “to move over”

ŠE.NUMUN ma-la ib-ba-lak-ki-tu-ú ma “any fields that they passed over (i.e. left fallow)...”, YOS 6 150: 12 (Nbn yr 11, U)

a-na PN...ni-ib-la-ki-it “we went over to PN...”, AnOr 8 27: 13...14 (Nbn yr 12, U) 26

The Babylon texts are limited to the use of the participial derivative nabalkattānu “transgressor”. 27

25 Cf. GAG §78b “prefixed stative”.
26 Reading this as a preterite, according to GAG paradigm 39: i.e. nibbalkit. From the context an infixed -t- would also be expected, nittabalkit.
27 See V §1c, below.
napalsuhu “to prostrate oneself”:

\[ \text{at-ta-pal-sa} \] “I have prostrated myself” (for attapalsah) CT 22 151: 13 (letter, Nbn or earlier? B)

namarkû “to be late”

LU.ERÌN.MES \[ \text{ma-du-tu} \ \text{ib-ba-ku} \ \text{mištš-hu} \ \text{i-gam-mar-ma} \ \text{u} \ \text{a-na-ku} \ \text{am-me-rik-ki} \]
“he is taking lots of workers to finish the work stretch and I am falling behind”, YOS 3 17: 51 (letter, 533–526, U)

šupêlu “to exchange”, is the causative of the Common Semitic root \[ p’l \] (“to do”) not otherwise attested in Akkadian:

\[ \text{uš-pe-el-lu} \] “that he swapped”, VS 6 120: 7 (B)

\[ \text{ul-te-pi-il} \] “he has swapped (it)”, CT 22 82: 11 (B)

\[ \text{uš-pe-e-lu} \] “(which) they swapped”, Camb 349: 5, 28, cf. \[ \text{uš-pe-lu} \] in VS 5 38: 4, 22 (both B)

§4 The ventive and its spelling

The ventive is found on the finite forms, imperatives, statives and precatives of verbs of motion. Because of the loss of short final vowels of verbs and predicative forms and the uncertainty regarding the final vowels in 3m plurals of strong verbs, it is not surprising to find that ventives can be identified with consistency only in plurals (2pl and 3pl) and in the singular and 1cpl of final weak verbs.\(^{28}\)

with enclitic -ma

| singular   | -a   | -amma |
| plural     | -n   | -nimma |

a) Uncoupled verbs

i) In singular, uncoupled,\(^{29}\) forms, ventives can still be identified in roots with a final weak radical:

Babylon:

\[ \text{i-na-áš-ša-a} \] “(which) he will bring”, Rutten: 5 (Nbn yr 1)

\(^{28}\) Ventive spellings are also retained in singular verbs with accusative and dative suffixes. See V §3 d and e, below.

\(^{29}\) i.e. those not in paratactic coordination with another verb following.
"which may come up" Nbn 273: 14 (yr 7)

"she brought", Nbn 310: 9 (yr 8)

"I shall bring", ibid.: 18

"may Sir bring", ibid.: 28, CT 22 78: 18, 21 (letter, 545–527)

Uruk:

"he is coming out", YOS 3 21: 9 (letter, Cyr–Camb)

"when we raised", YOS 7 97: 16, “we took (in oath)”, YOS 3 126: 31 (letter, 525–524)

"which may come up”, JNES 1993: 32 (letter, end Nbn?)

"when I raised”, YOS 3 17: 27 (letter, early Camb?)

"(which) was brought to Eanna”, YOS 7 2: 5 (Cyr acc)

\[\text{Uruk:} \]

\[\text{Babylon:} \]

"they come back (to court)”, Camb 286: 1430 (yr 5)

Uruk:

"as soon as they come out may Sirs write (us) a message”, YOS 3 21: 16–17 (letter, Cyr–Camb)

"they have come”, YOS 3 87: 7 (letter, 533–526)

“(as soon as) they (fpl) come down”, YOS 6 71: 22 (Nbn yr 6)

"may my Lord bring up”, YOS 3 83: 17–18 (letter, end Cyr?)

"may they bring up”, YOS 3 29: 17 (letter, early Camb?)

"bring", (2pl impv) TCL 9 98: 26 (letter, 540?)

TCL 13 157 (Camb yr 3) has two examples:

"(two people) who bring the dates which are the property of Ininn-of-Uruk into Eanna", 5–6

"(which) come up”, 13

See also CT 22 73: 9 cited in b, below.
iii) With suffixes:31

\[ \text{li-\overset{i}{s}-\overset{u}{n}-\overset{u}{n}-\overset{r}{s}-\overset{a}{n}-\overset{e}{r}-t\overset{i}{i}} \] “may they bring it”,32 YOS 3 107: 17 (letter, early Camb, U)

\[ \text{\overset{s}{u}-\overset{s}{a}-\overset{a}{n}-\overset{u}{n}-\overset{u}{s}-\overset{u}{n}-\overset{t}{u}} \] “make them come out”, TCL 9 111: 10 (letter, 533–532, U)

iv) Other examples with ventive endings but without a clear ventive meaning:33

Babylon:

\[ \text{\overset{i}{l}{q}- \overset{a}{r}-t\overset{a}{n}} \] “he will take”, CTMMA 2 54+Nbn 380: 24 (yr 9)

\[ \text{\overset{a}{r}-\overset{t}{i}-\overset{r}{n}-\overset{u}{n}} \] “(which, 3pl) exceeded”, VS 5 113: 5 (Dar yr x+3)

\[ \text{us-\overset{h}{a}-\overset{a}{n}-\overset{u}{n}} \] “pull out” (2pl impv), CT 22 79: 22 (letter, 545–527)

\[ \text{\overset{a}{h}{i}-\overset{n}{u}-\overset{k}{u}-\overset{s}{u}-\overset{n}{u}} \] “some were cut” (pl stative), CT 22 78: 10 (letter, 545–527)

Uruk:

\[ \text{\overset{i}{h}{i}-\overset{s}{u}{-n}{u}} \] “they deducted”, TCL 12 90: 15 (Nbn yr 7)

\[ \text{\overset{i}{n}{e}-\overset{e}{h{-s}{u}{-n}{u}} \] “they will deduct”, ibid.: 19

\[ \text{\overset{a}{t}{a}-\overset{a}{t}{a}{l}{k}{a}{-n}{u}} \] “(so that) you (mpl) may go”, YOS 3 22: 7 (letter, early Nbn)

\[ \text{\overset{h}{u}{r}{s}{a}{l}{a}{-n}{i}} \] “find out” (2pl impv), YOS 6 224: 18 (Nbn yr 15)

\[ \text{\overset{b}{a}{\overset{s}{h}{a}}} \] “which was” (msg subjunctive stative), TCL 13 132: 15 (Cyr yr 4)

\[ \text{\overset{a}{b}{-k}{a}{n}{a}} \] “taken away” (fpl subjunctive stative), ibid.: 3

Note It must not be forgotten that the ventive is identical with the Ic dative in verbs without motion, such as \[ \text{\overset{n}{a}{d}{\overset{a}{n}{u}}, \overset{q}{a}{b}{\overset{u}{n}}{u}, \overset{s}{a}{p}{\overset{\overset{a}{r}{u}}{u}}{u} \text{ and } \overset{m}{a}{k}{\overset{\overset{a}{r}{u}}{u}}{u} \] :34

\[ \text{\overset{s}{a}{t}{a}{q}{-b}{a}{-}\text{-\overset{a}{n}{u}}} \] “of which you spoke to me”, CT 22 73: 30 (letter, middle Dar, B)

\[ \text{\overset{i}{q}-\overset{a}{b}{-b}{a}{-}\text{-\overset{a}{n}{u}}} \] “he says”, CT 22 80: 15 (letter, Nbn? B)

31 For other examples of ventives with dative suffixes see V §3 f, below (personal pronouns).
32 I.e. cress (s\overset{a}{h}{l}{\overset{u}{u}}, fpl). The spelling may be very proper (pronunciation \overset{i}{s}{\overset{s}{\overset{s}{\overset{s}{\overset{s}{s}{i}{n}{\overset{e}{t}}}}}}?), or may reflect a change in the pronunciation of suffixes. See the discussion in part 2 §5 f and g, below.
33 Such occurrences are not to be taken as unique to NB; they occur in MB and SB as well. Aro (1955, p89, 3) noted the standard use in MB of ventive singular endings for such verbs as \overset{s}{\overset{a}{p}{\overset{\overset{a}{r}{u}}{u}}{u}}{u} and \overset{s}{\overset{a}{b}{\overset{u}{u}}{u}}{u} (whose spellings, incidentally, continue into NB: \overset{a}{l}{\overset{a}{t}{r}{a}}, \overset{\overset{i}{s}{s}{\overset{a}{c}{\overset{u}{r}{u}}{u}}{u}}{u}, \overset{\overset{\overset{\overset{s}{h}{i}{-l}{a}}{u}}{u}}{u}, etc.). He interpreted the receptor as the goal of the verb, hence the ventive. This pattern became standardised in MB but was already noted in OB (p91). On page 91 Aro notes MB kudurrus with verbs hitherto unknown in ventive form such as \overset{q}{a}{b}{\overset{u}{n}}, \overset{n}{a}{d}{\overset{a}{n}{u}}, \overset{n}{a}{k}{\overset{a}{r}{u}}{u} and \overset{n}{a}{k}{\overset{\overset{a}{s}{u}}{u}}{u}. \overset{s}{\overset{a}{p}{\overset{\overset{a}{r}{u}}{u}}{u}}, \overset{q}{a}{b}{\overset{u}{n}}{u} and \overset{n}{a}{d}{\overset{a}{n}{u}}{u} continue in ventive form in NB. See examples and Note 1, below.
34 These are verbs which normally demand an object and a recipient or experiencer. See VI §3 a, below (\overset{a}{n}{a} and the indirect or non-direct object). Examples of \overset{q}{a}{b}{\overset{u}{n}}{u} in the plural are also found in two Uruk letters:

\[ \text{\overset{i}{q}{-t}{a}{-b}{u}{-n}{u}} \] “they have said”, YOS 3 169: 13 (539–526)

\[ \text{\overset{i}{q}{-t}{a}{-b}{u}{-u}{-n}{u}} \] “(about which) they have said”, YOS 3 107: 14 (early Camb).
šā aq-qab-ba-ː “about which I was (historic present) speaking”, CT 22 193: 26 (letter, 551–520, B)

liq-łaː “he has said”, CT 22 195: 13 (letter, 551–527, B)

liq-ba-a “may they (mpl) speak”, passim in letter greetings

šE.BAR aPN u PN, i-da-har-in-nū “that barley, PN and PN, have received it from35 me”, Dar 296: 4–5 (yr 11, B)

il-tap-par-ra-nu “they have written (to me?)”, CT 22 193: 10 (letter, 551–520, B)

liš-pu-tu-ː “may they send to us” (polite impv), YOS 3 113: 19 (letter, early Cyr, U)

šup-pur-ra-nu “send (2pl) to me (us?)”, YOS 3 127: 16 (letter, 538–532, U)37

il-tap-ra-nu um-ma ina GN šab-ta-nu “they have written, ‘we’re held up in Ur’”, YOS 3 8: 25–26 (letter, early Dar? U)

The ventive is not used with the lclp dative suffix in the following:

i-qab-ba-u-nā-su/i-qab-ba-u-nā-su-stf urn-ma “they tell us...”, YOS 3 17/TCL 9 129: 39, 36 (letters, 533–526, U). Contrast this with the archaically spelled ventive in:

iq-bi-ː niš-ša-nu-tu “they said to them”, GCCI 2 101: 7 (Cyr yr 4, U)

b) The ventive is often used suffixed with an enclitic -ma. As it is therefore not common in pause, it commonly appears in sentences where two verbs are coupled. The first verb is ventive and the second is often nadānu or a verb of speaking or swearing, often in oaths.

Singular and lclp:

(various items) a-na-ːša-am-ma...a-na PN...a-nam-din-ma... “(I swear) I shall bring (various items) and give (them) to PN...”, Dar 309: 5...6 (yr 11, B)

PN...ab-ba-kām-ma a-nam-dak-ka “(I swear) I shall bring PN...and give (him) to you”, Dar 339: 6...7 (yr 12, B), cf.: PN...ab-ba-kām-ma a-nam-dak-ka-ːnū-tu (sic)38 “(I swear) I shall bring PN...and give (him) to you (pl)”, YOS 7 50: 7...9 (Cyr yr 5, U)

ki-i a-dan-nu i-te-et-qa a-di ANŠE ni-ib-ba-kām-ma ni-nam-di-nu “(woe betide us) if the deadline passes before we bring and give the donkey”, TCL 13 165: 10–11 (Camb yr 4, U)

35 mahāru takes ana normally for the non-direct object. See VI §3a, below.
36 Although one person has written this letter, he slips into the lclp on line 8.
37 See also YOS 3 8: 24, cited in b, below.
38 For anamdakkušu. See V §F below for sound changes exhibited by nadānu when suffixed with personal pronouns.
Plurals are easily identifiable:

\[ PN \, \widehat{u}-\text{bil}-lu-nim-ma...[aq-bi]... "they brought \, PN \, (into court) \, and...she \, said...", \]
Roth: 30...33 (Cyr yr 9, U)

se-pi-ri \, \widehat{u}-\text{bil}-lu-nim-ma \, ri-ti \, šá \, PN \, \text{\textipa{a-d-di-ma}} \, iq-bi... "they brought a scribe \, (of Aramaic) \, in \, and \, he \, made \, out \, (what \, was \, on) \, the \, hand \, of \, PN \, and \, said...", RA 67: 20–23 (Nbn yr 17, B)

IM.DUB KI.LAM...i-na-šā-šu-nim-ma a-na PN i-nam-di-nu-... "they are to bring the purchase tablet and give (it) to PN", VS 5 74/75: 18...20 (Dar yr 11, B)

ŠE.BAR...ul \, ib-ba-ku-nim-ma \, ul i-nam-di-nu-nu "they are not bringing and giving me the barley", CT 22 73: 7...9 (letter, early Dar? B). See also lines 13–14

i-mah-ha-ra-nim-ma a-na GN u-šá-ak-šá-du-nu "they will receive and bring back to Babylon", YOS 7 63: 6 (Cyr yr 7, U)

ur-ra-da-nim-ma a-na UGU FDN u FDN, il-la-ka "they \, (fpl) \, are coming down and going to FDN and FDN", YOS 6 71: 21–22 (Nbn yr 6, U)

ŠE.BAR liš-šu-nim-ma lid-di-nu-nu "may they bring and give barley", YOS 3 8: 24 (letter, early Dar? U)\textsuperscript{39}

Note on \( ibina(mma), \, \text{binnā}(nimma)\), "give me". As discussed in imperatives (I §4d, above), this verb is probably a combined contraction of the Aramaic and NB (ventive) imperatives for "to give". The indirect object is always 1c.

Conclusions, and comments on the orthography

The ventive can clearly be seen in final weak singular forms and all plurals apart from 1cpl. It may well exist in other forms but its existence is masked by the ambiguities of the script. In the final weak forms it continues to override the subjunctive. There are more examples of ventives from Uruk than from Babylon.

In singular final weak forms the spelling is usually Ca-\( -\), although the few examples using Ca-a or a, indicate a long vowel. (This is to be contrasted with the case of the plurals of verbs with a strong final consonant, which are often spelled Cu-\( -\) or CVC-\( -\).)

In the plural, the spelling is usually -nu and sometimes -ni (\( it-tal-ku-nu, \, i-tur-ru-ni \)).

Observations

Earlier scholars had believed that the ventive plural was the Akkadian reflex of the energetic form in the Semitic languages. Landsberger identified the true nature of the

\textsuperscript{39} Cf. liš-šu-nim-ma...lid-din-... in YOS 3 81: 24...25 (letter, Cyr-Camb, U).
ventive in 1925, but Rimalt maintained that the Aramaic-imperfect and imperative endings were responsible for the continuation of -nim endings in NB (1932, p118), without acknowledging the existence of ventives. The above evidence for the survival of the ventive shows that its uses have not been influenced by Aramaic.

§5 The subjunctive

Examples of the subjunctive are given in the tables at the end of part 2. As in earlier phases of Akkadian, the subjunctive continues to be written in relative clauses and after subordinating conjunctions. However, it can only be seen clearly in the (non-ventive) singular and 1cpl forms of final weak verbs or predicative adjectives. It is also distinguished in the Gt (futurum exactum) of nadānu. (See note 2 at the end of c, above.) The one exception to the consistent use of the subjunctive occurs in the relative clause in the statements of debt accruing interest in the texts from Babylon, in which the indicative is often used instead.

For comments on the subjunctive in roots with a strong final consonant, see part 2.

---

40 "Der Ventif des Akkadischen", ZA 35 (1925), 113–123. The term “Ventif” was first coined by him on p113. Some scholars such as S. Langdon and Ebeling used the the term “allative”.

41 E.g. with leqū in: PN...šā ār-ka-tu, PN, il-qu-u “PN... who took the legacy of PN”, YOS 7 66: 4–5 (Cyr yr 7, U).

42 E.g. mala bašū.

43 Contrast: Ĺ-šā šā 10 GIN KŪ.BABBAR šā UR, RA i-rab-bu-ū “(regarding) an IOU for 10 shekels of silver, which is accruing interest”, TCL 13 144: 2 (nom, subj) (Cyr yr 9), and: (n silver) ša İTI ina muh-hi 1 ma-nē-e 1 GIN KŪ.BABBAR ina muh-hi-šū-nu i-rab-bi “(a debt of) n silver, which is growing at the rate of one shekel of silver against one mina per month (as interest) against them (i.e. the debtors)”, Nbn 314: 19 (yr 8).
Chapter V: Nominal forms

§1 Nouns and adjectives

a) The singular and plural of nominal forms

i) In singular nominal forms ending in a strong consonant there is a considerable variety of spellings of the final syllable, although Cu or (for the feminine) tu(,) endings continue to be most used. This variety of endings is caused by the loss of the final vowel, as exemplified by the following:¹

\[ \text{ina } u - \text{mu } \text{ina } \text{si-mit } \text{it-tall-ku-} \] “on the day they die”, YOS 7 17: 12 (Cyr yr 3, U)

\[ \text{si-zib...i-šab-ba-tu} \] “they will deliver...milk”, YOS 7 79: 14...15 (Cyr yr 8, U)

\[ \text{ku-pur} \] “bitumen”, VS 6 84: 5, 9, 15 (Nbn yr 12, B)

\[ \text{bu-qul } \text{us-ha-nu} \] “uproot the hops”, (2mpl ventive impv) CT 22 79: 20 (545–527, B)

\[ \text{pu-ut } \text{ma-šar-tu, šā ū-hi-in } \text{na-ši} \] “he is responsible for watching the green dates”, YOS 7 162: 9 10 (Camb yr 3, U)

Nominative and oblique forms are not differentiated except in the case of oblique msg nominal forms having a lcs possessive suffix, e.g. \((\text{ina}) \text{muhha} \) (see §4 c i, below 2). The loss of differentiation is best seen in the examples of final weak nouns (cf. verbs), of which the following examples are all oblique:

\[ \text{a-sur-ru-ú} \] “foundation”,³ YOS 7 2: 9 (U), BIN 1 118: 12 (U), VS 4 66: 10 (B), Dar 499: 9 (B) and elsewhere.

\[ \text{DUMU-ša } \text{ša } \text{UGU } \text{ti-} \text{lu-ú} \] “her son, who is on the breast” (i.e. a “babe in arms”), Nbn 832: 2, 9 (yr 15, B)

\[ \text{a-ka-} \text{lu } \text{bab-ba-nu-ú } \text{i-nam-din} \] “he is to give good food”, VS 6 104: 10 (Cyr yr 8, B)

\[ \text{a-na } * \text{babl-} \text{ba-nu-ú } \text{lid-din-nu-} \] “may they give at the good (exchange-) rate”, CT 22 148: 14 (letter, 545–527, B) cf. line 17.

\[ \text{ku-um } \text{šu-gar-ru-ú} \] “as a bonus”, Dar 378: 7 (yr 14, B)

¹ See also the Graeco-Babyloniaca texts for further evidence that final vowels in these cases were not pronounced. The fact that CVCCV spellings are more popular than CVCVC spellings is presumably due to conservative scribal habits, as discussed in part 2 sections §2 and §5.

² §4c also has examples of historically correct spellings of nudunnu with suffixes in Nbn 356.

³ The phrase is \( \text{ānu } \text{idanni } \text{baqta } \text{ša } \text{asurrdi/asurrē } \text{isabbat} \) “he is to keep the roof waterproofed and undertake the repairs to the foundation(s)” Plural citations are in ii, below.
qaq-qar..ka-sa-al û ka-lu-û...bi-in-na-nim-ma “give me flooded or salinated land...”, YOS 6 33: 4 (Nbn yr 3, U), cf. YOS 6 41: 10–12 and TCL 12 90: 22 (all from Unuk and written by the same scribe)

\textit{ina muh-hi} 1 ma-né-e... “against one mina...”, Camb 379: 7–8 (yr 7, B)

ul-tu É ka-re-e il-sum-ma “he ran from the storehouse...”, YOS 7 198: 17 (Camb yr 6, U)

PN ŠEŠ-šá mul-le-e a-na muh-hi-šá un-da-al-lu “PN his brother is to give (futurum exactum) compensation himself”, YOS 7 77: 6–7 (Cyr yr 8, U)\(^4\)

Although -û endings are common among oblique forms, -ê does not seem to be found in nominative forms:

\(\text{ina u}_4\text{-mu pa-tu-û ia-a-nu “there is no day off”, YOS 3 113: 25–26 (letter, early Cyr, U)}\)

\(\langle\text{or}\rangle\)

\(\text{\langle ina } u_4\text{-mu } \text{ú-du-û...mim-ma šá ár-ki u-de-e...it-ta-as-ba-tu...“if, in the future (any other) item...anything (coming) after the items (in question) are found...”\rangle, TCL 13 142: 7–12 (Cyr yr 7, U)}\)

ii) Plurals of nominal forms

The corpora contain very few examples of plural nouns which are not written in some way logographically.\(^5\) Most are written either fully with logograms (exx. ZU.LUM.MA, LU.ERIN.MES, DUMU.MEŠ) or syllabically, in the singular, with MEŠ or ME (exx. UDU.NITA.par-ra-tu 4.MEŠ, u-il-ti.ME).

The evidence indicates the following plural endings exist. There is no case distinction:\(^6\)

\(\text{mpl} -\text{ê} (-\text{ê}) -\text{ân}, -\text{ânê}; (-\text{ân}, -\text{ânê})\)

\(\text{fpl} -\text{ât}, -\text{êt}^7 (-\text{ât/-êt})\)

Examples:

LÜ.pa-qu-de-e “delegates”, BIN 1 169: 14 (B)

u-de-ê eš-nu-tu “items in good order”, Dar 280: 16 (yr 10, B)

LÜ.mu-sah-re-e “buying agents”, Stigers 36: 5 (U)

\(^4\) Apodosis of a conditional sentence introduced by \textit{ina Źm.} The text concerns PN bailing his brother out of detention on the condition that his brother keeps away from the alehouse. If his brother is found there PN has only himself to blame. See \textit{mulâ}, AHw p670f. CAD interprets it differently: “should PN be seen (again) in the tavern, his brother will give him his just deserts”, A/II \textit{mulâ} A p189f.

\(^5\) Singular forms are more often written syllabically.

\(^6\) Final weak endings, where attested, are given in parentheses.

\(^7\) The vowel change appears to be due to vowel harmony, as noted in Kuyunjik NB by Woodington (p61).
b) The construct

The construct survives mostly in frozen forms only, although a few examples of its productive use are noted:

ZAG A.ŠÂ.A.ME NÎ.G.GA 10 FDN u FDN.10 “tax on the fields belonging to the Lady-of-Uruk and Nana”, TCL 13 181: 5 (Dar yr 2, U)

The construct has largely been replaced by the periphrastic genitive using ša. For a full examination of the construct and the periphrastic genitive see “ša”, II §2 cc, above.

c) Participles and adjectival forms denoting an activity:

i) Not many examples of participles can be found in the texts under scrutiny here. Those that are used, are being used as nouns and are not productive as participles of a verb, with the possible exception of nādin.

(LÚ.) bātiq “denouncer, informer”, YOS 6 191: 1, 231: 1, 203: 1, 214: 1, TCL 12 106: 2 (all are Nbn texts from Uruk)

---

8 Sg nudunnû.
9 Cf. pi-iq-né-e-tú in TCL 12 90: 2, 8 (B). The singular is piqittu.
10 imit eqlēt makkûr.
LU.man-di-di “measurer”, YOS 3 113: 18, 22 (U), cf. TCL 13 182: 27 (U)

LU.na-di-na nu-dun-nu-ū “the giver of the dowry”, Nbn 1113: 27 (after yr 7, B)

Sometimes they occur in apposition to another noun:

su-pur PN na-din E “the nailprint of PN the seller of the house”, VS 5 38: 51 (Cyr yr 6, B) cf. the similar Camb 428: 22, TCL 13 190: 45 and Dar 26: 42 (all B)

[lu-ū] DUMU ša-bit ŠU.ii-i-ni ša-ū “let him be a son, our helping hand”, CTMMA 2 54+Nbn 380: 11 (yr 9, B)

(ana) 4GAŠAN a-šib-ti GN “(for) the Lady who dwells in Uruk”, YOS 6 71: 23 (Nbn yr 6, U)

Although D and Š participles are attested often in personal names (exx. mušallûm, mukīn, muballît, munâhhiš, musëtiq, musëzib) the following are the only ones found outside them, and again they are purely nominal:

mukīnunu “witness”, passim

musahhiru “buying agent, deputy”, YOS 7 70: 6, Stigers 36: 5, as a plural
LU.mu-sah-re-e (both U)

There are two examples of a Š participle:

PN...mu-še-ni-iq-qî-ti “PN the wet nurse”, BE 8 47: 1...2 (Nbn yr 5, B)

PN...LU.mu-sa-kti GU 4.MES sa LUGAL “PN...the feeder of the king’s oxen”, YOS 7 146: 10...11 (Camb yr 3, U)

ii) Other adjectival forms denoting performers of an activity

The particularising morpheme -ān(u) on a verbal root results in an adjective denoting a particular activity specific to a situation, such as stealing (in a particular situation) or serving:

LU.pa-qe-er-a-nu “claimant”, Nbn 293: 35 (B), cf. VS 5 38: 38 (B)

LU.ta-ba-(a)-la-nu “pilferer”, YOS 6 175: 3 (U), YOS 6 191: 4 (U)

lamūtânu, latânu “servants, retinue” is an NB term derived by von Soden from Aramaic /šwâ/ rather than lamû:\n
PN ū [šwâ] la-ru-û “PN and [šwâ, damaged? erased?] the servant”, CT 22 110: 6 (letter, 551–527, B)

MUNUS.la-ta-nu YOS 3 22: 16, YOS 6 246: 6 (both Nbn, U)

---

11 In AHw p540a lätānu is given as the feminine of lamūtânu.
nabalkattānu (blkt, N) is used passim in the Achaemenid texts in the Babylon corpus to mean “defaulter” in legal contracts:

The nominal form parrās,12 apart from being used passim for PNs derived from professions such as nappāhu, is otherwise found in only one text in the corpora, and once again with nominal value:

a-ki-i LU.ās-sā-bē-e šā ina GN...a-ša-bu “in keeping with the tenants who live in GN”, YOS 7 186: 6...7 (Camb yr 6, U) cf. also line 9.

d) Infinitives

Although infinitives have verbal function, morphologically they are nouns. They are mostly used with ana and ina as well as other prepositions and often as the regens in a periphrastic genitive. G, D and S forms are attested:

i) Roots with a strong final consonant:

na-da-nu šā TŪG.BAR.DUL...ia-a-nu “there was no giving of a kuṣītu garment”, YOS 6 71: 28...29 (Nbn yr 6, U)

i-na mu.ān-na y ŠE.BAR z ZULUM.MA...a-na na-da-a-ni a-na NīG.GA š-an-na UGU-šū iš-ku-nu “they imposed on him the giving of y barley and z dates to Eanna property per year”, TCL 13 182: 17–18 (Dar yr 2, U)

ina la qa-re-bi šā PN “in the absence of PN”, YOS 6 78: 9 (Nbn yr 4, U) cf. Liv 19: 6 (qē-re-bi) (B)13

a-di-i pa-ra-su tu-ša-kā-al-la “she is to nourish (the baby) until weaning time”, BE 8 47: 3–4 (Nbn yr 6, B)

PN a-na gu-ul-lu-bu i-na ma-ha-r DN ta-a-bi “PN is fit for (ritual) shaving before Kanisurra”, AnOr 8 48: 28 (Cyrl yr 5, U). See also line 20.

There are many instances of purī...infinitive...našā “to be responsible for...”:

PN pu-ut e-ter KŪ.BABBAR na-šī “PN is responsible for paying back the silver”, Cyr 177: 13–14 (yr 4, B) cf. Nbn 314: 14–16, VS 4 60: 13–14 (all B)

pu-us-su-nu a-na la ha-la-ku na-ša-a-ka “I am responsible for their not escaping”, YOS 7 70: 17 (Cyr yr 8, U)

12 Cf. the intensive or habitual adjectival parras (GAG §55 c23).
13 See CAD gerēbu 1d. p230a.
pu-ut tur-ra ša GIS.MA a-na GN PN ā PN₂ na-ša-ū “PN and PN₂ are responsible for returning the boat to Unuk”, AnOr 8 40: 6–8 (Cyr yr 3, U)

Babylon also regularly uses:

i-na ka-na-ku IM.DUB šu-a-ti “at the sealing of that tablet...”, TCL 13 190: 13 (Dar yr 12), cf. Nbn 293: 37, VS 5 74/75: 23

and i-na ša-ta-ri ša tup-pi MU.MEŠ “at the writing of that tablet”, Camb 349: 32, Dar 379: 70: 1PN... ša PN AD-šū rit-tu-ru ša ša-ša-ru ša LU.se-pi-ru iš-tu-ur “(regarding) 1PN... whose father PN had put the writing of an (Aramaic) scribe on her wrist”, AnOr 8 74: 3–4 (Camb yr 4, U)

and ina a-ša-bi ša PN “in the presence of PN”, VS 5 73: 20 (Dar yr 10, B)

The following two infinitives have replaced finite verbs in a hendiadys construction (II §1 iv, above):

üt-ša ma-ti-ma Ia sa-ha-ri-im-ma a-na UGU LU-ta šu-a-ta la ra-ga-mu...tup-pi iš-tu-tu-ri ma... “so that there would never be another claim made regarding those servants...they wrote a tablet...”, Nbn 668: 17...20 (yr 12, B)

ii) Final weak roots:

PN u PN₂ a-na UGU šu-li-i ša ZŪ.LUM.MA šu-up-ra. “contact PN and PN₂ about the shipping of the dates”, YOS 3 29: 8–13 (letter, Camb? U), cf.:

ina UGU (items) a-na šu-ša-ta-ta la la-qe-e GIS.SUB.BA.MEŠ...tup-pi iš-tu-tu-ri ma... “so there could be no change, 1PN made a written record...”, Cyr 337: 17 (yr 9, B)

e) Abstract nouns

As in earlier EB/EA, abstract nouns are formed by the addition of -ut(u), usually spelled x-ū-tu.¹⁵

LŪ.GU.GAL-ū-tu “canal inspectorship”, YOS 7 38: 5 (U)

IM.DUB DUMU-ū-tu “tablet of adoption”, AnOr 8 48: 17 (Cyr yr 5, U). See also lines 19 and 25.

LŪ.mu-kin-nu-tu “the giving of evidence”, YOS 6 108: 1 (U), Iraq 13: 18 (U), VS 5 57/58: 14 (B) and elsewhere, cf.:

a-na LŪ.mu-kin-nu-ū-tu ū Şe-ē-šē-ē-šē-bu “they will make sit to give evidence”, VS 6 175: 1 (Cyr yr 2, B). See also YOS 6 175: 1

¹⁴ i-na ka-na-ku-ka.
¹⁵ Most of the examples are logographic.
ra-sin-ū-tu “soaking”, YOS 7 79: 7 (U). See also line 1.

Lū.MU-ū-tu Lū.BAPPIR-ū-tu šā PN...a-na e-piš-nu-tu a-na PN, id-din pu-ut
Lū.MU-ū-tu Lū.BAPPIR-ū-tu...na-šī “(regarding) the baking and brewing
prebends which PN gave to PN, to do, 16 he is responsible for the baking and
brewing prebends”, VS 6 104: 1...10 (Cyr yr 8, B)

For other examples see YOS 6 108: 1, YOS 6 79: 16, YOS 7 162: 5 (all U).

f) Collectives are usually singular forms functioning as plurals:

amelūt “servants” 17

Lū.šī-ra-ku “širku”, 18 GCCI 2 103: 5 (U)

Kū.HLA bi-i-šā “bad fish”, YOS 7 90: 15 (Cyr yr 5, U)

For examples with adjectives see g, below. In the following the collective is
qualified by the msg participle i-pu-uš (for ĕpiš). The word order precludes a finite
or predicative (active stative) form:

Lū.RIG.MEŠ i-pu-uš dul-la šā ē-an-na “the širkus who do the work in Eanna”,
YOS 6 108: 5–6 (Nbn yr 8, U).

In this example the collective Lū.qaštu governs a fsg stative:

GIŠ.DA šā Lū.PAN.MEŠ...ina muh-hi šat-ra-tu “the ledger on which the bow-
fief men are recorded”, YOS 6 116: 8...9 (Nbn yr 10, U)

g) Adjectives

In the texts under scrutiny here, predicative verbal adjectives in subordinate clauses
are often found instead of attributive adjectives. However, those few examples that
do exist follow the patterns: 19

\[
\begin{array}{c|c|c|c|c}
\text{msg} & \text{mpl} & \text{fsg} & \text{mpl} & \text{fsg} \\
\hline
C, Cv; (−ū) & (−ūt; (−ūt) & −t & −āt, −ēt; (−ēt) \\
\end{array}
\]

(la-pa-ni) mu-ti-šū mah-ru-ū “ťy)her first husband”, CTMMA 2 54+Nbn 380: 6
(Nbn yr 9, B)

Ē ab-ta “ruined house”, Camb 423: 1 (B)

---

16 The word ĕpišănūtu specifically refers to the carrying out of prebendal duties.
17 The spellings are various: Lū-ū in Nbn 668: 5, 19 (B); a-me-lu-tu in JRAS 1926: 5 (B) and
YOS 6 219: 3 (U); a-me-lu-ut-tu, in Dar 379: 51 (B) etc. It can also be used as a singular, cf.: a-
me-lu-tu, šu-a-tu, “that servant” (referring to a male slave), VS 5 46: 7–8 (B).
18 In CAD S/III (širku A, p110) the problematic variant spellings of the plural of širku are
discussed. To me, the variant spellings such as ši-ra-ki, ši-ra-ku, ši-rak-ki.MEŠ and Lū.šiš.MEŠ-
ki suggest a plural *šīr and the variant *šīšk, or *širak, rather than *širakū.
19 Final weak endings are again given in parentheses.

148
5 GUR ŠE.BAR la-bi-nu “5 kur of old barley”, YOS 7 99: 1 (Camb acc, B)

6 MA.NA KU.BABBAR pe-sul-ú “six minas of white silver”, JAOS 36: 20–21 (letter, 538–532, U) (object case)

ŠEŠ-sú ra-bu-ú “his elder brother”, AnOr 8 48: 27 (U) (subject case)

u₂-mu pa-tu-ú ia-a-nu “there is no day off”, YOS 3 113: 25–26 (letter, U)

(ina UGU) KA-i mar-su “(because of) bad talk”, YOS 3 19: 23 (letter, U)

fsg

te-er-si-tu, ga-mir-tu, “everything needed”, VS 6 84: 6–7 (Nbn, B)

qal-lat-su-nu ša-hir-tu, “their female slave-child”, Nbn 693: 4 (B)

LÚ-tú ha-liq-tu “lost servant”, TCL 13 160: 13 (B)

j GÚ.UN [...] ši-bir-ti “half a talent...broken up”, TCL 13 190: 15 (Dar yr 12, B)

In the following it is unclear whether the adjectives are singular or plural. In the first, Miṣirêt may refer to 1PN only, and in the second, as it concerns a number, the qualifying adjective could be singular, cf. labīru, above. However, the spellings may simply be by-forms of the plural, i.e. Miṣirêt, Akkadēt babbanēt:

1PN...ù DUMU.MUNUS-sú...KUR.mi-šir-ti-tu, “1PN...and her (baby) daughter...Egyptians”, Camb 334: 3...4 (yr 6, B)

UDU.NITApar-ra-tu, MES a₄ 30 ak-ka-di-i-tu, bab-ba-ni-tu, “the (aforementioned) young sheep, thirty fine Akkadian (ones)”, Dar 297: 5–6 (yr 11, B)

mpl

UD.MES ma-du-ti “many days”, Nbn 1113: 17 (after yr 7, B)

GIŠ.ŪR a-ba-lu-tu, pe-ti-nu-tu “dry, sturdy logs”, Nbn 441: 5–6 (yr 10, B)

me-e har-pul-tu i-Šaq-qu “he will irrigate using early (flood) waters”, VS V 49: 8 (Camb yr 4, B)

u-de-e es-nu-tu i-nam-din “he will give the items back in good order”, Dar 280: 6–7 (yr 10, B)²¹

60 DUG.tan-nu-tu re-qi-tu “60 empty barrels”, Dar 395/396: 1 (yr 3, B)

1pał-ni ha-du-tu “happy face” (plurale tantum), JNES 1993: 7 (letter, Nbn yr 17? U)

[2 lahrur 1 U]DU ka-lum bal-tu-tu “two ewes and one yearling sheep, alive”, YOS 6 137: 18–19, also line 21 (Nbn, U)

---

²⁰ In reality the adjective applies to the 5 GUR, not the ŠE.BAR (=uṭṭetu). See §2, below (numbers).

LU.ERIN.MEŠ mi-tu-tu ab-ku-tu ʾu hal-qu-tu “deceased, abducted, or missing workers”, RA 11: 30–31, also 14–15 (letter, 533–532, U) cf. TCL 13 150: 1–2 ($\S$3a, below)

*re*-ha-a-nu mah-ru-tu “earlier remaining (debts)”, TCL 13 165: 13 (Camb yr 4, U)

fpl

SUM.SAR eš-še-tu “new garlic”, CT 22 81: 17 (letter, B)

qu-ru-bē-e-tu, “presented” (referring to two goats and a ewe), CT 22 82: 25 (letter, Dar, B)

e-lat ú-il-ti.MEŠ mah-re-e-tu “on top of superseding(?) earlier?) IOU’s”, Nbn 344: 9 (yr 9, B), cf. mah-re-e-tu, in AnOr 8 68: 13 (Camb yr 3, B) and VS 4 107: 6 (Dar yr 16? B).

Collectives take singular adjectives:

LU.a-me-lu-su-nu hal-liq-tu, “their missing servants”, Dar 379: 57 (yr 14, B)

KU,HLA bi-i-šu “bad fish”, YOS 7 90: 15 (Cyr yr 5, U)

D and Š adjectives are also attested:

KU,HLA nu-uh-hu “selected fish”, Nbn 293: 16 (B)

LU.qal-la-šu us-šu-ru “his marked slave”, Dar 492: 2 (yr 19, B)

1 U, mu-uš-šu-uš-tu, “one loose ewe”, TCL 13 134: 4 (Cyr yr 4, U)

GIŠIMMAR.MEŠ su-up-pu-hu-tu “scattered date palms”, Nbn 293: 1 (B)

LU.ERIN ŠU.II šu-ul-su-du-ā-tu “well-equipped$^{25}$ helpers”, TCL 13 150: 1–2 (Camb yr 2, U)

**Note:** there is one example of an adjective used as a predicate:

KŪ.BABBAR qa-al-la-al ša a-na ZULUM.MA in-na-din “the silver is too inferior$^{26}$ to be given for the dates”, CT 22 182: 6–8 (letter, pre-526, B)

---

$^{22}$ See AHw entries for šumu, “garlic”, which is sometimes treated as fpl. See also CAD eššu c, p375b, which has two NB entries in the plural, both written eš-še-e-tu.

$^{23}$ From rēhu D, i.e. “made to remain”. Von Soden (AHw p993b) notes that the idea of ruhu meaning “selected”, is based on the interpretation in CAD I, p164b (ippatu).

$^{24}$ To be contrasted with GIŠIMMAR.MEŠ sap-hu-tu in Camb 286: 1–2 (B).

$^{25}$ From šursādu “well-founded, established, fixed, solid, well-equipped”. See CAD Š/III pp364bf.

$^{26}$ See CAD (Q, p60) for the intensive adjective qallalu, “of poor quality”. See also VI §1 a, below. See the end of c, above for comments on the forms parrās, parras.
h) kilallē

LÚ.sá-tam šá ki-la-le-e a-t-ta “you are šatammu of both (temples)”, YOS 3 8: 29 (letter, early Dar? U)

i) gabbi and kalu

The invariable collective pronoun gabbi (virtually always spelled gab-bi)28 “all, everything”, has almost completely replaced the Common Semitic kalu. It is usually used in apposition to a noun and comes after that noun. It is therefore like an adjective but without agreement (cf. agā, §4 k, below). In the first example it is an independent pronoun:

LU.HUN.GA.MES ia-a-nu gab-bi a-na MN it-tal-ku∗ “there are no hired men. They all went away in Duzu”, YOS 3 69: 4–5 (letter, 539–526, U)

ZÚ.LUM.MA gab-bi ul ú-sá-az-ziz “the dates are all unregistered”, YOS 3 83: 8 (letter, end Cyr, U)29

A.SÁ gab-bi “all of the field”, VS 5 49: 2 (Camb yr 4, B)

ina ku-ta-al-li-ia PN u DUMU.MEŠ LÚ.si-si-i gab-bi uk-ti-il “he detained PN and all the horsemen behind my back”, CT 22 74: 8–10 (letter, middle Dar? B)

Note: There is just one example of kalu in these texts. Unlike gabbi, it functions as a noun in construct and is probably a frozen expression:

man-za-al-tu LÚ.ŠU.HA-ú-tu šá kal MU.AN.NA “(regarding) the fishing duty for the whole of the year”, YOS 7 12: 2 (Cyr yr 2, U)

Note: 27 The examples in CAD (kilallān a, d’, p354b and AHw, p475b) suggest kilallē is non-literary NB. The examples of NB kilallān and the feminine kilattān are from literary NB texts (CAD a, e’ p354b).

28 gab-ba in: SE.BAR a-na GIŠ.BAN-ia gab-ba la en₃-de-e-tu, al-la∗ n GUR “the barley yield for my farm-lease is not all estimated apart from n kur”, YOS 3 8: 7–9 (letter, early Dar? U).

29 Cf. line 16: mah-ru-tu šá ú-sá-az-zi-zu “the first ones which do get registered”, impersonal subject; see VI §2, below.
§2 Numbers

a) Cardinal numbers

For the most comprehensive analysis of numbers in NB see part one of Streck (1995). The material in my corpora, where not used by him, mostly support his findings. Numbers 1–10 have what Streck call Genuskongruenz, with 1+en for masc, 1+et for fem “one”, n-ta for fem and n for masc for 2–10, i.e. the expected polarity is absent. There is no evidence that the -ta ending is the logographic TA; rather it is a feminine complement. Streck, in his references to earlier discussions on the subject (§28, 23–26), finds that, as early as in 1904, Clay noted that it was a phonetic complement in numerals connected with feminine substantives (BE 10, p23, note to no. 6 line 1) and is therefore not the distributive TA (.AM):

i) ʾišṭēn, ῥišṭēt:

1+en GU₄ bi-i-ri šā ina lib-bi i-ma-al-la-ad-du “one/any male calf which may be born” Dar 257: 6 (yr 9, B)

PN...́PN ́ŠEŠ-šá ra-bu-ú šā iš-te-et AMA šu-nu “PN...PN, his elder brother, who are of one mother”, AnOr 8 48: 27 (Cyr yr 5, U)

ii) 2–10:

2-ta MU.AN.NA.MES “two years”, TCL 13 187: 9 (Dar yr 16, B)

2 ZAH ul-tu É EN-ia ad-di-ma “I planned two escapes from my owner’s house”, Nbn 1113: 17 (after yr 7, B)

PAP 3-ta a-me-lut ul-su “altogether, three servants of his”, Nbn 273: 4 (yr 7, B) cf. Nbn 760: 13 (5-ta a-me-lut-tu) and YOS 7 164: 4 (see iv, below). Contrast these with PAP 3 LU-tū šā PN “three servants of PN”, Nbn 832: 3 (yr 15, B)

a-na 5 LU.mu-sah-re-e...id-din “give...to the five assistants”, Stigers 36: 5–6 (Dar yr 12, U)

iii) Larger numbers:

1 ME ERÍN.MES “100 workers”, YOS 3 200: 45 (letter, early Camb, U)

30 ʾišṭēt is usually spelled 1+et, but note PN 1+et-tu, LU.a-me-lut-tu, “PN, one servant”, in Nbn 990: 9–10 (yr 16, B).
31 For nadū “to plan”, see CAD nadū 2h, 87b-88.
32 Assuming the infinitive, hašāqu.
ina MN 2 ME GU, ME ba-ab-tu, 4 ME GU, ME 50 LÚ, sa-bi LÚGI LÚLIBIR
LU, sa-har...a-na PN i-na-ad-di-nu-ma... “in Duzu he is to give 200 oxen, the
balance of the 400 oxen, 50 workers, the seniors (superiors?), elderly (and)
young...to PN...”, TCL 13 182: 20...22 (Dar yr 2, U)

12 LIM a-gur-nu AnOr 8 52: 9 (Cyr yr 6, U) (collective)

iv) Numbers in the expression of age:

DUMU ITI U, MEŠ “a month-old baby”, VS 5 35: 4 (Cyr yr 1, B)

DUMU.MUNUS-šú DUMU 3 ITI.MEŠ “her daughter, a three month-old baby”,
Camb 334: 3 (yr 6, B)

PN DUMU 5 MU.AN.NA.MEŠ ù PN, DUMU 4 MU PAP 2-ta LÚ-ut-ta-šu-nu
“PN, five years old, and PN, four. Altogether, two servants of theirs”, YOS 7
164: 2–4 (Camb yr 4, U)

PN MUNUS.qal-lat-su-nu ša-hir-tu, šá 6 MU.AN.NA.MEŠ-šú “PN, their little
slave girl, who is six years old”, Nbn 693: 3–5 (yr 13, B)

1 ANŠE sal-mu 6-ú “a six year-old black donkey”, Dar 550: 1 (yr 22, B)

1 GU, 4-ú šá PN 1 GU, 4-ú šá PN, “one four-year-old ox of PN, one four-year-
old ox of PN”, TCL 13 164: 2, 3 (Camb yr 4, U)

2-ú-tu u-qa-ti-ma “(any male calf) is to reach two years of age”,33 Dar 257: 7 (yr
9, B)

b) Ordinals

Only those for “one” and “two” are attested in the two corpora. See Streck §§ 46–
49, 59–61.

i) mahru/mahrušu “first,34 former, earlier35”:

É maš-ka-nu mah-ru-ú “former pledge property”, Nbn 344: 7 (yr 9, B), cf. Nbn
605: 7 É maš-ka-ni-šú mah-ru-ú “his former pledge property”

ina ITI ŠE IGI-ú “in the first Addaru”, VS 4 107: 5 (Dar yr 16? B) as
opposed to ITI ŠE ár-ku-ú, Dar 366: 22

e-lat 2 LIM li-bit-tu, mah-ri-tu, “(this is) in addition to 2000 earlier
bricks (collective)”, Nbn 256: 6–7 (yr 7, B)

ra-šu-tú IGI-ti “the earlier debit”, Camb 322: 16 (yr 1? B)

ina MU.AN.NA IGI-ti “in the first year”, TCL 13 182: 11, 14 (Dar yr 2, U)

33 See CAD šunu-štú, an untranslated hapax (Š/III, p314a). Contrast this with the older CAD
entry in qatú 4b “bring to an end/to bring to term”, translated “she is to bring to term a second
(calf)”. However, the spelling tu-ú-qa-ti-ma would be quite exceptional for tuqattima, so I
have interpreted šunu-štú as the state of being two years old.
34 Streck, §46, p59, cites three Nbn texts which use iššiū/iššét for “first”.
35 “Earlier” as opposed to arkiū.

153
ii) šanû/šanitu “second, other”:

MU-ša 2-ú “his second/other name”, TCL 13 193: 3 (Dar yr 16, B)

ina MU.AN.NA ša-â-ti “in the second year”, TCL 13 182: 19 (Dar yr 2, U)

c) There are different ways of writing the same fractions:

mi-šil MU (AN.NA) “middle of the year”, passim

<table>
<thead>
<tr>
<th>GIN</th>
<th>mi-šîl bit-qa KÛ.GI “half of a shekel (and) half of an eighth of a shekel of gold”, YOS 6 223: 8 (Nbn yr 12, U)</th>
</tr>
</thead>
</table>

UDU.NÎTA.ME ina UNUG KI šá al-la šá ina EDIN ma-a-du-’ u 1-ú ub-ba-lu “the sheep in Uruk which are not in the open are many and are fetching half (their normal price36)”, YOS 3 87: 25–27 (letter, 533–526, U). See also 17–18.

šal-šî HA.LA “third share”, YOS 6 33: 13 (Nbn yr 3, U), cf. YOS 6 67: 16 šal-šû HA.LA (Nbn yr 4, U)

3-šá ina in-bi ik-kal “he may consume one third of their fruit”, VS 5 49: 10 (Camb yr 4, B)

There is also a form šullultu, which according to Streck is used with thirds of shekels (see his two examples from Nbn, §57 p66f). Two further examples are given below, the second of which indicates that its use was not limited to shekels and that it had an anomalous plural šullultät:

ITI šul-lul-tû 1 GIN...PN a-na PN, i-nam-dîn “per month, PN is to give ḟ shekel to PN”, BE 8 47: 4...5 (Nbn yr 5, B)

ina ITI.MEŠ a, 8 šul-lul-ta-a-ta šî-zîb...i-ṣab-ba-tu “in the aforementioned 8 months, each will deliver one third share of milk”, YOS 7 79: 14...15 (Cyr yr 8, U)

3-ta 4-tû.ME ina SU.II PN...an-da-har “I received three quarter (-shekel) pieces37 from PN”, YOS 6 223: 9...10 (Nbn yr 12, U)

8 GIN 4-tû KÜ.BABBAR “8| shekels of silver”, AnOr 8 40: 3 (Cyr yr 3, U)

5-šû HA.LA ina e-bu-ru...ik-kal-ṣ “(...they) may consume a one fifth share of the harvest”, YOS 7 167: 11...12 (Camb yr 4, U)

ešrû “one tenth; tithe tax”:

10-ú nu-u-nu...ni-nam-dîn “we shall give one tenth of the fish...”, TCL 13 163: 17...18 (Camb yr 3, U)

36 As explained above in chapter I §2 b n31 p28, x n kasa p ubbal means “x is worth n silver” in NB.
37 rebit “quarter-shekel”. Streck §58, p67.
es-ru-ú  CT22 78: 17, 22, 33 (pre-526, B) cf. CT 22 8: 6 10-ú šá DN “the tithe of Nergal” (B).

$\frac{1}{24}$th of a shekel = giru

$\text{ina lib-bi } 6\| \, \text{Gin} \text{ gír-ú LÁ-} \text{ti} \, \text{“6 shekels minus } \frac{1}{24}\text{th therefrom”, AnOr 8 40: 9 (Cyr yr 3, U)}$

$8\| \, \text{Gin} \, \text{gír-ú KÚ.GI} \, \text{“8 shekels and } \frac{1}{24}\text{th of a shekel of gold”, YOS 6 223: 2 (Nbn yr 12, U)}$

$4\, \text{GUR} \, \text{ŠE.BAR} \, \text{ù gi-ra-a a-na PN...i-din} \, \text{“give PN four kur barley and } \frac{1}{24}\text{th of a shekel”, GCC II 130: 5...7 (Dar yr 22, U)}$

d) Approximative numbers

When two numbers are asyndetically juxtaposed and the first is smaller than the second, this generates the approximations “between x and y; x or y”. See Streck §10,p14:

$3\, 4\, \text{GIŠ [MÁ].MEŠ PAP.TA.ÀM 1 LÚ.<MÁ.>LAH, šu-pur-am-mu “there are three or four boats altogether, send one boatman”, YOS 3 45: 32–33 (letter, Cyr–Camb, U)}$

$20\, 30\, \text{GUR} \, \text{ina lib-bi a-na è GU, ME } \text{îin}^{-1} \text{-na}^{-2} \, \text{“give 20 or 30 kur therefrom, for the ox-shed”, YOS 3 113: 13–15 (letter, early Cyr, U)}$

$5\, \text{ME} \, 6\, \text{ME} \, \text{GUR} \, \text{ŠE.BAR “500 or 600 kur of barley”, YOS 3 52: 12 (letter, Cyr, U)}$

$1\, \text{LIM hu-sa-bi sa} \, \text{BAN BANMIN “they destroyed 1000 fronds of one or two BAN (in size)}$

$\text{ina lib-bi šá 1-šá 2-} \text{šá a-na muh-hi a-na EN-} \text{fa aq-bu-ú “because I have spoken once or twice to my Lord...”, TCL 9 132: 12–14 (letter, Nbn yrs 1–12, U)}$

“n-fold” in Uruk is 1+en n (Streck §68b, p72). This may be an influence of Aramaic:

$1+\text{en} \, 30\, \text{a-na} \, \text{FDN i-nam-din “he is to give 30-fold to the Lady-of-Uruk”, YOS 6 175: 8-9 (Nbn yr 12, U)}$; cf. TCL 13 147: 8, YOS 6 122:11 and passim in YOS 7 7, etc.

---

38 “Carob pip”, i.e. grammatically not a fraction.
39 This is discussed at the end of this section, in a larger extract.
40 The reading of BAN and BANMIN is not clear. The units of thickness may refer to qū. See RIA “Masse”, p483 and CAD qū B4 p290. If the units are units of qū (ȘILA), then BAN and BANMIN are 6 qū and 12 qū respectively. However, their actual size remains undetermined.
42 Some of these are given in adi (II §2, above).
EN 30 a-na FDN i-nam-din “he is to give thirty-fold to the Lady-of-Uruk”,
TCL 12 106: 11 (Nbn yr 12, U)

The Babylon texts use the standard Akkadian formula *adi* n.TA.ÂM “n-fold” in:

a-di 12.TA.ÂM i-ta-nap-pal “he will pay twelve-fold”, VS 5 38: 38 (Cyr yr 6, B)

e) The distributive adverbial ÂM, and *ištēnā*, “each (one), one each”

In Babylon ÂM is used in the following frozen legal phrase:

1+en ÂM (or a,?) See the following discussion) šá-ta-ni il-te-qu-ū “they each took a copy”, Nbn 243: 17–18 (yr 6), VS 5 39: 22–23 (Cyr yr 6)

and elsewhere, but with many variant spellings of *ištēnā*: 1+en-ta a, (or TA.ÂM?), 1+en-a-ta a, (or TA.ÂM?), 1+en-na-ta a, (or TA.ÂM?), 1+en-ni-ta-, 1+en-a-ta-ma, 1+en a, (or ÂM?), 1+en-a.TA.AN, and 1+en-a-ta. There is a problem in interpreting the (TA).ÂM/AN seen in some of these. Streck (§61, 69–70) interprets it as a determinative and reads the attendant words as variants of *ištēnā/ištēnū* whose endings are -a, -na, -na-a, -na-a-, -na-a- (§61f-h). 45 CAD (ištēnā, I/J p279a) alternates ÂM with a, spellings and proposes *ištēnā* as the reading for the variant spellings.

The variations suggest that scribes differ in their interpretations of *ištēnā/ištēnū* as to whether it contains the distributive (TA).ÂM or not. 46 The following examples may also be explained as a use of the distributive:

*um-ma* 1 SILA.ÂM ZULUM.MA a-na su-mu-ut-tu, lud-da-ās-ša-nu-tu û dul-lu lī-pu-šu-? “(I said) ‘let me give them one sīla of dates each as a *sumuttu*-ration for them to do the work’”, YOS 3 79: 9–11 (letter, 539–526, U)

3 4 GIS L.MA.LMES PAP.TA.ÂM 1 LU <.MA>.LAH, šū-pur-am-mu 1 GIŠ.MA ša pa-nî-ša ma-hīr lu-up-he-e-ma lud-daš-ša “there are three or four boats altogether, send one boatman and let me caulk and give to him (any) single boat that he fancies”, YOS 3 45: 32–35 (letter, Cyr-Camb, U)

---

43 Probably meant to be 1+en rather than *adi*.
44 There are no examples of this phrase in the Uruk corpus.
45 In §61g (p70) he gives examples of the rarer *ištēnū/a*, with the endings -ū and -nu-ū-ū’.
46 Since it is possible to interpret *ištēnā* as “each of the aforementioned...”, some scribes may have even considered that *ištēnā* involves the demonstrative ā, both in speaking and writing. Alternatively they may have thought the word was actually *ištēnātā(m)* (suggestion offered by J. A. Black).
§3 Pronouns, pronominal suffixes and demonstratives.

a) Independent personal pronouns (subject case)

These are the same as the copular (anaphoric, predicative) forms:

Since there are not many examples, rather than giving transcriptions, the citations are given in transliteration:

| 1c -a, -u-a, ū-a  | 1c -i-ni, -e-ni (-in, -en) (in? ūn?)

Examples (because they have more than one form, the 1cs forms are dealt with separately at the end):

- *ina pa-ni-ṣā* “at his disposal”, TCL 13 182: 23 (Dar yr 2, U)
- *ina IGI-ṣā* “at her disposal”, VS 4 66: 8, 12 (Cyr yr 8, B)
- *nu-dun-na-ṣā\textsuperscript{53} ta-ṣal-lim* “she will recoup her dowry”, Nbn 356: 38 (yr 9, B)
- *ū-il-tū šā PN ŠEŠ-ū-ka i-na pa-ai-ka ip-qī-du* “the IOU which PN, your (ms) brother entrusted to you”, TCL 13 181: 16 (Dar yr 2, U)
- *mi-na-a ina ITI l+et ši-pir-ta-ka ul am-mar* “why have I not seen a letter of yours (2ms) in a (whole) month”, CT 22 6: 41 (letter, Cyr? B)
- *dib-bi-ṣā-nu ni-iš-me-ma EŠ BAR-ṣā-nu ni-ip-nu-us* “let us hear their argument so that we can make a decision about them”, YOS 3 96: 16–19 (letter, 533–526, U)
- *Ē-su-nu* “their house”, VS 4 66: 5 (Cyr yr 8, B)
- *AŠA-ṣi-na* “their (f) field”, Nbn 359: 3 (yr 9, B)
- *šu-lum-ku-nu* “your well-being”, CT 22 9: 5 (letter, 554–527, B)

\textsuperscript{51} Reiner calls this the “subjoined case” (1966, p101).

\textsuperscript{52} Written with the more usual spellings where possible, and with the probable pronunciation in parentheses.

\textsuperscript{53} Unusual spelling. The usual spelling is *nu-dun-nu-ū*. Contrast this with *ku-um nu-dun-nē-e-ṣā* “instead of her dowry”, ibid.: 31. This is an indication that the two scribes Nadin and Nabu-šum-ishkun (patronymics lost), who wrote the document between them, could still use the historically correct forms of nouns (at least those with final long vowels). This was not the norm. See §1, above.
First person singular forms (subject case):

i) masculine:

mu-ta-a “my husband”, Nbn 356: 23 (yr 9, B)

LU.qal-la-a “my slave”, Dar 53: 6 (yr 2, B)

ik-ka-a ku-ru “my patience (literally, “mood”) is short”, YOS 3 69: 23 (letter, 539–526, U)

PN ŠEŠ-ú-a “PN my brother”, YOS 6 79: 14 (Nbn yr 5, U)

AD-ú-a “my father”, CT 22 182: 5, 1054 (letter, pre-527, B)

ŠE.NUMUN-ú-a “my arable land”, Cyr 337: 9 (yr 9, B)

DUMU-ú-a, AD-ú-a, DUMU-ú-a ra-bu-ú “my son, my father, my eldest son”, AnOr 8 47: 12, 13, 14 (Cyr yr 5, U)

nu-du-nu-ú-a šu-ú “he is my dowry”, TCL 13 179: 9 (Camb yr 3? U)

it-ta-hu-ú-a “by my side”, CT 22: 73: 5 (letter, B)

ii) feminine (subject and object cases):

DUMU ba-nu-ta-a la i-ši “I have no free status”, Nbn 1113: 19 (before yr 7, B)

se-bu-ta-a ak-ta-šad “I have achieved my wish”, CT 22 194: 8–9 (letter, 551–522? B)

fPN AMA-a “fPN my mother”, YOS 6 186: 4 (Nbn yr 7, U)

ši-pir-ta-a “my message”, YOS 3 21: 10, YOS 3 33: 11 (letters, Cyr–Camb; early Cyr, U)

DAM-a “my wife”, TCL 13 181: 11 (Dar yr 2, U)

MUNUS.qal-lat-a “my slave-woman”, AnOr 8 56: 10 (Cyr yr 7, U)

per-ta-a liš-ši “may he take my post”, CT 22 200: 15 (letter, Nbn? B)55

rit-ta-a iš-šu-ur “he inscribed my hand”, Roth: 27 (Cyr yr 9, U)

Plural with 1cs ending:

[rik]-sa-a-tu-u-a ta-mu-ra-a-ma “you (pl) saw my contracts”, TCL 12 122: 17 (Nbn yr 12, B)

---

54 Contrast with the five writings of AD-ia in the oblique cases: lines 2, 4, 15, 19, 22 in the same text.

55 Interpretation explained in I §2 d n48 (ana, prepositions).
iii) As in earlier Akkadian dialects, the first person suffix on genitive case singular nominal forms and prepositions is -ia\(^{56}\) in NB, even though the case endings have fallen out of use:

\[
\begin{align*}
& a-na \text{ PN } ma-ri-ia \text{ id-din } \text{“give to PN, my son”}, \text{ Nbn } 243: 4–5 \text{ (yr 6, B)} \\
& \text{NÍG.ŠID } šá \text{ SUK.HI-} ti-ia \text{ ep-šá-a-ma } \text{“do (2mpl impv) my rations account”}, \text{ YOS } 3 \text{ 64: 13–14 (letter, 538–534, U)} \\
& ul-tu É šú-tu-um-mu-ia \text{ “from my storehouse”}, \text{ YOS } 7 \text{ 42: 10 (Cyr yr 5, U)} \\
& ina pa-ni-ia, ina muh-hi-ia \text{ “before me, against me”}, \text{ passim} \\
& it-ti \text{ PN } mu-ti-ia \text{ “with PN, my husband”}, \text{ Nbn } 356: 11 \text{ (yr 9, B)} \\
& ina IM.DUB-ia \text{ “in my tablet”}, \text{ ibid.: 14 but note the unexplained ia-tá u PN mu-ti-ia (subject cases, lines 5, 20) for the expected a-na-ku u PN mu-ta-a “my husband and I”, cf. line 23: mu-ta-a šim-tu, ú-bil-ma “my husband passed away...” (literally, my husband, fate took him”)}
\end{align*}
\]

Of particular interest is CT 22 182 (letter, pre-527, B) which has the -ia suffixes for all the oblique forms.\(^{57}\)

Note: attū- is a pronominal particle on which personal suffixes are hung if a nominal form is not available. It is etymologically connected with the deictic particles Nun in Aramaic and 'iyā- in Arabic. All the attestations in the corpora are given below:

\[
\begin{align*}
& \text{UDU.NÍTA } ul \text{ at-tu-ù-a “the sheep was not mine”}, \text{ CT } 22 \text{ 82: 10 (letter, middle Dar?) B)} \\
& \text{ù at-tu-šá a-na ku-[me?]e}^{58} \text{ il-ta-par-ri “he has sent his own (sheep) instead”, ibid.: 28} \\
& 1+en \text{ LÜ.KIN.GL, A-ka at-tu-ka li-il-ki u li-ib-hi-is “may a messenger of your own go there and back”, Peek } 22: 32 \text{ (letter, Dar, B)} \text{ cf. CT } 22 \text{ 8: 7}^{59} \\
& at-tu-ù-a iš-šá-nu “they are mine”, \text{ CT } 22: 74: 10–11 \text{ (letter, middle Dar, B)} \\
& la at-tu-ku-nu šu-ù “it is not yours”, \text{ JAOS } 36: 26 \text{ (letter, 538–532, U)}
\end{align*}
\]

\(^{56}\) The one exception is probably an intended -ia: DN DN, šú-lum u TIN šá ŠEŠ-i liq-bu-ú “may Bel (and) Nabû decree the good health and life of my brother”, which is probably a scribal error in that it is preceded by IM PN a-na LUSÀTAM ŠEŠ-ia, YOS 3 19: 1–3 (letter, early Cyrus, U).

\(^{57}\) a-na ku-tal-la in line 18 probably has no suffix.

\(^{58}\) The me has been included by both Campbell Thompson and Ebeling, but even after collation I am still not convinced that it is there.

\(^{59}\) A difficult sentence where attuka is used predicatively. See chapter I §1 a, above.
d) Resumptive and proleptic suffixes

i) Resumptive suffixes. In these corpora resumptive suffixes are confined to relative clauses in which the relative particle (i.e. ša) referring to the subject (antecedent) is either the genitive or indirect object in its clause. For further details and examples see relative clauses, e.\(^6^0\)

\[\text{LÚ.DUMU.DU-i.MES šá i-na pa-ni-šá-nu PN...GIR AN.BAR ul-tu MURUB,šá a-na muh-hi PN₃...is-su-hu “(these are) the citizens in front of whom PN...drew an iron dagger from his belt against PN₃...”, TCL 12 117: 1...5 (Nbn yr 16, U)\]

ii) The proleptic suffix, often associated with NB, is hardly ever used outside of (single\(^6^1\) child-father relationships:

\[\text{PN A-su šá PN₁, PN DUMU-šá šá PN₂ “PN, son of PN₁”, passim}\]
\[\text{PN A-su šá PN “PN, son of PN”, Nbn 356: 2 (yr 9, B)\(^6^2\)}\]
\[\text{PN DUMU.MUNUS-su šá PN “PN, daughter of PN”, passim}\]
\[\text{PN DUMU.MUNUS.A.NI šá PN Nbn 65: 1 (yr 2, B)}\]

In the two corpora there is one example only of a proleptic suffix outside of these uses:

\[\text{PN MUNUS qal-lat-su šá PN “PN, the slave of PN”, Dar 163: 5–6 (yr 5, B)}\]

Discussion

Much has been written about the origins of the proleptic suffix. It is attested in Akkadian as early as OB but its popularity in NB is often blamed on Aramaic. A study of the texts copied by Strassmaier reveals that it reaches its maximum popularity after the beginning of Nebuchadnezzar. This is maintained until the time of Cambyses. In Darius texts it starts to be omitted. On examination of the material translated in BR 8/7 I find that the first occurrences of the proleptic suffix (always in filiation contexts only) appear early in the 7th C, but that only one generation is given.\(^6^3\)

\(^6^0\) There is one example where a name is resumed in order to ease comprehension of the following rather long-winded record:
\[\text{LÚ.DUMU.DÜMEŠ šá ina pa-ni-šá-nu PN...pu-ut PN₃...ina qa-ti PN₃...a-na [erasure*] e-ṭē-ru KU.BABBAR a-ki-i ú-il-ti šá PN₃ šá ina muh-hi PN₃...PN in a*-šu-ú “(these are) the citizens before whom PN has taken responsibility for PN₃...away from PN₃...for the paying of the silver in accordance with PN₃’s IOU owed by PN₃...”, Dar 502: 1...8 (yr 20, B). Collation of the erasure indicates the trace of an e, probably an attempt to fit e-ṭē-ru on the end of line 4.}
\(^6^1\) If there is more than one child they are introduced as A.MES or DUMU.MEŠ šá PN, e.g. YOS 6 221: 1–2 (Nbn yr 17, U).\(^6^2\) Identification of a person by using his mother’s name (matronymic) is unique in these texts.\(^6^3\) According to San Nicolò (BR 8/7 n1 p2f), it was rare to record more than just the ancestor in the second half of the 7th C. The father’s name began to be included when it became more important to distinguish people in economic texts as more people took part in legal activities.
§40⁶⁴ (Aššur-nādin-šumi yr 5 = 694, Dilbat) The proleptic suffix is used in about half of the cases in this text.

BRM I 32 §6 (Šamaš-šum-ukin yr 2 = 666, Dilbat) In this text the proleptic suffix is used in all cases bar two.

VS 4 5 §86 (Šamaš-šum-ukin yr 15 = 653, Babylon) The proleptic suffix is used in one case in this text.

BRM I 38 §22 (Šamaš-šum-ukin yr 20 = 648, Borsippa) The proleptic suffix is used in all but two cases in this text.

In the BR 8/7 texts the proleptic suffix followed by two generations (i.e. PN A/DUMU-šá šá PN₂ A/DUMU šá PN₃/FN or PN DUMU.MUNUS-su šá PN etc.) appears first with one example in TUM II/III 69 §70 (Npl yr 7 = 618, Borsippa). Further examples are:

TUM II/III = BE 8 8 §83 (Npl yr 8, B) The proleptic suffix is used in all bar one case.

Lutz II 2 §82 (Npl yr 10, U) The witnesses and scribe have two generations.

Detailed discussions with references on the subject are already given by Kaufman (131–132) and Huehnergard (1989, 227–229). They make the following points which may help our understanding of the origin of the proleptic suffix:

1) Examples of the proleptic suffix are extant from OB and OA onward, where it is rare and is said to emphasise and determine the nomen regens.

2) It is more frequent in peripheral texts, exx. Nuzi, Amama, Ugarit, unattested in MB, sporadic in MA, but is not noted in the languages adjacent to Akk, apart from the infinitive construct+noun in Phoenician.⁶⁵

3) Sumerian (Gudea, Ur III) has a literary construction called by Thomsen (§164, p91) “the anticipatory genitive”,⁶⁶ which is paralleled in the early Akk dialects after OAkk, and in MA by the construction ša N₁ N₂-šu (Huehnergard, 1989, p230 and

San Nicolò is unwilling to say that this need to be more specific is exclusively due to population increases, particularly in the towns (top, p3). I am sure that increasing urbanisation is a major factor and that more records would have had to be kept. Giving two generations also avoided ambiguities caused by those who had the same name as a grandfather or uncle. San Nicolò also notes that in Hellenistic Uruk the grandfather’s name was used in texts involving temple staff who came from a narrow circle of families.

⁶⁴ The § numbers are those of the BR 8/7 translations. §40 is Bohl, Orientalia Neerlandica (Leiden, 1948, 116ff.)

⁶⁵ See Garr’s pleonastic genitive (1985, p167), ṭakkum dunnum “so that the Danunians may dwell” (literally “for their dwelling, the Danunians”).

⁶⁶ E.g. lugal-la é-a-ni “of the king — his house” (her first example).
nn. 81-82). It is argued that this has an emphatic effect; that it indicates “topicalisation” of the rectum by bringing it before the regens.

4) Additional observations: The periphrastic genitive in OArab, according to Hug, is used only when the number, name or definiteness of the regens must be clearly represented (1993, 94-95). Garr gives two examples from Tell Fekheriye and three other examples (1985, p172). Given the rarity of the periphrastic genitive in OArab it is therefore no surprise to find the proleptic suffix unattested. The periphrastic genitive became rapidly commoner in Mesopotamian Aramaic, e.g. in Ahiqar.

In conclusion, it has to be said that no common thread can be seen running through the above points. I must agree with Kaufman and his view that the construction grew popular within Neo-Babylonian Akkadian itself, and was then copied by Aramaic. My reasons are: a) the proleptic suffix is “endemic” to Akkadian from OB onward, b) Aramaic does not seem to be the source, and c) the existence of the Sumerian anticipatory genitive is probably not a reason for the appearance of the proleptic suffix as the word order changes for the anticipatory genitive but not for the proleptic suffix. However, this does not explain the origin of either, or whether the appearance of one was inspired by the other, or whether both sprang up independently and at the same time. Since both constructions are unsimilar it is safest to assume that they both developed spontaneously within their respective languages. Although the proleptic suffix is noted in some of the other early Semitic languages, this is probably due to Akkadian influence.

e) Object (accusative) pronoun suffixes:

3m/fs -uṣ71 3mpl -ša-nu-tu/ti
-āš -uṣ-ša-nu-tu

67 I.e. the use of dy and a noun instead of the noun in construct. See II §2 above.
68 He is uncertain about one of the examples.
69 Reiner calls this the “object case” (1966, p101).
70 There is one probable example of an independent accusative pronoun in the corpora of this thesis: ia-a-šuṭ “me”, TCL 12 122: 13 (yr 12? U). The third person independent forms suafu, sūnutu etc. are discussed in i, below, since they function as demonstratives for nouns in the subject or object cases.
71 It will be seen that the loss of the final vowel in the short suffixes necessitates a vowel preceding the suffix, so that assimilations seen in earlier phases of Akkadian do not always take place. (Contrast iddinuš and idinsu/idissu for “he gave it” and “give it”, below.) This secondary development is discussed in §5.5, as it is an indication that NB was still a spoken language in the mid-sixth century.
-āš-šū (ventive)  
\(Cu-niš-šu-nu-tu\) (ventive) \(^72\)

\(-\text{in}-ni\) \(^73\)

Examples: \(^74\)

\(a-na\ \text{mah}-\text{ri}-\text{ku}-\text{nu} \ \text{ub-la-āš}\ \text{ES.BAR-a-ni} \ \text{šuk-na}\ "I have brought him before you. Make (a) decision (literally, "our decision") regarding us", Nbn 356: 28 (yr 9, B) (ventive)\)

\(\text{PN...ki-i} \ \text{id-di-nu-ūš}\ldots\text{RN} \ iš-mu-ū \ ik-te-ši "when PN gave it (the kusitu garment, fs), Nbk heard and held it back", YOS 6 71: 30-31 (Nbn, yr 6), cf. line 32.\)

\(\text{ir-šā-an-ni-ma} \ "\text{he wanted me}" \ Nbn 356: 3 (yr 9, B)\)

\(\text{ub-la-an-ni-ma} \ "\text{he brought me}" \ TCL 12 122: 10 (Nbn yr 12? B) (ventive)\)

\(\text{ia-a-tū[l [a-na]} \ ḇ \ \text{PN tu-šā-ab-hi-sa}-\text{in-ni} "(as for) me, you (2mpl) made me go back to the house of PN", ibid.: 12-13\)

\(\text{šu-pur-āš-šū-nu-tu} \ "\text{send them}" \ YOS 3 19: 34 (letter, early Cyr, U)\)

\(\text{PN iš-mē-e-šu-nu-ti-ma} \ "\text{PN complied with (literally, "heard") them}" \ VS 5 20: 10 (Nbn, yr 1, B)\)

\(\text{a-na} \ \text{ma-aš-sar-ti} \ ū-šā-az-zīz-šū-nu-tu \ "\text{they will install them to do the watch}" \ YOS 7 156: 12 (Camb yr 3, U)\)

\(\text{šu-śa-a-nu-uš-šū-nu-tu} \ "\text{make (2pl impv) them come out}" \ TCL 9 111: 10 (533-532, U) (ventive)\)

\(\text{šu-kun-ši-nē-e-tu} \ "\text{put them}" \ YOS 3 4: 12 (royal letter, 543-539, U)\)

\(\text{lēš-šū-nu-śi-ne-e-ti} \ "\text{let them bring it}" \ (sahlu, fpl), YOS 3 107: 17 (letter, early Camb, U) (ventive)\)

\(^72\) The spelling: \(\text{iq-bi-ū-niš-šu-nu-tu} \ "\text{they said to them}" \ GCCI 2 101: 7 (Cyr yr 4, U) is an archaism.

\(^73\) See GAG §84d and paradigm 12 n6 (p11*). This happens after plurals with -ū or -ā ending. According to Winckworth (1950, p69) this would be a development from \(išpurāni\) (ventive) and the dative or accusative suffix (he does not seem to imply which)-ni. The example given in TCL 12 122 suggests a rare use of \(\text{akin} \) as a glottal stop.

\(^74\) For the type: \(\text{PN...šā PN, a-na} \ \text{DUMU-ū-tu} \ il-qu-śi-ma} \ "(of) PN, whom PN; took for adoption..." \ VS 5 57/58: 6-8 (Barziya yr 1, B), see III §1 v, above (relative clauses).

\(^75\) See also the next example. These are very correct spellings. Presumably the spoken versions are \(šukaššinēt\) and \(lišša(\text{nu?})\ššinēt\) unless an extra vowel has developed which separates the suffix from the verb (cf. the comments in n71, above). See also part 2 §5 f, below.
kul-lu-ú-na-a-sú “they hold us back”, TCL 9 98: 5 (letter, 540? U)

Notes:

i) Variant spellings for “he gave it/him/her, he will give it/him/her”, or the imperative “give it/him/her” suggest a sound change in Uruk:

Imperatives:

i-din-su “give it”, YOS 7 102: 24 (Camb acc, U)

Finite forms:

i-nam-din-su “he is to give him”, YOS 7 1: 12 (Cyr acc, U)

it-ta-din-su “he then gave her”, YOS 6 79: 16 (Nbn yr 5, U)

i-nam-di-su “he is to give him”, AnOr 8 52: 16 (Cyr yr 6, U), YOS 6 191: 13 +YOS 6 214: 13 (Nbn yr 12, U)

However, the legal document from Babylon, Nbn 178: 28 (yr 4, not in this corpus) has id-di-is-su-nu-ti “he gave them”. CAD nadānu a 17’ (p45a) explains this as -nš- > -ss- > -s- an occasional occurrence.

ii) Ventives with suffixes can still be identified as ventives:

ki-ila i-tab-ka-as 1 MA.NA KU.BABBAR...j-flam-difl “if he does not bring him, he is to pay one mina of silver”, YOS 7 1: 12...14 (Cyr acc, U).

ki-i la i-tab-ku-ni-iš...KU.BABBAR i-nam-di-nu “if they do not bring him, they are to pay...silver”, YOS 6 230: 9...10 (Nbn yr 12, U)

iii) Because the loss of short final vowels has led to the pronunciation of the 3sg suffixes as -vš, when the suffix is followed by -ma the two are linked by -i-:

a-mur PN a-na EN-iā al-tap-ra EN li-bu-ku-šī-im-me ina ŠU.II-šš EN lit-pur-ru “look, I’ve sent PN to my Lord. May Sir take her and send her via him”, CT 22 183: 19–22 (letter, IMB, B)

a-na IGl-ia šu-pur-šš-šī-im-za “send (2ms) him to me”, YOS 3 19: 27–28 (letter, early Cyr, U)

The same development is seen in the following verb, which is actually a plural:

ina sa-šš-tu, iš-ba-ta-šim-ma a-na PN...id-di-nu-uš “they caught him in the act of burglary and gave him to PN”, AnOr 8 27: 3...4 (Nbn yr 12, U)
In both cases the consonant cluster which would have resulted from the \(-vš + -ma\) is resolved by adding \(-im\). Note also that the vowel of the suffix is coloured by the preceding vowel in the verb.\(^{76}\)

f) Indirect object (dative\(^{77}\)) pronouns

The independent forms are not well attested, having mostly been replaced by the equivalent subject pronoun forms. This is particularly obvious in the 1cs and they are therefore given alongside the suffixed forms with their most common spellings. For discussions on the ventive endings q.v.:

See Note, below, for suffixes on plural verbs.

---

76 As perhaps -ma is coloured to -me by the preceding -im in the first example.
77 Reiner calls this the "indirect object case" (1966, p101).
78 Which is also ventive when in the second and third persons. The ventive is normally used with verbs of motion and is therefore not used in the following: 1+er DUMU.MUNUS ú-lid-su “I bore him one daughter”, Nbn 356: 4 (yr 9, B).
79 Identical with the ventive. Only singular final weak verbs show this ending unequivocally.
80 i.e. ventive + ma.
Examples. Independent:

\[ a-na \text{ šá-a-šá i-} k\text{-}kul\text{-}lu-]' "as for it (referring to money for rations), they have used it up", JAOS 36: 19 (letter, 538–532, U)

KU.BABBAR a-na šá-a-šá u PN id-din-nu a-na "\[\text{bab}^{?1}\text{-}ba\text{-nu-ú} \text{lid-din-nu-}' "(any) money (that Sir) gives to him and PN, may (Sir) give it at the good (exchange-) rate", CT 22: 148: 11–15 (letter, 545–527, B)

\[ šu\text{-}lum ia-a-ší "all is well with me", YOS 3 2: 4 (royal letter, Nbn, U) cf.: \]

\[ šu\text{-}lum a-na-ku u a-na mam\text{-}ma ma-la it\text{-}ti\text{-}ia "all is well with me and all who are with me", CT 22 6: 5–6 (letter, Cyr? B) also CT 22 194: 6, CT 22 151: 5–7 \]

\[ ù šá ina pa\text{-}ni RN a-na-ku a-na LÜ.ER\text{IN.ME}...\text{sad-din-nu-an-ni} "and what you (2ms) gave to me for the workers at the time of Cyrus", YOS 3 45: 15...17 (letter, Cyr-Camb, U), cf. the similar: \]

\[ ù šá a-na-ku ina pa\text{-}ni RN a-na LÜ.ER\text{IN.ME}...\text{sad-di-flu a-mur} "and check what you gave to me in the time of Cyrus", YOS 3 81: 30...31 (letter, Cyr-Camb, U) \]

\[ u\text{-}il\text{-}ka šá ina UGU PN šá a-na-ka ta\text{-}ad-din-nu a-na-ka ŠE.BAR e-tir\text{-}ka "(regarding) PN's IOU which you gave to me, I myself will pay you for the grain", Dar 475: 9–12 (yr 18, B) \]

\[ ia-a-tu?1...bi\text{-}in\text{-}na\text{-}nim-ma "to me..., give (2mpl)”, TCL 13 182: 11..12 (Dar yr 2, U) \]

\[ en-na a-ni\text{-}ni iq\text{-}ta\text{-}ba\text{-}na-a-šú...a-ni\text{-}ni ul-tu lib\text{-}bi ul\text{-}te\text{-}lu-na-šú "now he has said to us...he has made us go out of there", YOS 3 200: 26...31 (letter, Camb yr 1? U) \]

It is interesting to note that according to Woodington (1982, 28–29), Kuyunjik NB adheres to the older yāši, nāši forms, and their replacement by the nominative anāku and anēni was yet to develop.

Suffixed:

\[ e-lat n šá...a-na-ku ad-da-aš-šú "on top of n which I myself gave to him”, YOS 7 7: 102, cf. line 108 (Cyr yr 1, U) \]

\[ a-qab-ba-aš-šú "I say to him”, YOS 3 17: 12 (letter, 533–526, U) \]

\[ PN iq\text{-}qab\text{-}ba\text{-}aš-a-šú "PN says to her”, TCL 13 179: 10–11 (hapax. Camb yr 3? U) \]

\[ ŠE.BAR a... PN u PN, i-da-har\text{-}in-ni “that barley, PN and PN, have received it from me”, Dar 296: 4–5 (yr 11, B)\textsuperscript{81} \]

\[ ni\text{-}iq\text{-}ta\text{-}ba-aš-šú-nu-tú “we said to them”, TCL 9 98: 8 (letter, 539–526, U) \]

\[ mi\text{-}nu-ú ki\text{-}i ina UGU\text{-}šú\text{-}nu EN i-šak-ka-na mu\text{-}hir\text{-}šú\text{-}nu-tu ù kap-du šu\text{-}pur\text{-}aš-\šú\text{-}nu-tú dul\text{-}lu li\text{-}pu\text{-}šú? “whatever (demands) Sir imposes on them get from \]

\[ \textsuperscript{81} \text{For } mahāru \text{ with } anā \text{ for the indirect object see } anā \text{ and the indirect or non direct object, VI §3a iii, below. For } imtahar > iddahar \text{ (hapax), see part 2 §4 iii, below.} \]
them and write to them quickly so that they can do the work”, YOS 3 17: 5-7 (letter, early Camb, U)

*ta-ad-da-âš-Ši-na-a-ti* “she gave to them”, VS 5 45/46: 12 (Camb yr 1, B)

*ša a-gab-ba-ku-nu-šā um-ma* “regarding what I said to you (2sg!)…”, YOS 3 33: 26 (letter, early Cyr, U)

*lib-ba-ku-nu lu-u ta-ab-ku-nu-ši* “may your heart be good for you”, YOS 3 2: 5-6 (royal letter, Nbn) cf. line 18

*LÜ.ERİN.ME ša...ū-kal-li-mu-ku-nu-ši* “the workmen I showed to you…”, YOS 7 70: 7 (Cyr yr 8, U)

*ša a-qab-ba-ku-nu-su um-ma* “regarding what I said to you (2sg!)…”, YOS 3 33: 26 (letter, early Cyr, U)

*li-ba-ku-nu lu-u ta-ab-ku-nu-si* “may your heart be good for you”, YOS 3 2: 5-6 (royal letter, Nbn) cf. line 18

Note that 2pl and 3pl verbs with dative suffixes are virtually always ventive.

*i-nam-di-nu-niš-Ši* “they will bring to him”, VS 6 84: 8, 11, 15 (Nbn yr 12, B)

*LÜ.Ši-ra-ku ša...id-di-nu-niš-Šu-nu-tu* “the širkuš whom...they gave to them…”, GCC 2 103: 8 (Camb acc, U)

*en-na a-ni-ni iq-ta-ba-na-a-šu...a-ni-ni ul-tu lib-bi ul-te-lu-na-šu* “now he has said to us...he has got us out of there”, YOS 3 200: 26...31 (letter, Camb yr 1? U)

Notes

1) Indications that the vowel in the 1cpl suffix was sometimes reduced (first ex.) or even completely suppressed (second ex.) are found in:

*mi-nam-ma ul ta-di-in-né-Ši-ma* “why didn’t you (2ms) give (them, fpl) to us?”, TCL 13 181: 16-17 (Dar yr 2, U)

*a-ni-ni ŞUK.HLA ă NIG.BA bi-in-na,-an-ši-ma ma-aš-sar-tu...ni-is-sur* “give us rations and provisions so that we can do a watch”, YOS 7 156: 6...10 (Camb yr 3, U)

---

82 Pleonastic 2sg suffix as well as the expected 2pl suffix.

83 An exception is *i-nam-din-nu-uš-Šu-nu-tu* “they are to give them”, TCL 157: 11 (Camb yr 3, U).

84 Both examples suggest the stress falls on the last syllable of the verb. See part 2 §5.
CAD has further examples s.v. bi (B, 216–217). It must not be discounted that the spellings with na-ši as opposed to na-a-ši also indicate a reduction or disappearance of å.

2) Another contraction is noted for nadānu. luddin+am+ka, iddin+am+šu become luddakka, iddaššu. CAD expresses it as syncope of iddin etc. before -aCC-, i.e. ventive sg + pronominal suffix:

\[\text{lu-ud-dak-kam-ma} \quad \text{“let me give to you”, Cyr 337: 12 (yr 9, B)}\]

\[\text{lu-d-da-š-ša-nu-tu} \quad \text{“let me give to them”, YOS 3 79: 10 (letter, 539–526, U), cf. the singular } \text{lu-d-da-š-ša, YOS 3 45: 35 (U)}\]

Other pronouns

2) mimma; ayyu, the indefinite pronouns “whatever, whichever”:

\[\text{mim-ma šá ina pa-ni EN-ia ba-nu-ú *EN li-pu-uš “whatever is pleasing to my Lord may Sir do”, YOS 3 8: 30–31 (letter, Dar yr 1?) U}\]

\[\text{u mim-ma šá KASKAL.II-ša-nu šá il-la-a “and anything (else) in their business venture that may come up...”, TCL 13 160: 13–14 (Camb yr 3, B)}\]

For other examples of mimma emphasising negation see I §5. mimma is often qualified with mala in verbal clauses.

There is only one example of ayyu, which is in the negated masculine plural ayyūtu:

\[\text{a-a-ú-tu ina li-bi ul i-mu-ur al-la 1 ME 21 LU.ERIN.MES “he did not see any of them apart from 121 workers”, RA 11: 11-13 (letter, 533–532, U)}\]

h) ram(a)niš; ram(a)nišun etc., “oneself; themselves”, etc. is commonly used in the idiom eli ramniš+ kunnū88 “to confess”, literally, “to convict oneself”:

\[\text{PN ü PN₂...iq-bu-ú e-li }\text{ram-l-ni-ša-nu u-kin-nu um-ma “PN and PN spoke, confessing as follows”, YOS 7 97: 10...12 (Camb acc, U), cf. the similar example in }\text{Iraq 13: 20 (U)}\]

\[\text{PN [x? erasure?] UGU }\text{ram-ni-ša u-kin um-ma “PN confessed as follows...”, YOS 7 78: 11–12 (Cyr yr 7, U), cf. the similar TCL 13 142: 3 (U)}\]

---

85 = ībina(mma) etc. bi-in-na-an-šim-ma in TUM 2–3 203: 6 is given by von Soden in GAG Erg. §42j.
86 \(\text{lib}[bi]ni\ lū šabānši “our hearts are very happy”}, ABL 349 r 13.
87 nadānu 1a 16' (ABL NB) and 17' (late NB) (N I, 44–45).
88 For further examples of this idiom see eli (II §2 k, above, prepositions). All bar one example come from Uruk.
Further uses:

1 AB.GAL  ú DUMU-ŠŠU ul-tu [erasure] šá NÍG.GA é-an-na a-na ra-ma-nsi-šu-nu ib-ba-ku “they took (historic present) a cow and her calf from out of the Eanna property for their own use”, YOS 7 79: 22–23 (Cyr yr 8, U)

a-ki-ú-il-ti mah-ri-tu, ul-tu ra-man-ni-ššu i-nam-din “he is to pay out of his own pocket according to the earlier IOU”, Nbn 600: 18–20 (yr 12, B)

i) mam(ma) “anyone”, with negative, “no one”:

en-na mam-ma ina LÚ.ERÍN.MEŠ šá ina GIŠ.DA šá RN RN, a-na muh-hi-ia šat-tar mam-ma ina ib-bi a-na mam-ma la ta-nam-din-² “now anyone from the workers who are recorded in the ledgers of Nbk and Nrgl as my responsibility, you are not to give anyone (resumptive) of them to anyone”, RA 11: 23–27 (letter, 533–532, U)

kap-du tê-en-ka ina ŠU.II mam-ma al-la-ku lu-uš-me “quickly send (2fs) me news via any courier”, CT 22 151: 16–17 (letter, early Nbn, B)

ina lib-bi ma-am la āš-pu-rak-ka “because of this I did not send you anybody”, Peek 22: 31 (letter, Dar, B)

it-ta-hu PN īz-zi-zà-ma šá mam-ma šá ŠE.BAR ina IGI-šu ab-ka-nim-ma a-na PN in-na-” “stand by PN and that anyone who has barley at his disposal bring (2pl) it and give it to PN “, CT 22 73: 12–14 (letter, Dar? B)

Demonstratives:89

j) Demonstratives with “Hier-Deixis”, “this, these”:

i) agá appears not to change according to number, gender or case at this stage of NB.90

lu-ú ū-i-du MN a-ga-a šá MU 15.KÁM ITTI! di-ir-ni “you do know that this Addaru for year 15th an intercalation”, YOS 3 115: 6–9 (royal letter, Nbn yr 15, U)

13 MU.MEŠ a-ga-a GIŠ hum-mu-tu NI.TUK KI-e...ni-iz-za-qap “it is 13 years since we planted the quick Dilmun date palms” (literally, “these 13 years”), YOS 3 200: 5...6 (letter, Camb yr 1? U)

SUM.SAR a-ga-a “this garlic”, (šumu may be plural or singular) CT 22 81: 20–21 (letter, Nbn? B)

---

89 I hesitate to call them demonstrative pronouns as most attestations in the corpora are adjectives. Those which are pronouns are given at the end of the entry for “Hier-Deixis”, as my corpora have no “Dort-Deixis” attestations. Woodington finds that four fifths of her attestations are adjectives (top, p43).

90 Woodington finds that more than three quarters of the demonstratives in her corpus consist of agá, annd and aganná. She also finds a fs form agát (sic) and plural forms agannútu (m) and agannénitu (f) (1982, 42–45). agá is probably an Aramaism, cf. hāk(ā) "that", attested in later Aramaic. See von Soden (1966, pp5f, no. 1).
ii) annû is attested in the singular m and f forms, as well as the plural form annûtu:

şâ da-ba-ba an-na-a in-nu-û “anyone who alters this statement”, YOS 7 17: 15–16 (Cyr yr 3, U), cf. Cyr 277: 16 (B) and:

şâ dib-bi an-nu-tu BAL-û “anyone who alters these statements”, Nbn 697: 19 (yr 13, B)

É.MEŠ ši-na-a-ta a-di u,šu an-na ina pa-ni-šû-nu “those houses (have been) at their disposal up to now” (literally, “this day”), AnOr 8 70: 9 (Camb yr 3, U)

ti sa GIS.BÁN an-ni-tû...la iz-zi-iz “he did not agree to this farm-lease (=sûtu)”, TCL 13 182: 6–7 (Dar yr 2, U)

iii) agâ and annû as demonstrative pronouns:

a-ga-a šâ a-qab-bak-ku-nu-šû “this is what I say to you”, YOS 3 33: 25–26 (letter, early Cyr, U)

al-la a-ga->-i “apart from this”, CT 22 182: 11 (letter, pre-526, B)91

an-nu-û É šâ PN “this is the house of PN”, VS 5 38: 12 (Cyr yr 6, B) and elsewhere in the šupêltu tablets from Babylon.

e-lat an-na-a “apart from this”, TCL 13 182: 23 (Dar yr 2, U), cf. the equivalent:

PN an-ni-[i] i-pu-ul um-ma... “PN answered this, thus”, Nbn 1113: 16–17 (after yr 7, B)

Observations

The msg form of annû has the variant annû, either by analogy with agâ, or by analogy with the Aramaic equivalent dëná. Discounting those examples which are similar, examples of agâ/annû are found in 8 Uruk texts and 8 Babylon texts in the corpora. Uruk has a clear preference for agâ and Babylon prefers annû. The figures for agâ/annû are Uruk 5/3, Babylon 2/6. Both forms are seen to function independently as well as adjectivally.

k) "Dort-Deixis", i.e. “that, those”. The forms ullû; ulla etc., (GAG §45, 2) are not attested.92 Instead, they appear to have been completely replaced by both the old pronominal adjective šuâti,93 which now functions as the main singular or plural

91 See GINBr p15 for spellings ending in -i or -â-. Woodington also finds them in Kuyunjik NB (p43f). This ending is also seen for adi là (q.v. subordinating conjunctions), but no satisfactory explanation has been found for these spellings, apart from that they suggest the addition of a new sound.

92 The NB in the Kuyunjik letters still uses ulla (ullû, sic. Woodington, p42). Woodington does note that both annû and ullû are being replaced by agâ and its variant forms. There is one survival of ulla in the adverb ahallâ (cahi+ulla “on the other side”) functioning as a preposition with periphrastic šâ: n SENUMUN-a-hi-ul-la-... šâ I, qâ-pâ-de-e “arable land apposite the Qapâde canal”, YOS 6 67: 4 (Nbn yr 4, U). The unusual spelling, rather than the expected a-hu-ul-la-a, cannot be explained.

93 This is not noted in the earlier NB of Woodington.
demonstrative adjective (m or f), i.e. “that, those (aforementioned)”, and sometimes by šunūtu and šināti for the masculine and feminine plurals:

\[ a-na~muh-hi~Â.B.GAL.MÊŠ~šú-a-ti \] “regarding those cattle”, YOS 7 7: 37 (Cyr yr 1, U)

Â.B.GAL šú-a-ti “that cow”, ibid., 47, 49

GI.MÊŠ šú-a-ti it-ti PN i-zu-uza-ma “he shared those area units (reeds) with PN...”, VS 5 39 8–9 (Cyr yr 6, B)

a-na~muh-hi a-me-lut-tu, šú-a-tu, “regarding that (male) servant”, VS 5 45/46: 7–8 (Camb yr 1, B)

É šú-a-ti šá~PN šú-á “that house is PN’s”, Dar 410: 9 (yr 15, B), cf. also lines 6 and 12

mim-ma~HA.LA šá~PN...i-na~LÚ-tá~šú-a-ti~ia-a-nu~LÚ<tt> šú-a-ti šá~PN, á~ŠÊŠ.MÊŠ ší-i “PN, has no share whatsoever in that servant. That (female) servant belongs to PN, and his brothers ”, Dar 551: 12...13 (yr 22, B)

Note the following unusual spellings, all from Babylon:

19 GÎN~KÜ.BABBAR~ina~ŠÂM~ŠÊ.NUMUN~šú-MA-a-ta~ik-li “he held back 19 shekels from the purchase price of that field”, VS 5 20: 11–12 (Nbn yr 1, B)

i-na~šá-ta-ri~tup-pi~MU.MÊŠ... “at the writing of that tablet...”, Camb 349: 32 (yr 6, B). A phrase often used to introduce the names of the witnesses to a legal case. Note tup-pi~HA.LA~šú-a-ti in Dar 379; 70 (yr 14, B). The spelling MU.MÊŠ comes about as a play on šunāti, the (fern) plural of the word for “name”, šumu (pronounced /šu:/) whose logogram is MU. (See the logograms appendix, §3 c.)

There are few examples of the plural forms. The document Dar 551 is particularly interesting in that it has both singular (given above) and plural forms:

mim-ma~NÎ.G.SÎD~šá~PN ir-šu-á~PN, á...ŠÊŠ.MÊŠ-šú-a-na~UGU~NÎ.G.SÎD~šá-nu-tu~i-te-lú-á~á~HA.LA~šá~PN, ŠÊŠ~AD-šá-nu~i-na~NÎ.G.SÎD~šá-nu-tu~ia-a-nu “any possessions94 that PN acquired, PN, (his son) and his brothers forfeited (any rights to) those possessions and PN, their father’s brother, has no share in those possessions”, 7–9 (yr 22, B)

É.MÊŠ ší-na-a-ta a-di u-mu an-na~ina~pa-ni-šú-nu “those houses have been at their disposal up to today”, AnOr 8 70: 9 (Camb yr 3, U), cf. also lines 16 and 22.

Note the exceptional:

KUS.hi-in-du~šá-a-šá~PN~la-IGI~PN,...iš-šú-á “PN took (subjunctive) that money bag away from PN,”, Nbn 1048: 5...7 (yr, 17, B)

---

94 Although NÎ.G.SÎD = nikkassû usually is understood to mean “accounts” in NB it can also mean “possessions”, cf. AHw;“Besitz”.
1) a and the Aramaic emphatic state

The appearance in NB of the particle a (written either a or a ’), which is not noted in Kuyunjik NB (Woodington, p332) has been thought to be due to the Aramaic emphatic -ā’. Its main use in the dialects under discussion here is for anaphora, i.e. to refer to something mentioned earlier. Although the uses are the same in Uruk and Babylon, Babylon has two ways of spelling it in these texts, as opposed to Uruk’s one, as will be noted below.

i) “the (aforementioned), this, that”, common to both dialects.

In Uruk:

re-he-et ZÜ.LUM.MA a, ni-im-šu-uh “we measured the rest of the (aforementioned) dates”, YOS 3 113: 19–20 (letter, early Cyr, U)

If the quantity of the item in question is given, the quantity always follows the a:

a-me-lut-ti a, 12-ta PN a-na ē-an-na i-la-x? “those (aforementioned) 12 servants, PN will bring up? to Eanna”, BIN 1 120: 13-14 (Nbn yr 3, U). See also line 12.

SE.BAR a, 1136 KUR... “the (aforementioned) barley, 1136 kur...”, YOS 6 78: 6 (Nbn, yr 4, U) 96

U, a, 1+et 1+en 30...e-li-nu-ša ip-ru-su...se-e-nu a, 30 a-di 1+et U, ša kak-kab-tu,...a-na FDN i-nam-di-nu “for that (aforementioned) one ewe, they made a thirty-fold charge against them (assume e-li-sha-nu). Those 30 sheep, along with the (original97) single ewe (marked) with a star...they are to give to the Lady-of-Uruk”, TCL 13 147: 8...16 (Camb, yr 1, U)

In three letters a is used with items being mentioned for the first time in their respective texts but which have evidently been referred to in earlier correspondence. In the first extract a qualifies an area of land familiar to the parties in question, presumably referred to in earlier transactions but not referred to previously in this document:

pu-ut bi-it-qu u ki-rik-tū šā I, LUGAL a-na ma-la ŠE.NUMUN ša FDN ša ina pa-ni-ša PN na-ši e-lat 1 ME a, à qaq-qar,MEŠ ša GN ša ina IGI PN, “PN is responsible for the repairs and regulation of the King’s Canal in regard to the arable land belonging to the Lady-of-Uruk that is in his charge. This is on top of the aforementioned (?)100 (kur) and the lands at GN which are in the charge of PN”, TCL 12 90: 19–21 (Nbn yr 7, U)

95 See discussion below. See GAG §63g: “suffigierte aramäische bestimmte Artikel -ā (sog. Status emphaticus)” -re also §192b. The subject is not covered by Kaufman but he feels that the loss of the Aramaic status emphaticus and the rare use of the indeterminate state may be as a result of the influence of Akkadian’s three states, as it then mimics them (1974, p134).
97 ša ina ŠU.II ša-nu am-ra-tu, “who had been discovered in their possession”, line 15.
SE.BAR a, 5 ME GUR “the (aforementioned) 500 kur of barley”, TCL 9 98: 6 (letter, 540? U)

a-na UGU ŠUK.HI.A a, la ta-še-el-lu “regarding the (aforementioned) rations, do not be lax”, YOS 3 45: 20–21 (letter, Cyr–Camb, U)

KÜ.BABBAR a, 5 MA.NA...šá a-na EN-ia šaš-pu-lu “(regarding) that (aforementioned) five minas of silver I sent to Sir”, ibid.: 26...27

In Babylon it is used in the standard phrase referring to items pledged as security to pay off a debt (first two examples):98

LÛ.TUK-û ša-nam-ma ina muh-hi ul i-šal-lat a-di muh-hi šá PN KÜ.BABBAR a, 2 MA.NA l| GIN in-né-ter-ru “no other creditor may lay claim until PN is repaid his (aforementioned) 2 minas l| shekels of silver”, Nbn 314: 9–11 (yr 8, B)

LÛ.TUK-û ša-nam-ma ina muh-hi ul i-šal-lat a-di-i UGU šá PN KÜ.BABBAR-šá a, 45 MA.NA...i-šal-li-mu “no other creditor may lay claim until PN receives his (aforementioned)99 45 minas of silver”, TCL 13 193: 14...17 (Dar, yr 16, B), which continues:

ki-i ina MN KÜ.BABBAR a, 45 MA.NA...la it-tan-nu...(8 slaves+property) É maš-ka-nu šá PN ki-i ŠÁM ha-ri-is ku-un KÜ.BABBAR a, 45 MA.NA...pa-ni PN id-dag-gal “if he (the debtor) does not give that 45 minas of silver in Simânu, (...the eight slaves +property), PN’s security, will belong to PN at a rearranged price instead of the the 45 minas”, ibid.: 17...24

Note the spelling of a in the following:

ina KÜ.BABBAR a „1 MA.NA šá nu-dun-né-e “out of that (aforementioned) one mina of silver of the dowry”, Nbn 243: 13 (yr 6, B)

KÜ.BABBAR a „1 MA.NA PN a-na PN, i-nam-din “that (aforementioned) silver, 1| minas, PN is to give to PN”, TCL 12 88 (Nbn yr 8, B)

ina MN ZÛLUM.MA a „7 GUR DÎS BÂN ina SAG.DU-ša-nu i-nam-din “in Tašritu he is to give the (aforementioned) 7 kur 1 (pânu) and 1 sütu of dates in their original quantity”, AnOr 8 68: 4–6 (Camb yr 3, B)

ii) In reference to time: “this year, month, day; the (aforementioned) year, month, day in question”:

SE.BAR šá MU.AN.NA a, i-re-šū it-ti-šū EN lu-šá-az-ziz “all the barley that he is cultivating this year, may Sir register it with him”, YOS 3 107: 6–7 (letter, Camb pre-526, U)

ina ITIMEŠ a, 8 šul-lul-ta-a-ta ši-zib...i-šab-ba-tu “in those (aforementioned) eight months (split into) thirds they are to do the milking”,100 YOS 7 79: 14...15 (Cyr yr 8, U)

a-di UGU u₄-mu a, “up to today”, YOS 3 19: 6 (letter, early Cyr, U)

98 Further examples are given in I §6, above ( negation ). The one example from Uruk: LUGAL-û ša-nam-ma a-na muh-hi ul i-šal-lat is in YOS 6 90: 16–17 (Nbn yr 7).

99 See iii, below for a applied to nouns which have a suffix.

100 Referring to three men sharing: i.e. they work for two months and 20 days each.
It is noticeable that Babylon uses not only a, but also a’. There is no difference in meaning implied, as indicated in the following:

a-na KASKAL II mim-ma ma-la ina URU u EDIN ina muh-hi ZÜ.LUM.MA a’ 1 ME GUR u ŠE.BAR a, 50 GUR ip-pu-uš-su-’ PN u PN, a-ha-ta šú-nu “regarding the business venture, whatever they make out of their (aforementioned) 100 kur dates and 50 kur of barley, either in the city or out in the country, they are to share and share alike”, Dar 395/396: 5–8 (yr 3)

The other texts which intermix a, and › are: Nbn 243: 13, 17 (both examples given above), TCL 13 144: 6–8, (ZÜ.LUM.MA a’, ZÍZ.ÁM a’) and line 9 ([…] KÚ. BABBAR a). The same scribe is responsible for the duplicates Dar 319 and 76-11-17 172, and on line 6 of each he has KÚ.BABBAR a, 3 MA.NA and KÚ. BABBAR a’ 3 MA.NA respectively.

Of 19 texts 8 use a’. 4 texts use both a’ and a.

iii) a with nouns qualified by suffixes or adjectives. As the particle does not come between its referent and the suffix, this is the evidence which indicates that it is a separate word:

LÜ.ÉRÍN.MEŠ-ia a, 100 “my (aforementioned) 100 workers”, YOS 3 106: 28 (letter, Cyr–Camb, U)

LÜ.R.MEŠ-ka a, 4EN lip-tu-ra-ma liš-pur-ás-šu-nu-tu “those slaves of yours, may Sir release and send them”, YOS 3 8: 31–32 (letter, beginning Dar? U)\textsuperscript{102}

a-di PN KÚ.BABBAR-šá a’ 1 MA.NA i-šal-lim “until PN is repaid his (aforementioned) 1 1 minas of silver”, Cyr 177: 9–10 (yr 4, B), cf. TCL 13 193: 15–16, quoted above.

ŠE.BAR a, 5 GUR pe-ši-ti gam-mir-ti “the (aforementioned) five kur of white, ripe barley”, YOS 7 99: 5–6 (Camb acc, B)

UDU.NITÁ par-ra-tu, MEŠ a, 30 ak-ka-di-i-tu bab-ba-ni-tu, “the (aforementioned) 30 fine Akkadian\textsuperscript{103} yearling lambs”, Dar 297: 5–6 (yr 11, B)

iv) a as a copula. If a were to come before its referent, it and its referent would then assume subject-predicate status, cf.: an-nu-u É šá PN “this is the house of PN”, VS 5 38: 12 (Cyr yr 6, B). There are no attestations of this use of a, but the

---

\textsuperscript{101} There are no examples in the corpora of a qualifying a noun which has an adjective. I assume that a would follow the adjective, cf. É ép-šu an-nu-ú (“this building plot”), VS 5 38: 18 (Cyr yr 6, B).

\textsuperscript{102} Line 9 of this letter has al-la-, which is mistakenly read alla ÂM in CAD A II. (p18).

\textsuperscript{103} If the lambs are taken as a collective, this would explain the sg adjectival forms. Contrast this with tan-nu-tu a, 10 re-qu-tu la-bi-ru-tu “the 10 (aforementioned) empty old barrels”, VS 6 111: 7–9 (Camb yr 3, Borsippa). However, a case can be made for the adjectives being plural. See §1 g, above.
following may be understood by taking Ḃ as a copula, with ina tēmeka as the predicate:

\[
\text{kī-i at-ta ta-at-tal-ku ina tē-me-ka } a_{t} \quad \text{“if you go, that is up to you”, YOS 3 69: 25–27 (letter, 539–526, U)}
\]

Discussion

These texts show that, since it can come after the suffix, the Ḃ particle is not attached to its referent object, and, judging by the last example, may even function as an independent pronoun. Although the origins of the Ḃ particle may be seen in the Aramaic emphatic/determinative ending on singular nominal forms, NB Ḃ does not change when its referent is in the plural. It appears that the earliest appearance of Ḃ as a demonstrative\(^{104}\) occurs during the reign of Nbk,\(^{105}\) at which point it still imitates the Aramaic emphatic suffix. The three earliest instances of it that I can find are in:

- ŠE.BAR a₄ 8 GUR “the (aforementioned) 8 kur of barley” (mentioned previously in line 1), Nbk 66: 7 (yr 8, Sihiru, near to Babylon? 598 B.C.)
- KŪ.BABBAR a₄ 4 MA.NA “the (aforementioned) 4 minas of silver” (mentioned in line 1), Nbk 91: 9 (yr 11, B, 594)
- PN...pu-ut qa₂-qa₂ a₄ 1 ME na-si “PN...is responsible for the (aforementioned) 100 kur of land” (referring to land described in lines 4–5, AnOr 9 7: 44 (yr 13 Nbk, Uruk, 592)

By the time of Nbn and later, Ḃ has become far commoner than any of the demonstratives. By this time it has also diverged from the Aramaic in that it can be used as a demonstrative adjective separate from its referent noun, and even as a pronoun.

v) Ḃ is surely a separate development from the distributive adverbial “...each, apiece”, logographic ÂM, TA.ÂM (Hyatt, 52–54), cf. išēnā “each one, one each” (CAD I, p279a). See the discussion in §2, above (numbers).

---

104 As apposed to ÂM, the distributive. See v, below.
105 Hyatt does not find Ḃ in his texts (range of dates 1170–605). See orthography (part 2 §1).
Chapter VI: Other topics

§1 Comparative and intensive forms of nouns and verbs

a) Nominal forms. As in the other Akkadian dialects, the comparative is morphologically identical to the adjective:

(man-nu) šá qer-bi i-tir “(whoever) is nearer, pays”, Camb 68: 16 (yr 1, B) and passim.

The intensive adjectival form *parras* is attested only once in the corpora, as is the elative-intensive *šupras*:

KU.BABBAR qa-al-la-al šá a-na ZU.LUM.MA in-na-din “the silver is too inferior\(^1\) to be given for the dates”, CT 22 182: 6-8 (letter, pre-526, B)

LU.ERIN ŠU.II šú-ul-su-du-á-tu “well-equipped helpers”, TCL 13 150: 1-2 (Camb yr 2, U)

b) Verbal forms To say that x is more (as an amount) than y, the texts followed by either *etéqu* or *atáru*. For “x is less than y”, *alla + maṭû* is used:

| GIN KU.BABBAR ku-un a-hi HALA-šá-nu ina 8 nik-kás GI.MEŠ šá E...al-la TUR...at-ru PN a-na PN, u PN, it-tan-nu “(referring to the equal division of a house and a barn between four people) PN and PN, are to give \(\text{sic, presumably "mina"}\) of silver as part of their share, for the 8 reed-units by which (the size of) the house...exceeds (the size of) the barn..., to PN, and PN, YOS 6 114: 19...21 (Nbn yr 5, U)

ZU.LUM.MA ma-la al-la GIŠ.SU G[UR] it-ti-ru-un-nu PN [xx] ZU.LUM.MA ma-la al-la GIŠ.SU GUR i-ma-at-[tu-á?] PN a-na PN,...[i]-nam-din “(any) dates exceeding the 60 kur (needed to pay off a debt), PN [may have?], (Any) dates less\(^2\) than the (required) 60 kur, PN is to give to PN,...”, Dar 494: 12...16 (yr 19, B) cf. YOS 7 90: 15-18 (U)

See *alla* in prepositions (II §2, above), for further examples. There is no evidence of D and S forms being used specifically to convey plurality or intensity.

---

\(^1\) Literally, “the silver is inferior, that it can be given for the dates”. See CAD (Q, p60) for *qallalu* adj., “of poor quality”.

\(^2\) For *al-la + maṭû* see CAD maṭû 1b p432a. Several NB examples are given.

§2 Impersonal subject

The impersonal subject is used as a circumlocution for the passive (GAG §75i). As in earlier Akkadian dialects the 3mpl active is often used, cf. English, "they say that...", with the "they" not referring back to any definitely identifiable subject. As the examples below indicate, the action of the verb is emphasised in a way that cannot always be conveyed by a predicative verbal adjective. All but one of the examples come from Uruk:

\[\text{sa} 1 \text{SILA ZULUM.MA a-na 1 GIN KU.BABBAR ina GN iq-ta-bu-na-a-šū KILLAM ul ni-fp-pu-uš a-kan-na 2 PI ŠE.BAR u 2 PI ZULUM.MA a-na 1 GIN KU.BABBAR...i-qab-bu-ū "they've told us one sīla of dates is one shekel in Uruk, so we didn't make a purchase. Here, they say two sūtu of barley or two sūtu of dates is one shekel...", YOS 3 79: 22...27 (letter, 539–526, U)}\]

\[\text{sah-le-e šā GARIN...iq-ta-bu-ū-nu um-ma ina ĖL U.GAR UMUS na-da-a, šu-pur-ma li-iš-šā-nu-sī-nē-e-tī "(about) the cress from the...wetland, that they've said is deposited (3fpl) in the šākin tēmi's house, send word so they (impersonal) can bring it", YOS 3 107: 11...18 (letter, early Camb? U)}\]

\[\text{ri-ka-su šā ĹR-ū-tu šā PN...iš-tas-su-ū-ma "the contract giving the slave status of PN...was read out", Nbn 1113: 8...14 (after yr 7, B)}\]

Other examples are AnOr 8 27: 18 (U), AnOr 8 38: 8, and in the difficult YOS 3 66: 6:

\[\text{a-na muh-hi u-mu a, GIŠ.MĀ šā ZI.DA ul ū-šē-ri-iq Ė ZI.DA qa-ti i-qab-bu-ū-nu um-ma a-na muh-hi šā LU.ma-gu-šū il-la-kām-ma Ė ZI.DA i-her-ri mam-ma ZI.DA a-na lib-bi ul i-de-ek-ki "up to this day the flour boat has not been emptied. The flour house is finished. They say, until (? because?) the magus comes and digs/ examines (?3) the flour house, no one is to remove the flour in it", YOS 3 66: 3–9 (letter, early Camb-pre-526? U)}\]

The spelling of ū-šē-ri-iq as a 3ms (ušriq) is problematic as VC finals are very rare for 3mpl finite forms. This happens in the following example also:

\[\text{ZU.LUM.MA gab-bi ul ū-šā-az-zīz “the dates are all unregistered”, YOS 3 83: 8 (letter, end Cyr, U). Contrast:}

\[\text{mah-ru-tu šā ū-šā-az-zi-zu... “the first ones which do get registered...”, ibid.: 16.}\]

In both of these cases the subject could be 1cs. The following two examples also pose a problem since the forms of šālu that are used are difficult. The first one appears to be a passive but with a 3mpl ending added for good measure. Although the second one is probably a passive it is included for comparison:

---

3 GINBr derives this from herā “to dig”. CAD has “because of the fact that the magus was supposed to come in order to check on the flour storage”, deriving it from ĕhrū “to examine” (māgušu, p48bf). It is not referred to in AHw. The spelling suggests ĕhrū but the use of ana libbi rather than ina libbi suggests the flour is already there, making digging inappropriate.

4 šālu N is very rare; AHw p1151b believes both of these examples are 3mpl G.
PN iš-ša-al-ú-ma iq-bi... “PN was questioned and said...” AnOr 8 47: 18 (Cyr yr 5, U)

PN PN₂ u PN₃ iš-ša-al-la⁵ um-ma... “PN, PN₂ and PN₃ were asked(?) as follows...”, TCL 13 170: 14...16 (Camb yr 5, U)

§3 ana and the indirect, non-direct object or as a nota accusativi

a) ana and the indirect or non-direct object.⁶ With verbs of giving, consecration, showing etc., i.e. verbs which demand a donor/agent (subject, in the nominative) as well as a recipient/experiencer (indirect object, in the dative), ana is used for the recipient/experiencer in earlier dialects of Akkadian. This usage is observed in the NB here, but with notable additions (ii and iii, below):

i) ana as the indirect object of verbs of giving, consecration, etc.:

| PN LŪ.ta-ba-la-a-nu...KU.GI SA...a-na PN₁...a-na KU.BABBAR id-di-nu “PN the pilferer...gave red gold...to PN₁...for silver”, YOS 6 175: 3...5 (Nbn yr 12, U) |
| mam-ma ina lib-bi a-na mam-ma la ta-nam-din- “do not give (mpl) anyone therefrom to anybody”, RA 11: 26-27 (letter, 533–532, U) |
| e-pu-us NIG.SID ša KU.BABBAR ša KASKAL.II ša PN...a-na PN₁...id-di-nu-ma... PN₂...a-fla PN₁...it-d’in- “(regarding) the doing of the accounts for the silver from the business venture which PN passed to PN₁ and (which) PN₂...and PN₁...carried out together...”, TCL 13 160: 1...4 (Camb yr 3, B) |
| a-na FDN ú-zak-ku-ša “he consecrated him to the Lady-of-Uruk”, YOS 6 224: 23–24 (Nbn yr 15, U) |
| u-de-e...ša PN...UGU ram-ni-ša u-kin-nu...a-na PN...ù PN₁ ú-kal-li-mu “items...which PN...confessed about...(and) showed to PN and PN₁”, TCL 13 142: 1...6 (Cyr yr 7, U). See also lines 9–11. |

With some verbs, for example speaking and sending (messages),⁷ the direct object is not given (although it may be implied):

| PN...a-na PN₁ iq-bi um-ma... “PN...spoke to PN₁ as follows...”, YOS 19 110: 1...4 (Nbn yr 15, U) |
| a-na PN EN li-iš-pu-ru “may Sir write to PN”, CT 22 200: 11–12 (letter, Nbn? B). The direct object, being the message itself, is understood, cf.: |

---

⁵ This word begins line 16 and is indented in the line.
⁶ I make the distinction between indirect and non-direct object in that the verbs in category i generally do need a recipient/experiencer. The verbs in the other categories are transitive but do not necessarily have to have a recipient/experiencer. If they do have one I prefer to use the term “non-direct object” to show that there is a difference.
⁷ Using the verb šāarû to mean “to write”. šāarû refers to the act of writing something and not the act of writing to someone, from OB onwards, according to CAD.
a-na PN a-na muh-hi a-šap-par “I am writing to PN about it”, RA 11: 16–18 (letter, 533–532, U)

In the above uses of ana, its prepositional, directional value is still noticeable. In those uses described below, it is best reconciled as a particle, since “motion towards” can no longer be understood. These uses are not noted by Woodington in Kuyunjik NB and their appearance in these corpora suggest they are a development in later NB.

ii) With verbs of removing, holding back (from) or taking (from):

a-na muh-hi sah-le-e šá a-na PN ak-lu-á um-ma ul ta-na-áš “regarding the cress that I held back from PN, saying “you are not to take (it)”, YOS 3 12: 9–12 (letter, early Nbn, U)

HA.LA šá PN u PN₂...ul-tu Ė GAL-ú...PN ū PN₂ a-na PN₂ ŠEŠ-šá-ňu GAL-ú it-ta-bal₂ “the share of PN and PN₂ which PN and PN₂ took from their elder brother from the big house”, Dar 379: 35–37 (yr 14, B)

iii) In the following, used with mahāru, it seems to have replaced ina qār₈

re-he-et KU.BABBAR a-na PN la ta-mah-har “do not get the rest of the silver from PN”, CT 22 194: 20–21 (letter, 551–522, B)

a-di 3-ta MU.MES i-di Ė PN a-na PN₂ u PN₂ ul i-mah-ri “for three years PN is not to take rent from PN₂ or PN₂”, Dar 395/396: 16–17 (yr 3, B)

b) ana as a nota accusativi. In these texts, and perhaps elsewhere in NB only, kullu⁹ and kunnu sometimes use ana with the direct object:

(9 people) šá i-na GUB-zu-šá-ňu PN...ù PN₂...a-na PN₂ ú-ki-il-šu “nine people in whose presence PN...and PN₂...detained PN₂,” YOS 6 224: 11–13 (Nbn yr 15, U), cf.:

LÜ.DUMU.DÜ.MES šá ina pa-ni-šá-ňu PN...a-na PN₂ u-ki-il-šu-á “the citizens before whom PN detained PN₂”, Camb 329: 1...4 (yr 6, B)

ina u₄-mu tPN...a-na PN...tu-uk-tin-ňu um-ma... “if (ever) tPN...accuses PN...of the following...” Nbn 679: 1...5 (yr 12, B)¹₀

---

₈ See CAD mahāru 1a 10', p55b, where YOS 3 9: 28 is cited (...ana ikkarē muhur “take...from the farmers”).

₉ Contrast these examples with YOS 3 12: 9–12 in iii, above.

¹₀ Cf. YOS 7 24: 1–8, given in III §2 i, above (ša, subordinating conjunctions). To be contrasted with ina u₄-mu LÜ.muk-šin-ňu lu-u LÜ.ba-ti-šu PN...uk-tin-ňu... “on the day that either a witness or an informer accuses PN...”, YOS 6 191: 1 (Nbn yr 12, also in ša, III §2 K above ), cf. YOS 6 214 1–5, YOS 6 193: 1–3 (both Nbn, U).
Part 2: Orthography and phonology

§1 Orthography: Patterns of spelling in the corpora

A full systematic study on NB orthography (spelling) and stress has yet to be made and is beyond the scope of this thesis.

There are several reasons for there not having been such as study, the main one being that scholars have tended to think that the number of variant spellings for the same words was an indication of the corrupt and dying nature of the language rather than realise that the criteria for spelling words were changing.

Other reasons:

a) In verbal forms and statives historically long vowels are sometimes augmented or even replaced by the > (4*) sign rather than a vowel sign.

b) Sometimes <$» appears by itself at the end of a word after a VC or CVC sign, thereby indicating a long vowel whose identity cannot be determined by script alone.

c) The conveying of plurality by the addition of MEŠ or ME onto many syllabic spellings\(^1\) gives the impression of a codified or jargonistic language existing in written form only.

There are probably two main reasons for these radical changes in the spelling:

a) On the basis of the regular use of CVCVC spellings for pars/pirs/purs nominal forms, corroborated by the evidence provided by the (admittedly later) Graeco-Babylonica (GB) texts, sound changes had evidently taken place and scribes developed their own ways of circumventing the constraints imposed by cuneiform, as will be seen below. In the case of CV signs, the indication is that when they came at the end of a word they were mostly being used for their consonantal value only. This is why it became possible to spell a word in a variety of ways. If the CV sign chosen by the scribe has the historically correct vowel it is probably the indication of a good scribal education.

\(^1\) Of nominal forms which can be singular or plural in their spelling, and which may even be followed by suffixes.
b) Linked to this development in the change of criteria for the choice of signs is the fact that scribes probably knew of the Aramaic script, whose letters were consonantal or, possibly, consonantal but with an undetermined vowel. Scribes may have applied this consonantal value of signs to cuneiform, so that the vocalic value of a CV sign could be ignored. If vowel clarification was needed, a vowel sign was included in the spelling of a word. This was usual with historically long vowels.

Before trying to examine the sound changes that had taken place from MB, it is worth looking at the main points of various existing studies on aspects of orthography (Hyatt, Winckworth, Weisberg, Aro and MacGinnis). Examining these, and then looking at scribal training will help to identify what sound changes there probably were:

1: Hyatt (1941)

It must be remembered that Hyatt is dealing with earlier NB than that under scrutiny here, although he does refer to material from CT 22, YOS 3 and later dated documents.

Hyatt observes a loss of final vowels in the Graeco-Babyloniaca texts (p3f).

In his discussion of the Aramaic incantation from Seleucid Uruk, written in cuneiform, Hyatt notes that different spellings for the same words are used, and that it was the consonants which were consistent but not the vowels, indicating that the writer was looking for the consonantal value of a sign and disregarded its accompanying vowel. If a vowel was meant to be pronounced it was added as a plene writing or \( \ddot{a} \) was used. [In fact \( \dddot{a} \) was used more than vowel signs, of which it could replace any, as mentioned above.]"
Words with short final vowels, including all verbs (in all moods) and words with suffixes, had their final sound spelled in a variety of different ways, indicating that the final vowel had disappeared.

Hyatt lists on page 23 all the variant ways in which emūqu can be spelled, arguing that these variants indicate that the scribe would be concentrating on the consonantal value of the signs. According to Hyatt it was likely to be chance if he chose either a sign containing the same vowel as the preceding syllable or the historically correct vowel. [If it is true that the scribes randomly chose any sign as long as it contained the desired consonant, as Hyatt implies, then Hyatt is suggesting that scribal training for NB must have been radically different from that of earlier periods, where lexical lists, historical or literary works from pre-NB times comprised the syllabus. Contrary to Hyatt’s belief the spelling of the NB of my corpora clearly indicates a continuing tendency to follow historically correct spellings and therefore gives evidence of a tradition in scribal training which is not so radically different from that of earlier times.]

24–27: Regarding the doubling of final consonants in the spelling, either with geminates such as dullu, qallu, or where it is unjustified, e.g. in (ša šatti) an-nit-ti, Hyatt does not think there is any great difference in pronunciation between a final VCCV or VCV.5 [He therefore does not consider the possibility that the consonant doubling may be some attempt at indicating stress or anaptyxis.]

28–35: Here, Hyatt tackles the problem of cuneiform’s spelling of C1VC2C3 forms after the loss of final short vowels. Hebrew could not pronounce pars, purs, pirs unless it inserted a light vowel before the final consonant. Hyatt wonders whether NB also inserted some kind of šewa-type vowel but concludes that it can be only a very reduced vowel, otherwise variant spellings such as šu-lum/šul-mu ka-sap/kās-pu would not be found. [The evidence provided by the GB texts and the spelling CVCVC noted in such cases as a-tar, ši-zib, ka-sap suggests a (reduced?) vowel is present. As for the šu-lum/šul-mu variations, that is simply scribal choice.] On p34 Hyatt discusses the problematic spelling of the word mahirānu in TUM 3/2 14. Line 3 has PN ma-hir-an A.ŠA and line 5 PN ma-hir-nu A.ŠA, “PN, the buyer of the field”. [ma-hir-nu appears to be an exceptional spelling and may be a reflection of the scribe being more familiar with the Aramaic script, in which long vowels were not always recorded.]

5 He uses examples from the Aramaic incantation and GB to support this: mi-in-ni (= min), mi-il-in-ni (= mi'li'in), a-tap-pi=ωδοφ, ša qin-nu=εξ κυβ.
In his discussion of plural endings on nouns and verbs, Hyatt finds that the masculine plural ending on nouns is usually spelled -ē (in both nom and obl cases, p40). On p38, Hyatt gives 3mpl verbs and statives, which usually finish with CV. Imperative plurals are usually written CV- 4 or CV-a. On 41–42 he notes some examples of 3mpl verbs which are spelled Cu-u/u.6 Because in most cases (in Hyatt’s corpus) the spelling ends with CV, he concludes that it did not affect comprehension whether an extra final vowel was given or not. If the final sign was CV the vowel was not pronounced (p44, top) and if a verb ended with a long vowel, there must have been a psychological reason for spelling it thus. He also wonders whether final weak spellings influenced the strong verb endings: [of those endings that are given long] “ip-ru-su-u endings are predominant” [i.e. more than ip-ru-su- 7]. On page 44 he reminds us of the parallel of Syriac and its vowelless and vowel-final forms for 3cpl and 2fs verbs.

2: Winckworth (1950)

Winckworth’s main issue is the use of $\text{_}$ and the possibility of its having replaced the n in the ventive plural $\text{-uni(m)}$ at some time in the period between OB and NB. He believes that the appearance of $\text{_}$ must have been due to an actual sound change rather than a new trend in spelling. Systematic research is needed to ascertain when $\text{_}$ started to be used as a vowel instead of a glottal stop.7

Winckworth makes a valid point that final n is sometimes replaced with $\text{_}$ when in pause. [It is worth noting that it rarely also happens with final m. This is a point dismissed by him.]8 He wonders whether it is significant that in most cases the lost n is a stem consonant. In citing the cuneiform Aramaic incantation (line 22) $\text{pi-la-}$ for Aramaic $\text{p\text{fl\text{a}n}$, he has avoided the traps that both Gordon and Dupont-Sommer fall into when they assumed $\text{pi-la-}$ to be feminine. The full phrase is $\text{pi-la-nu ba-ri pi-la-}$ “someone, son of someone”, for which a feminine would be unlikely as the father would be alluded to rather than the mother.9

Winckworth argues that in OB the ventive plural was dropped and $\text{_}$ replaced it, because ventives never seem to end in $\text{_}$ (p69). [Whether it did or not, or whether

6 i-tam-ru-ā, i-dib(sic)-bub-ba-ā, id-din-nu-ā (all indic, p41); bal-tu-ā “they live (indic, p42).
7 In the eighth century NB letters from Nippur, recently published by Cole (1996), there is one example: ša ta-qab-bî- “(about) what you said...” in 55: 5. Otherwise it appears to be limited to non- Akkadian names and roots with a historical glottal stop.
8 See §4, below.
9 See appendix §1b.
OB ventives actually disappeared, according to him, these verbs lost their ventive meaning and the endings that appear to be ventive in NB will have been reintroduced. His citation of is-pur-ni (YOS 3 126: 6) as an example of the ventive plural ispuruni is invalid as this is probably is-pur-<an>-ni.

3: Weisberg (1967)

p107: In his discussion regarding scribal choices of signs, Weisberg says that choices are made on the basis of the signs that are available and on personal choice. Scribal training is not discussed. [His comment that a scribe would choose a graphically simpler sign than the historically justified one has no basis in fact. For example UD is used far less often to write tu than either TU or TUM, ana is usually written a-na and not DiŠ etc.]

On p108 Weisberg states that Gelb says that scribes were influenced by the Aramaic script when writing ba-ta-ku-lu and ba-la-ta. [These types of spellings cannot be seen to be general since patterns in sign choices, especially in the writing of common words, are rendered fuzzy by scribal training. There is also no evidence that scribes actually started choosing signs that were less ambiguous than others, nor does it matter that final vowels, mimimation and case endings were neglected; these had passed out of use anyway. There is also no cause to make an argument for choosing to write hi-tu instead of (the "historically justified") hi-ta when case endings are no longer observed anyway. There is no evidence in the texts of my corpora that tu is used in preference to ta].

110–111: Regarding the spelling i-hi-ri-is-su (ABL NB), Weisberg comments that i-hi-ri-su would be explicit enough. [The i-hi-ri-is-su kind of spelling is rare in my corpora.]

4: Aro (1975)

In this paper, Aro discusses the loss of final short vowels in examples from GINBr. Although the spellings in the GB texts indicate that CVCCV became CVCVC, he asks whether all short vowels were lost. In the case of the sg suffixes, they seem to have lost their final vowel, i.e. dullak, dullaš. But this cannot happen with CVČ nouns and Aro asks how one can normalise dik-ka, tê-en-ga.
Some of his speculations are very wild: superfluous final vowels originated after a syllable which was long or stressed, e.g. *i-ba-a-ta*. Final vowels became weak and were subject to all kinds of assimilations, as happened in NA. Any vowels left are just a reflex [or overcorrection?] of the traditional spelling.

Vocal harmony is often observed.

15–17. Although the subjunctive is often retained according to “classical rules”, Aro notes that it is also often just left off and *-i* is used, especially in Persian and Seleucid times. He notes that *<- is not used for the subjunctive (p16, top), but if *<- is used only for plural endings on verbs ending with a strong consonant, is he implying that the singular and plural endings are of the same length? He therefore concludes that both subjunctive and plural forms of strong verbs are *ispuru*, singular indicative *ispur*. There is no evidence to disprove this, since CV endings are not conclusive. He also suggests (p17) that the addition of vowel signs or *<- on the 2nd/3rd pi forms is a restitution through analogy with final weak forms, which had kept their long endings. [Since *<- is only rarely used in final weak verbs in my corpora, except when the final vowel is a, I do not follow his line of reasoning.]

P18. Imperative singulars which are written with doubled middle or final radical may imply either stress on the final syllable or doubling of the middle radical, as in *mu-hur-ri* and *šup-pur*, for example. [Such spellings are very rare in my texts.]

On p19 Aro notes that the users of NB try to keep the language’s identity. [This is quite noticeable in the NB in my thesis. Far more spelling variations occur in the earlier NB of Hyatt’s study. In my conclusions I suggest that this conservatism has something to do with the conservatism of Nbk and Nbn.]

This has a small section on orthography (189–191) which deserves mention as it makes points which are not covered in the above studies. He concentrates mainly on the spelling of names. By looking at the spellings of foreign names in cuneiform and in the Graeco-Babyloniaca he concludes that a doubled consonant in the spelling does not necessarily imply a doubled consonant. He also provides evidence to suggest that the name Nidintu was probably pronounced Nidint. He explains broken

---

10 See my conclusions about the stress in §5, below.
11 See my observations below.
writings as an indication of alphabeticisation, perhaps as a result of increased contact with Elamite writing practices which Persian rule may have brought into Babylonia. Although it has long been known, CVC signs are sometimes used for which the vowel is not the expected vowel.  

§2 Excursus: Scribal training and its effect on the spelling: lexical lists and the Nabû-ša-harê exercises

A digression is now made from the corpora here to consider the topic of scribal training, the reason being that scribal training would have a profound influence on the presentation of written material. Only by knowing about the syllabus covered by trainee scribes will it be possible to identify any scribal habits which in turn would help to identify the extent to which NB was still a living language.

The numbers of lexical lists for which NB copies exist indicate that lexical lists continued to be a major factor in the teaching of cuneiform. However, the existence of lexical lists alone cannot tell us much about the programme of training which was followed, or how students progressed from copying sign lists, then word lists, to writing fluent Akkadian.

Fortunately the Iraqi excavations in Babylon from 1979–80 in the two temples 13 on the western side of the processional way 14 have now revealed hundreds of student exercises which provide an insight into the syllabus followed by student scribes. The texts (about 250) have been well examined by Cavigneaux (1979 15 and 1981) and since they provide a wide cross section of material they will be far more informative as regards training than the lexical lists alone.

Written evidence shows that the temples were built by Nebuchadnezzar (1979, p28). There was also a letter of Nebuchadnezzar (79 B32 in Appendix 2 of 1981, p139f).

12 See von Soden Syllabar pXXXV, 8. In my texts a few examples are found: maš-tir for muššur, "divulged", CT 22 193: 28 (B); it-ta-dan-nu (=din) for ittdnū “they have given, Nbn 756: 12 (B), ša-tur for šatir “was written”, Dar 447: 5 (B) and šat-šur for “(which) was written (3ms subjunctive stative)”, Dar 468: 1 (B).
13 E.NIG.GIDAR.KALAM.MA, SUM.MA, Nabû-ša-harê, and E.HILL.KALAM.MA, the temple of Ašratu. See below.
14 According to George (1985, p12), in the Kadingirra quarter.
15 Sumer 41. This has no date but covers two symposia from 1979 and 1981. Cavigneaux is providing preliminary information, so I assume 1979.
found in the rubble of the south palace, north of the temple(s)? It can therefore be assumed that the material is later than his reign. 16

The tablets were pressed into the floors in various rooms of the temples, as opposed to simply being fill (1979, p28). According to Cavigneaux, their careful positioning suggests they were deliberately placed as offerings when new fill was put on the floors. This is supported by the fact that many of them have colophons with the trainee's name and a dedication to Nabû, often with a request to Nabû to grant good fortune and academic success and a comment on its placement in the temple (1981, 37-38). None of the tablets is dated. Most of them are large and divided into columns, on which there are often different kinds of exercises demanding different levels of competence. 17 Tablets were also found in the fill of the neighbouring temple. George argues that this is the temple of the minor deity Ašratu, É.HI.LI.KALAM.MA (1985, p15). 18

Cavigneaux (1981) has presented the material according to the numbers of exercises found. If one excludes his first category (colophons, see h, below), one may assume that the more numerous the exercises, the more numerous the students and consequently the earlier the position of the exercises in the syllabus. 19

a) Sign copying
The same sign is repeated several times. Usually BAD or A.

b) The copying of sign lists Sa (Syllabary A) and Sb (Syllabary B)

c) The copying of the Anum lists of god names (79ff)
On page 80 Cavigneaux has placed most of the exercises within the definitive Anum list. 20 He gives about 240 entries. The order of entries follows the order in the definitive list almost exactly, as does the spelling.

16 Unlike, perhaps, some of the trainee texts in UET 7 nos. 126-165, in which the students practised writing Sa (and sometimes Sb) in old (paleographic) signs for which the king had an interest.
17 Although Cavigneaux does not say so, it must therefore be assumed that the exercises were produced by different students.
18 Although it is not important to this thesis, George concludes that the Nabû-of-accounting cult (É.Giš.Lâ.an Ki) was housed within the main (Nabû-ša-hârê) temple (1985, 13-15). In (1992), 311–313, he argues that the É.Giš.Lâ.an Ki temple was in the Eridu quarter of Babylon.
19 This does not explain the number of colophons. Perhaps colophons were practised earlier on in the syllabus than expected.
20 As given in Lifke (1958).
21 However, they compare well with the NB texts from Kish, nos. 135–139, in OECT 4, and OECT 12 135.
d) Hh bilingual lists

The order of entries only loosely follows the general order of canonical Hh so the exercises cannot be interpreted as direct copies of Hh. The spelling begins to show Neo-Babylonianisms. The beginning of the list is most often represented. Cavigneaux notes that the beginning often comes after the An=Anum list (p101). Since the catchline to the An=Anum lists is ur-ra: hu-bul-lum, this may have determined the order of learning. Among these, Cavigneaux finds examples of lists of kings, constellations, stones, etc.

e) Acrographic lists

These are lists of words with the same initial sign (what Cavigneaux calls "paradigmes", as they are usually lists of conjugated verbs). These were found by him to be based on the sign list Sa. Most of the exercises begin with the first five signs in Sa, in the order that they appear in Sa.

f) Lists of professions and proper names

Judging by the order of Cavigneaux's entries it is at this point that trainees scribes appear to adopt an NB way of spelling. It must be assumed that by now, trainees were able to spell words according to their historically correct form yet could also spell as they liked. This is obviously a significant point, as it implies that students could now exercise their own whims in their spelling. It is very unfortunate that no other trainee texts have been found to clarify this. Cavigneaux finds examples of lists of PNs and fPNs, both with and without DNs, and lists of hypocoristic PNs and fPNs.

g) Further evidence of the trainees' freedom of choice of signs can be seen in the model texts, i.e. letters, IOUs, legal texts and contracts. The examples on 135–136 include standard fixed legal phrases such as rašu šanāmma ina muhhi ul išallat adi PN kaspis išallimu, eli 1 manē 10 šiqil kasap ina muhhiš irabbi, etc.

23 I.e. A, SUR, SUK, HAR, AH. See Cavigneaux (1981) 118-123 for a discussion and examples of the exercises. It is extremely significant that the exercises, consisting mainly of verbs, contain NB spellings, e.g. 195 rev.: 6–7 a-man-gur, a-man-gu-ur, 67 rev. i ta-nam-[di]n. 173: 5 daš-la-tu. See also the examples in 146 rev. i' and 70 rev. ii and elsewhere. A common feature of these "paradigmes" lists, including the one in OECT 12 137, is the spelling of the same verb in two ways, with the final syllable spelled with a CVC sign then with CV-VC: a-lam-mad, a-lam-ma-ad; a-lam-miš, a-lam-mi-iš; a-šab-ba-at, a-šab-ba-at etc. Such practices may help to explain why it is the word endings that are so much more variable in their spelling than the rest of the word.

24 See the examples and comments below.

25 Personal names are also found in UET 7 147 and 180 (not copied). 147 also has a list of the fractions of a shekel. The spellings are typically NB.
h) Colophons

These cannot be fitted into the sequence of scribal training in that they seem to have been practised by students at all levels of competence. In his preliminary observations (37–38) he describes their content. He does not say whether the quality of the writing indicates that the students practised writing colophons very early on, as even the simplest exercises have quite elaborate colophons (exx. 102, 105, 106). The poor preservation makes it very difficult to determine how often different people wrote on the same tablet and which pieces were written by students or teachers. It must be noted, though, that among those colophons that are well preserved enough to be transcribed, he gives only four which are given twice on their respective tablets. The repeated piece appears to be the student’s copy. [I presume the original is the teacher’s.] Another example of one tablet with contributions by different people is 79/B1 79, which has the simplest exercises on the front (BAD and A repeated), while the reverse contains a colophon too complicated to have been done by any student.

Observations on these and the school texts from Kish and Ur

It is significant to note that the texts are never dated, and that exercises on date writing have not been found. There are only four examples of metrological exercises in Cavigneaux’s catalogue. These are all capacity measures and are written on large tablets with at least seven columns. The texts from Kish and Ur are not dated either and no dating exercises are found. UET 7 182–198 are mathematical texts, including multiplication tables, squares, square and cube roots. None is given in OECT 12. NB spellings are noted in the non-lexical and non-mathematical exercises. There are a good many legal and letter exercises in the OECT 12 texts.

Patterns of spelling observed in the trainee tablets

Some examples of spellings which identify the dialect as NB (using 1981) are given below. In examining these, it must not be forgotten that these kinds of spellings regularly occur in literary Babylonian (SB, jB). However, it must be remembered that many of these SB texts, from which the Nabû-ša-harē students copied, are copies made by Neo-Babylonian scribes. As well as the unfortunate lack of dates, there is insufficient evidence of any of these students becoming fully fledged scribes later.

26 See my introduction above.
27 59+152, 70, 186 and 206.
§3 The spelling of finite verbs, predicative adjectives ("statives") and imperatives

I now return to the main corpora to discuss the spelling of finite verbs, predicative adjectives and imperatives. Examples of these, taken from the two corpora, are listed at the end of the text. Since the point at issue here is the spellings of the inflections, examples are separated according to roots which end either in a strong consonant or which are final weak in their ending. Any which are probably questions are avoided since they would then have a lengthened ending. For ease of reference I have split some of the larger sections up into different verb classes (strong, initial weak, middle weak, primae nun, D, Š, N etc.) and I present these in the 3-2-1 singular and plural order of person as seen in the paradigms in GAG and elsewhere. Finite forms are followed by statives then imperatives.

28 As noted in part 1 §6 b ii, above.
VC and CV spellings are separated for ease of reference. In order to help separate the later texts, the Darius texts are identified in italics. The two corpora provide very inconclusive evidence that the final _suffixums remained.\textsuperscript{29} It will be noticed that, for the singular and 1cpl forms, the VC and CVC word final syllable signs are by far the commonest.\textsuperscript{30}

According to the spelling patterns the following categories are identifiable. Strong verbs are those with three consonants in the root:

a) No final vowel

i) When there is no final vowel the spelling is usually (C)VC (\textit{i-hal-li-iq, iš-kun, etc.}). This includes the singular and 1cpl of verbs and statives and imperatives ending in a consonant.

ii) The endings of the initial and middle weak verbs have CV final spellings more often than do verbs with a strong final consonant, and more so in the Uruk texts. The CV signs are usually Cu or Ca, and since the CV signs are used inter-changeably without changing the meaning, the final vowel was not being pronounced and the signs were evidently being chosen for their consonantal value only. 3fs statives, which have no final vowel, are frequently written with a final \textit{tu}, a sign often used for feminine endings in all nominal forms apart from abstracts. They are also sometimes written with ti.

b) Short final vowels

i) In the subjunctives of all verbs and predicative forms with a strong final consonant, CV final spellings are commonest. There are a few exceptions with (C)VC found among the strong verbs and these are listed first. There are no instances of a final CV being augmented by a vowel or \textsuperscript{2} (\textit{4=}) sign. Although scribal training exercises involving the subjunctive are not found, the properties of the subjunctive are still observed (d, below). Cu endings are twice as common as all the other endings put together. However, the presence of Ca, Ci and VC endings shows once again that a Cu final is probably more a reflection of the scribe's knowledge of correct historical orthography rather than evidence of a final vowel.

\textsuperscript{29} The problem of the 2fs is addressed in the sections on imperatives and questions (part 1 I §4a and §6b ii, respectively). Most of the 2fs attestations in the corpora are final weak, with suffixes, imperatives or in questions.

\textsuperscript{30} Final VC of course was the norm in the earlier dialects. The use of CVC finals is a characteristic of NB spelling.

192
ii) The final weak sg finite forms, imperatives, 1cpl and the 3ms stative indicatives are spelled with a CV (normally Ci or Ce) final throughout. On the basis of this, the ambiguous *i-he-ru-ú* in TCI 13 182: 26 must be a plural.

c) Plurals of verbs with a strong final consonant

Word final CV and often CV- signs are noted (*i-nam-di-nu*, *i-nam-di-nu-*, etc.). Subjunctives and indicatives consistently follow the same pattern, namely Cu (-*) for 3mpl and Ca (-*) for 3fpl and 2pl imperatives. As a CV sign alone is not a conclusive indication of a final vowel, the implication may be that the final vowel was no longer pronounced, in spite of the consistency of the vowels used, and that $\theta$- was used as much to convey plurality as to convey a long vowel, because in some cases $\theta$- follows a (C)VC sign (*i-nam-din-*, *i-hal-li-iq-* etc.). The examples of plurals spelled as singulars could suggest a loss of the final vowel but they are very few. However, the Cu-(*) and Ca-(*) gender distinctions indicate that a final vowel existed, but whether it was written as short or long was a matter of personal choice.

d) Plurals of final weak (indicative or subjunctive) and singular final weak subjunctives are written CV-ú throughout (*iq-bu-ú*, *i-na-ás-šu-ú* etc.). a and not a is used as a plene spelling (also noted with 2pl impvs). The long vowels therefore clearly indicate a á or á ending. Occasionally there is a Cu-* or a Ca-* spelling.

Other observations about the spelling

The spelling in the later texts begins to differ slightly from that of the earlier texts. The signs sometimes cross the morpheme boundaries, i.e. instead of CV-CV or CV-CVC one finds CVC-VC, CVC-V, CVC-* or VC-VC for V-CV-VC. This is more noticeable in the Darius texts from Babylon.

Earlier examples are:

*taš-pur-an-ni-ma* CTMMA 2 54+Nbn 380: 3 (B)

*i-nam-din-* (3mpl) passim

*šu-bil-an-na* “bring”, (2pl impv) YOS 3 33: 33 (U)

---

31 The only other regular appearance of $\theta$- is in final weak singular ventives without suffixes.

It is possible that the scribes used some kind of word-building involving the attaching of suffixes and plurals to the basic singular verb form. Similar patterns are seen in nominal forms:

- pa-qé-er-a-nu Nbn 293: 35 (B)
- pa-qer-a-ni VS 5 38: 38 (B)
- gir-ú “1/2 qth shekel”, AnOr 8 40: 9, YOS 6 223: 2 (both, U)

The reason for this may be that, as stated in chapter IV §1, above (nouns and adjectives), many nouns are written logographically, so that in plurals -ān, -ānū and -ūt (or ME/MEŠ) endings would be added to the logogram. This is particularly common among singular abstract nouns:

- GEMÉ.LUGAL-ā-tu “female slave status” and
- DUMU.DŪ-ā-tu “free citizen status”, both in Nbn 693: 12 (B)

Another development in the later texts is the use of AS for ina in verbs, pronounced in:

- ina-āš-šu-ā, ina-āš-ša-ru Camb 142: 7, 9 (B)
- ina-an-din Dar 499: 13, 15 (B)

This reflects the change in value of the signs by the time of these texts. Scribes were no longer happy to use a CV sign for a consonant and a long vowel, so a, u, i and e signs would be inserted as plene spellings to assist in the reading. The scribes observed the vowel value of the CV signs; it is very rare to see broken spellings such as ki-na-at-te-a-šū “his colleagues”, Dar 410: 5 (B) and in-za-hu-ru-e-ti “dyed red” (sg), YOS 7 7: 140 (U).

The doubling of the middle radical in the present-future is retained in most cases.

e) Observations on the use of (> (sp))

As seen in the example of i-nam-din- above, it is a scribal habit to end the plurals of verbs ending in a strong consonant with CVC-5, suggesting that may be as much a marker of plurality as an actual representation of a long vowel. It may be

---

33 This reminds one of the scribal “paradigms” exercises; however, the examples given by Cavigneaux maintain their correct syllable breaks (1987, 119–122).
34 See ina as a preposition (q.v.) and in the Graeco-Babyloniaca texts, where it is transcribed υ.
35 The broken spelling iq-bi-ā-nīš-ša-nu-tu “who (pl) spoke to them”, GCCI 2 101: 7 (Cyr yr 4, U) is probably a scribal archaism.
used in verbal forms in the same way that MEŠ is used as a marker of plurality in nominal forms. When a final long vowel needs to be shown to exist, such as in the plurals and all subjunctives of final weak verbs, a vowel sign is used. For a long ā, a is used in preference to the sign A. The A sign tends to be reserved for nouns and ventives.

\(\text{a}^*\) is used sometimes to represent the demonstrative ā “the aforementioned” in the texts from Babylon.

The development in the use of \(\text{a}^*\) in NB and NA material prior to my corpora.

i) In both Kuyunjik NB and NA, \(\text{a}^*\) is consistently used in roots with a historical glottal stop or a long vowel, such as ētēlu, ma‘ādu, re‘ā, etc. It is only rarely used without a qualifying vowel, as in \(u-\text{şap}^*-\text{lu}\) (3ms preterite, BRM 7 40: 3, 8, 13, Dilbat, ÑSU) and \(\text{mPir}^*-\) (passim).\(^{38}\)

ii) It occasionally appears as a word final instead of a plene vowel ending, in verbal and stative use only (i.e. not in nominal forms). In the NB from prior to Nbk it is very rare to find a final \(\text{a}^*\) exclusively marking a plural ending of a strong verb, exx.: \(\text{li-ta-šab}^*-\) (ABL 258: 10, letter, Esarhaddon?) \(\text{il-ta-kan}^*-\) (ABL 804: rev 12, letter, Asb?).\(^{39}\) Even in the reign of Nbk, it is not much used outside of roots with a historical glottal stop (a, above), cf. \(\text{ru-güm-ma}^*-\) ul i-ši “there is to be no complaint”, AnOr 8 8: 21–22 (Nbk yr 19).\(^{40}\)

Even more rare are examples of \(\text{a}^*\) as an initial: \(\text{m}^3\text{-la}^*-\) (Alā? ABL 275: rev 1, letter, Asb), ÚRÚ. \(^3\text{-ta-}\text{-a/ÚÚ.}^3\text{-ta-}\text{-a}\) (Utayya? Ítayya?\(^{41}\) ABL 1117: 8, 13, letter, Asb).

iii) There is one example of \(\text{a}^*\) being used for the AH sign:

\[\text{at-ta-pal-sa}^*-\] “I have prostrated myself”, CT 22 151: 13 (letter, B)

---

36 \(\text{a}^*\) is not normally used as a marker of plurality in nouns. It is possible that Ė-su ki-šub-ba-\(\) is plural: “his building plots”, YOS 7 11: 5 (U) (subject case). See kišubbu, AHw p493. In Seleucid NB, verbs are sometimes written with logograms and made plural with MEŠ or ME, for example DÜ ME-nim-ma “they came”, in BM 21946: 16, ŠUB ME “they set fire to” (iddû) and DÜ.MEŠ “they did” etc. BM 25127: 1–9. (The texts are in CCK.) Streck (1995, p114) cites a text from Seleucid year 165 (Vestnik Drevnej Istorii 1955/4 VIII: 9–10), which has i-nam-din.MEŠ.

37 i-re‘-a “he is to pasture”, TCL 13 182: 29 (Dar yr 2, U) is probably a ventive.

38 This was also noted by Woodington (15–17). She gives a long list of examples where it is used as a final sign in final weak verbs (iq-ta-ba-\(\)), or final vowels on strong verbs (id-di-in-\(\), ab-ka-\(\), āš-ba-\(\)).

39 ih-ta-has-\(\) “they mistreated” in ABL 610: 10 indicates that it occurred in NA also, but very rarely.

40 Cf. TCL 12 8: 17 (ÑSU yr 1, 668 B.C.).

41 See PKP 270 and n1737. ÚU.\(\)tu\(\)\(\)\(\)a-a in ABL 349 rev 3 (NB).
§4 Phonology and sound changes

As far as it is possible to ascertain, given the difficulties and free variation acceptable in the spelling, the NB in the corpora used the same consonants as MB and SB. However, the glottal stop no longer had phonemic value and was limited to word initial position, where it could be represented with vowel signs, as in earlier phases of Akkadian. The appearance of intervocalic “m” signs to separate two different vowels suggests intervocalic w may have been generated. The vowels a, e, i and u are used. Unstressed vowels are sometimes omitted in the spelling and it is difficult to know whether this happens because they are indeed lost in speech or whether the vowel has become a weak šewa, cf. ta-ba-la-a-nu, tab-la-nu, e-piša-nu-tu, e-piš-nu-tu, i-mah-har (passim) and i-mah-ri. (Although Deller [1962] indicates that CVC signs may read CV.CV in NA, it is doubtful that the same occurs in NB, given NB’s loss of short final vowels.)

Sound changes.

i) š+dental > ḫ+dental:

il-tap-ra “he has sent/written”, (YOS 6 71: 19) passim
al-ta-kan “I have put”, YOS 3 17: 14 (U)
il-da-a-ta “foundations”, Nbn 441: 2 (B)
al-ti šá... “wife of...”, Nbn 756: 3 (B)
il-tu-ru-ma... “(which) he wrote and...”, Nbn 442: 4 (B)
il-su-ú-uš “(in which) they called him”, Nbn 68: 7 (B)

ii) r+plosive > š+plosive

ša-áš-tu “crime”, AnOr 8 27: 23 (U)
1 U, mu-uš-šu-uš-tu “one loose ewe”, TCL 13 184: 4 (U)
iš-ku-su “they bound”, YOS 7 88: 22 (U); “(which) he bound”, Rutten: 3 (B)
ši-piš-tu “letter”, CT 22 78: 30 (B)
GU, bu-uš-tu “heifer calf”, Dar 257: 1, 10 (B)
pa-áš-ku “obstruction”, TCL 13 144: 3, 9 (B), cf.: piš-ki deceit

42 Exx. u-ba-mu-ú, u-za-mi-zu—. The problem of /m/ in these texts is discussed in appendix §2 d.
43 YOS 6 175: 2, YOS 6 235: 1 (both U).
44 YOS 6 191: 4 (twice) and the near duplicate YOS 6 214: 4 (twice) (both U). Conversely, consonants at syllable boundaries are sometimes spelled CV-C(V), suggesting a pattern of breaking up even simple consonant clusters. For a discussion of the problems of the existence or non-existence of unstressed vowels see part 3 §3, below.
45 VS 6 84: 4 (B).
46 VS 6 104: 4 (B).
47 In both Dar 395: 17 and the duplicate Dar 396: 17
48 Cf. per-ku in Camb 142: 7. The root is prk (“obstruction, deviousness”) and the plural is paškān. See the comments in appendix §3 fn 30 (akkullāt).
iii) -mt- or -md- > -nd-:

un-da-šir, tu-un-da-šir49 etc. “he/she abandoned”, passim
in-dah-su-uš “he (then) hit him”, YOS 7 97: 7 (U)50
in-da-har “(if) it is agreeable”, VS 5 20: 15, 17 (B)51
tan-di-di “(that) you measured”, Peek 22: 30 (B)

or even -dd-:

i-da-har-in-ni “they received from me”, Dar 296: 5 (B)

iv) -dd- > -md- or -nd-; -mm- > -nm-; -šš- > -mš-:52

i-nam-din “he gives”, passim
i-man-dad “he will measure”, VS 6 104: 14 (B)
i-nam-ša-nu “they guard”, YOS 7 5: 14 (U)
i-nam-ša-r[u-]> YOS 7 156: 15 (U)
nin-ša-bu “drainpipe”, Dar 129: 10 (B)

v) -dn- > -nn-:

it-tan-nu “he will have given (futurum exactum, subjunctive); they have given”, passim

vi) rš, šš > ls:

ša-ul-su-du-ú-tu “well equipped”, TCL 13 150: 2 (U)
il-su-ú-ma “(which) they read”, YOS 6 116: 10 (U)
il-su-ú-uš “they called him”, Nbn 68: 7 (B)

Other unusual changes

šš/lt, rt > tt? rk > kk:

it-ta-kan “he has set”, CT 22 200: 9 (B)
ši-pit-tu, “letter”, CT 22 79: 20 (B)
ši-ik-ka “širku slave”, YOS 7 50: 8 (U)

šp > tp:

lit-pur-ru “may he send”, CT 22 183: 22 (B)

---

49 Cyr 337: 17 (B).
50 Contrast with ni-in-da-ha-as-su “we hit him”, in line 15.
51 To be contrasted with the more “proper” spelling: im-ta-har “he has bought”, in Nbn 85: 7 (B).
52 I.e. dissimilation of doubled radical to nasal + (voiced) radical in roots with a nasal as the first radical. The dissimilated sound is usually spelled with “m” signs but sometimes also “n” signs.
Loss of final nasal? 54

-šal-la-re “he is to recoup in full”, (šalānu) Camb 373: 8 (B)

u-ru i-šā-k “he is to keep the roof sound”, (šănû) Camb 117: 7 (yr 2, B)

a-nam-di-re “(that) I shall give”, Dar 504: 8 (B)

I and r confusion?

É šā ina IGI a-bu-ru gi-iš “(regarding) a house opposite the Gisšu Gate”,

Camb 117: 1 (yr 2, B)

-qd- > -qn- is found only in the plural of bēl piqittu 55 (bēlē piqdātu in earlier Babylonian):

LU.EN.MEŠ.pi-iq-nē-e-tū “appointed officers”, YOS 6 41: 9, cf. LU.EN.

MEŠ.piq-nē-e-tī in TCL 12 90: 2, 8 (both U)

§5 Comments on the pronunciation and stress of the NB under discussion

Difficult as it is to establish how a language was spoken when the only evidence is in writing, the problem of understanding stress in the NB of these texts is compounded by the various ways in which it is possible to spell the same word. The main aim of this thesis has been to improve the comprehension of sixth-century NB and establish whether it still merits credibility as a coherent language alongside earlier NB. I shall concentrate mainly on word shape and pronunciation and make suggestions about stress where possible.

General overview

It will help to be reminded of how words are spelled in the texts. By now it will be understood that final short vowels had been dropped. Although instances of word-final (C)VC spellings exist in abundance to corroborate this, final CV signs were still being written but for their consonantal value only. As for the spelling of words

54 Cf. Streck i-re-es-si-re “he is to fulfil a prebendal duty”, (Npl or early Nbk, Uruk) from resēnu (1993b, p277).
55 The singular LU.EN.pi-qit-an-na in TCL 12 90: 25 (U) is exceptional.
with two consonants for a single one, in the NB here it seems to have been a scribal choice, in that very occasionally the scribe added a CV sign to a preceding (C)VC sign, perhaps to disambiguate the (C)VC sign.

In the earlier NB of Kuyunjik not only were random CV signs being used at the ends of words undoubtedly ending in a consonant but also the spelling regularly broke syllable boundaries. As seen from the examples in the appendix to this chapter such "unconventional" spellings are not so much in evidence in the NB of this thesis and they probably reflect a higher level of scribal training. It is known that Nebuchadnezzar and Nabonidus took particular pride in Babylonia’s heritage and almost certainly encouraged an improved programme for the teaching of scribes in the scribal schools in the main cities. The existence of Aramaic with its comparatively simple script may have been luring scribes away from Akkadian and cuneiform from prior to the reign of Nbk onwards. Whether this was the case or not, the following conservatism abounded:

- Logogram + MEŠ for a plural noun and much use of logograms (with or without phonetic complements) in general.

- Simple nominal forms were spelled CVCCV even though examples of CVCVC spellings for parsu-type nouns, along with the loss of final short vowels, indicate parsu-type nouns were generally pronounced paras, piris and purus.

**Patterns of word shape observed**

a) CVCV/CVCV > CVC (CVC?)

\[
\text{ina qi-it šá MN "at the end of Duzu", Nbn 256: 4 (yr 7, B), cf. Joannes Strasbourg 1: 5 (B)}
\]

\[
\text{mal šá ina lib-bi ip-pu-šá... “whatever he does therein...”, Dar 378: 10 (yr 14, B)}
\]

\[
\text{se-en a2 “the two (aforementioned) sheep and goat”, TCL 13 132: 5 (Cyr yr 4, U)}
\]

---

56 In the letter CT 22 82 it happens several times; see lines 25, 27, 29 and perhaps 12 (middle Dar, B).

57 As evidenced by the many student texts from Babylon and Kish, some of which were exercises in archaic signs, and also the lack of difference between the Babylon and Uruk styles. See §2, above.

58 Examples: KUR.mi-sir “Egypt”, passim; šu-lum “peace”, passim; (šīm) ha-ri-igšu “predetermined price”, passim, the name Širku as Ši-rî-kû (CT 22 189: 1; Dar 537: 7, 10 and Ši-iš-ki in line 13) as well as Ši-ir-ku and Ši-iš-ku (B), and perhaps even UDU.ka-lum “yearling sheep” (kalîmu in earlier dialects), passim in YOS 7 7 (U). The problems of stress changes as a result of the loss of final vowels are also discussed in Aro (1975). My comments on this paper are in §1 above, entry 4.
Geminate nouns may also fall in this category, i.e. C,VC,C,VC becomes C,VC,VC.\(^{59}\)

ma-am “anybody”, Peek 22: 31 (B)

ina È dul šà PN “in PN’s workshop”, YOS 6 235: 16 (Nbn yr 12, U)

È šà ina IGI a-bu-ru gi-iš “(regarding) a house opposite the Giššu Gate”, Camb 117: 1 (yr 2, B)\(^{60}\)

b) (C)VCCV preterites in verbs with a final weak consonant (not plural, subjunctive or ventive plural)

Most spellings continue to be VCCV (exx. ib-ni, im-na, taq-bi) but if the final vowel is lost an actual pronunciation and stress ib dù, imùn, tàqù must be expected.\(^{61}\) The Graeco-Babyloniaca texts provide the only piece of concrete evidence that this was the case.\(^{62}\)

ih-ri eErep\(^{63}\) “he dug”, BM 3497: 3

That a VC ending is probable for these verbs is indicated in the spelling ãš-bi in Rutten: 20 (B) for the predicative “he sits”.\(^{64}\)

c) (C)VCCV > CVCVC

Although much evidence for the CVCVC pronunciation of simple nominal forms comes from the GB, further evidence can be found by looking at nouns recently adopted from neighbouring languages. Scribal training will have involved the copying of many standard Akkadian nouns in their CVCCu or logographic form. Because loan words have no prior history in Akkadian, they will not have been practised in a CVCCu or logographic written form, so their spelling is often more representative of their actual pronunciation, hence:

\(^{59}\) The Seleucid NB of the GB texts follows the same pattern: mu-uh-hi ãE “top” Geller: 1; bir-ri ãEP “well” Geller (= HSM 1137) 3. (For the use of ã to transliterate ã see appendix §2.)

\(^{60}\) Contrast with KÁ.GAL gi-iš-šà in Dar 129: 1 (yr 4, B).

\(^{61}\) The accent marks the stressed syllable. The pattern of breaking up clusters of even two consonants (anaptyxis) is suggested by the insertion of an extra syllable (either by CVC or CV signs). The difficulty is that when two dissimilar plosives or fricatives of differing location are spoken, there is a pause (voiced or unvoiced, depending on whether the two consonants are voiced or unvoiced) between them, which the scribe may be tempted to represent as a separate unstressed syllable.

\(^{62}\) Êxx. qab-ri kErep “grave” and pal-gu ãEASY “ditch”. All examples of GB are taken from appendix §2. Aro (1955, p11), has atappu=ãEASp.

\(^{63}\) Note that the spelling beaša resembles the present i-he-ri “he is to dig” in VS 5 49: 8, 17, 22 (B).

\(^{64}\) The more traditional a-ši-ib is in Nbn 194: 8 and VS 5 57/58: 15 (both B).
Most common in mainstream NB is šu-lum “peace, wellbeing”, passim in letters. As well as the examples already given at the beginning of part 1 V, note also ba-ti-il “stoppage”, in CT 22 8: 5, bu-quš “hops”, in CT 22 79: 22 and i-ri-ib “income” in VS 5 74/75 : 6 (all, B). More unusual are the technical terms gi-di-im and gid-dil, “bunch (of palm branches)” and “string (of garlic)” respectively, in CT 22 80: 6, 7 (letter, 545–527, B).

This category includes 3ms statives and sg imperatives. Knudsen (1980) suggests the stress is on the first syllable (p3) or that there may be no stress (p15). Not too much importance should be laid on such spellings as si-rik-ki, ba-rak-ki68 as the vowel in CVC signs is occasionally variable. (2pl imperatives and final weak singular subjunctive statives and all plural statives would remain unaffected since they do not end in a short vowel.)

d) (C)VCCCV > (C)VCCVC

Examples:

MUNUS.qal-lat “female slave”, passim
qaq-qar “ground”, passim
nap-tan “meal”, VS 6 96: 3 (B)69
tam-lit, lah-rat “offspring; ewe”, YOS 7 7: 55, 109, 110, 114 (U). tam-lit is also in AnOr 8 28: 12 (U)

In the GB examples of this form an interesting pattern is observed in that occasionally the two syllables are separated by an anaptyctic vowel, (Anaptyxis in more complex word structure is discussed below.):

šap-liš կափատե “below”, BM 35727: 2, 4
ing ike-[ti] w խչաղ ե in darkness”, Geller (= HSM 1137)69

65 Both nizlu and kaslu are in the lexical items in appendix §3.
66 See CAD MI p49a, where both ma-gu-us (TUM 2/3 184: 8, Dar, Nippur) and mgwš (from an Aramaic docket, no. 1798) are cited. Kent, p201b has magu- “uncertain etymology”.
67 Knudsen begins his paper with a summary on earlier conclusions about stress (“in Akkadian” [presumably OB and SB]) then makes his own conclusions by looking at OB letters.
68 Barik-ill spelled m ba-ri-ki-DINGIR.MES in TCL 13 182: 4, 15, 21 and in the seals at the end, and spelled m ba-rak-ki-DINGIR.MES in TCL 13 181: 2, 15 (both Uruk).
69 nap-ta-nu in YOS 3 66: 22 (U).
Non-standard nouns are carefully spelled: 70

hal-lat “orchard tax (?)”, BM 36432: 1 (B) 71
UZU ha-armi-il.MEŠ “cartilage (?)”, VS 5 57/58: 2 (B) 72

In the case of the trisyllabic tab(a)lān “pilferer”, the short vowel is suppressed to
create a CVCCVC form. Contrast the following spellings:

\[ ta-ba-la-a-nu, \quad tab-la-nu 74 \]

Because unstressed vowels are sometimes omitted in the spelling (see e, below), it
is difficult to know whether this happens because they are indeed lost in speech or
whether the vowel has become a weak šewa; cf. e-piš-an-nu-tu, 75 e-piš-šā-nu-tu, 76
e-piš-nu-tu. 77 According to Knudsen’s rule 6, the word would be stressed.epiš(a)nuṭ.

e) (VC)VCCVC > (VC)VCCV C and other more complex patterns.

The suppression of a short vowel immediately following a stressed syllable (closed,
penultimate, Knudsen’s rules 1, 2, and 3) is found in ul i-mah-ri “he is not to
receive”, Dar 395/396: 17 (B) (imāhēr) (contrast with i-mah-har passim), and i-nē-
eh-su-nu “they are to deduct”, TCL 12: 90: 22 (U) (inehlichen). 78 It also occurs in
the nominal form LŪ. mu-sah-lre-el “buying agents”, YOS 3 127: 21 (U). Conversely,
as mentioned above, 79 the pause between two CVC signs may be expressed by a
sign suggesting a third syllable (anaptyxis):

\[ ki-i ta-hal-liq “when she escaped”, CT 22 183: 6 (tāhlēliq?) (B) \]

---

70 The spelling of the town Sahrīnu as URU šā-ah-ri-in (Dar 358: 22, B) indicates that it fits into
the CVCCVC category.
71 hal-la-ti in YOS 162: 1 (U). From the Aramaic root ‘Il “to enter”, according to von Soden
(1966, p 9, no.40).
72 Also in appendix §3 (lexical items).
73 YOS 6 175: 2, YOS 6 235: 1 (both U).
74 YOS 6 191: 4 (twice) and the near duplicate YOS 6 214: 4 (twice) (both U). Conversely,
consonants at syllable boundaries are sometimes spelled CV-C(V/VC), suggesting a pattern of
breaking up even simple consonant clusters (cf. e, below).
75 Dar 543: 6 (U).
76 VS 6 84: 4 (B).
77 VS 6 104: 4 (B).
78 Perhaps even in the plural ul i-rag-mu (rather than i-rag-<gu>-mu?) “they are not to
complain”, VS 5 38: 34 (B) (irdgūm?).
79 n61 in b.
ki-i ul-taq-qab-bu-ú “if you make recite” (Š futurum exactum of qabu), YOS 19 110: 8 (ultaqebū?). 80 Contrast this with ul tu-šá-aq-bi “you are not to make them recite”, in line 6 (tušaqeb?).

šu-ı-kun-la→ “set”, (impv. šuknā) / YOS 3 52: 20 (u)

It is also possible, but less likely, that CV-for-VC signs also indicate a pause (CV signs are commonly used in word final position for their consonantal value only, so such spellings may not be significant.):

pi-qf-da-a, “entrust”, JAOS 36: 10 (impv. pquda) (U)

*šu-di-gi-il “transfer”, CT 22 8: 11 (impv, šudgil) (B)

u-še-ni-iq “he emptied”, YOS 3 66: 5 (ušnq?) (U)

na-qt-ta ta-re-ša→ šá tē-ma la ta-ša-ma-→ “don’t be afraid that you (pl) have not heard from me”, CT 22 6: 7 (tarššā?...tašmā?) (letter, Cyr, B)

i-ši-ni-ma iq-bi um-ma “he spoke again...”, YOS 7 42: 5 (U)

lu-he-ni-iš “let me dig it”, YOS 3 17: 12 (U) (lühriš)

f) Nouns and verbs with suffixes

The loss of short final vowels produced a diversity of choices as far as speaking and writing nouns and verbs with suffixes are concerned. Since the suffix no longer ended in a vowel, a vowel had to be inserted between it and its preceding noun or verb in order to break up the word final consonant cluster, which meant that assimilations which had occurred in earlier phases of Akkadian did not always materialise:

mu-ti-šú “her husband”, Nbn 356: 33 (B) (subject case, i.e. mútiš, SB mussa)

PN u fPN aš-šá-ti-šú “PN and fPN, his wife”, Roth: 12–13 (Cyr yr 9, U) (subject case, i.e. aššatiš, SB aššasu) 81

in-dah-su-uš “he (then) hit him” YOS 7 97: 7 (U) (SB indahassu) 82

ta-ad-di-nu-uš “she gave him”, Nbn 1113: 14 (B) (SB iddissut) 83

Alternatively, scribes could choose to continue with the old spellings so that one still finds such examples as É-su and DUMU.MUNUS-su “her daughter”, passim; uš-ta-

80 Aro (ibid.: p14) makes the same observation about qabu. However, his first two examples are historic presents.

81 Perhaps even pronounced *alšš, cf. al-ti šā... “wife of...”, Nbn 756: 3 (B).

82 Cf. ni-in-da-ha-as-su “we (then) hit him”, in line 15.

83 nadānu is somewhat irregular in the formation of its suffixes; contrast the above with: it-ta-din-su “he then gave her” (YOS 6 79: 16, U) and the impv i-din-su “give it” (YOS 7 102: 24, U) and i-din-šu “give her” (AnOr 8 56: 15, B). For more examples see par. 83b V §3e, note i, where I suggest a dialectal difference between Babylon and Uruk exists. For the contraction of nadānu and dative suffixes see ibid. f, note ii.

203
hi-is-su (ültahśu?) “he then took him back”, VS 4 87/88: 7 (B), pu-us-su-nu na-ša-ka “I am responsible for them”, (object case) YOS 7 70: 17 (Cyr yr 8, U), ra-šu-ut-su “her claim”, VS 4 114: 8 (B) and a-hat-su “his sister”, Roth: 11 (U). Confusing the issue are non-etymologic spellings which cannot be explained, such as:

su(sic)-un-šā “his name”, Nbn 697: 2, 5 (B)

ṭē-en-ka “your advice”, (2fs) CT 22 151: 16 (B)

g) Words with suffixes of more than one syllable

On p12(h) Knudsen indicates that the addition of long suffixes does not suggest a change in orthography and it appears too that in the NB of these texts word and suffix appear to be treated as separate entities. Knudsen does not discuss the position of stress in such compounds. According to GAG §381, it is probable there is a stress within both elements:

li-iš-šu-nu-šī-nē-e-ti “let them bring them out”, YOS 3 107: 17 (U) (liššūnuš-šinēt)

šu-kun-šī-nē-e-tu “put them”, (sg impv) YOS 3 4: 12 (U) (šukān-šinēt)

aš-pur-ak-ki-nu-šā “I sent to you”, CT 22 9: 20 (B) (ašpurāk-kenūš)

id-na-ku-nu-šā “he gave to you”, YOS 3 200: 14 (U) (idnāk-kenūš)

Conclusions about the stress on the basis of the above

According to Knudsen rules 4/5 the antepenult is stressed if the penult is open and has a short vowel. Therefore I assume that in a CVCCV word in which anaptyxis has taken place the stress will remain on the first syllable. The pattern of stressing the antepenult may in fact be felt as a secondary stress in such words of more than two syllables but which end in a closed syllable containing a long vowel or if it is open and has a circumflexed vowel (Knudsen’s rules 6/7). The presence of a strongly stressed final syllable in such words as tablān and ēpišnüt will explain the suppression of the immediately preceding vowel.

In some long words the stress cannot be ascertained:

PN mu-še-ni-iq-qi-ti “PN the wet-nurse”, BE 8 47: 2 (B) (mušēniqṭ?)

84 Cf. aš-pur-ak-ki-nu-šā in line 9.
85 Note the suppression of the unstressed syllable in the ventive iddina.
86 Regardless of whether the penultimate vowel is long or in a closed syllable (cf. his examples, īṣṭapar “he has sent” and nākirū, “enemies”).
87 Cf. the above examples: lu-he-ri-š (luḥšri?): ina ik-le-[ri] ṼV xalēb (ikjēb?) and šap-liš eafolīc (šapšiš?).
Appendix to part 2

Spelling patterns of finite, predicative and imperative forms

The numbers follow the numbering in the analysis in §3 above, namely verbs, predicatives and imperatives are spelled:

a) — with a strong final radical (singular and 1cpl)
b) — with historically short final vowels, which includes i) subjunctives, ii) final weak singular indicatives
c) — plural forms, strong final radical, indicative and subjunctive
d) — weak final radical, singular subjunctive and plural indicative and subjunctive

Note that the Darius texts are identified in italics

### Babylon

a) Verbs with a strong final radical

i) (C)VC endings

1. See AHw p1387bf. It was the tradition in earlier phases of Akkadian to spell the first root consonant of this verb with such signs as *te*, *te* and *te*. However, the few spellings using *te* must imply that this verb is *tenu* and not *tenu*. Its Semitic cognate is *thn*. *te* = ti cf. *te-*e-na-* “grind”. (2pl impv) YOS 7 186: 13. The choice of signs for *t* rather than *t* indicates the tradition was upheld in these texts.

2. This unusual spelling (*id-dan?*) most resembles the usual subjunctive futurum exactum *it-tan-nu*. However, the context implies that it means the same as the indicative *inamdin*, suggesting that it comes from Aramaic (*yitten*?).

11 The context is singular but see the discussion in §3d, above (spelling, p.193).
12 The Babylonian cohortative has the same form as the 1cpl preterite.
ina ep-ša ŠU-ši-su te-el-li “he will lose the job” literally, “his hand will forfeit the work”, VS 5 49: 19

tašša-a “she brought”, Nbn 310: 9
taq-bi “she said”, Nbn 356: 2”, Cyr 337: 9
tal-te-qe “she has taken”, Camb 349: 40
taša-an-nu “she is to level”, VS 4 66: 11

ni-it-ta-ši “we took away”, Dar 296: 9
taq-bi “she said”, Nbn 356: 2”, Cyr 337: 9
tas-sd-a “she brought”, Nbn 310: 9
taq-bi “she said”, Nbn 356: 2”, Cyr 337: 9
tal-te-qe “she has taken”, Camb 349: 40
taša-an-nu “she is to level”, VS 4 66: 11

13 The full sentence is „a-mat-ka it-ti-ia tašša-an-na” literally, “your word will not change with me”, meaning probably something like “I will not deceive you”.

14 From našša, cf. RA 11: 8, given above.

15 Is actually a perfect in a negative question, “why haven’t I heard?”.

16 a-de-e sa LUGAL ul-te-en-nu-u hi-tu ša DINGIR. MES ū LUGAL išad-da-du. The context implies “they (referring to the craftsmen listed in the document) will have contravened the loyalty agreements of the gods and the king”. Contrary to Weisberg’s evidence, this must be a plural.

17 The same spelling is used for the 3ms indicative in line 12.

211

c) Plurals, strong consonant ending

id-dag-gal “they will belong”, Dar 319: 9

iz-zaq-qar “they have sworn”, Dar 551: 16

i-rag-gu-mu “they complain”, Nbn 293: 32, TCL 13 190: 22

19 This phrase usually runs as follows: n kasap...ša arah/sattu ina muhhi (1) mana šešši kasap ina muhhiš irabbi “n silver... on which there grows a monthly/yearly (interest of) 1/12 of a shekel of silver per (one) mina”. As it is a set phrase in the Babylon texts, this may explain why the verb is sometimes indicative.

25 This, pi-qf-da-a, and a-mu-ra-’ suggest anaptyxis has taken place. The expected pronunciation is *piqda*. See part 1|§4 a (imperatives) and the discussion in part 2 §9 (pronunciation and stress).
Part 3: Conclusions

§1 A summary of the main characteristics of the NB of this thesis

Syntactical characteristics

- The SOV order is retained.
- The predicative verbal adjective ("stative") common for describing a state or circumstance, often replaces the passive and sometimes is used instead of a perfect or active verb.
- Subjunctive and ventive moods are clearly retained in verbs with a final weak vowel and in singular verbs with accusative or dative suffixes.
- Verbs in subordinate clauses are not infixed with -t- unless they convey a future perfect idea (futurum exactum), nor do negated verbs except when they are the protasis in a conditional sentence (also as futurum exactum).
- A new type of construction based on the hendiadys construction is used with kī.
- The periphrastic genitive (using ša) has taken over from the construct as the normal productive way of expressing possession.

Morphological characteristics

- In the preceptive of third person D and Š forms, lu- appears to have taken over completely from earlier Babylonian li-.
- The 3fs verb begins with t- except in the archaic phrase PN šimtu ûbil “PN died” (literally, “fate took PN”).
- There is also little evidence for the survival of the 2fs verbal suffix -i.
- ana is sometimes used occasionally to indicate the direct object or the indirect object of a verb.
- Prepositional compounds such as ina libbi (“therein”) or ana muhhi (“therefore, regarding, because [of it]”) are used adverbially.
- The proleptic suffix is much used but in very restricted situations only. It becomes less common in the time of Darius.
- The 1c independent pronouns anāku and anīni have replaced the 1c dative pronouns in all but royal letters.
- The pronouns for the direct and indirect objects are the same (-š, -k, šunūtī,-kunūšī etc.).
- The loss of the final vowel on the short suffixes has led to the introduction of an extra vowel between the verb or noun and its suffix (iddinus, mutiš).

217
• The demonstrative ullû, etc. (for "Dort-Deixis") has been replaced by šuṭu, šunûtu etc.

• ̄a is a new (from Nbk onward) demonstrative adjective and pronoun meaning "that/those (aforementioned)".

• The demonstrative for "Hier-Deixis", agâ, does not change for person or gender.

• The verbal system now consists of only 12 productive tense-forms (G, D, Š, N; each with examples in iprus, iparras, iptaras). The Gtn survives in two non-productive instances in texts from Babylon.

Orthography

• CVC signs replace CV-VC signs more often than they do in earlier phases of Akkadian. Syllable boundaries are not always respected in the spelling.

• CV signs are often used instead of a VC sign for a word final consonant.

• The ʾ (ʾēl) sign is often used to replace long vowels in verbs but not in nominal forms. Long vowels at the end of nominal forms and final weak verbs (excepting ventives) are usually spelled CV-V.

• Signs with m are sometimes used for sounds other than /m/. Conversely, words which in earlier phases of Akkadian contained an m are spelled with signs not containing an m. This suggests that m was sometimes either lost or modified, perhaps to w.

• In spite of scribal tendency to spell conservatively, examples of CVCVC spellings for parsu-type nouns, along with the loss of final vowels, indicate parsu-type nouns are pronounced paras, piris and purus.

• The spellings CVCV for nominal forms and VCCV for final weak verbs suggest that both are pronounced CVC.

§2 Evidence for influence from other languages

• The demonstrative adjective and pronoun ̄a "that/those (aforementioned)" almost certainly originates from the Aramaic emphatic singular ending ʾā.

• The occasional use of the third person preterite instead of the precative is assumed to be due to Aramaic influence.

• It is possible that the loss of final short vowels is due to Aramaic influence, as is the change from the CVCCCV structure of simple nominal forms to CVCVC.
• In Aramaic, geminates are treated as biconsonantal roots in all but the Gt, D and Dt equivalents. The odd spellings for idabbub¹ “he plots, conspires” etc., may be as a result of Aramaic influence. The Aramaic equivalent would be *idāb.

• The influence of Old Persian is limited to administrative terms such as magušu, datu and gardu. OP PN s appear in the Darius texts from Babylon.

• The verb kanāzu (ak-te-en-zı “I have put aside”, YOS 3 106: 28, U) is an OP loan word also found in Aramaic.²

§3 Differences between the NB dialects of Babylon and Uruk

As stated in the introduction, the differences between the dialects of Babylon and Uruk are not great. However, as there are differences in the content of the two corpora, this lack of difference may not be significant.³

• There is a much higher incidence of purpose clauses in Uruk NB than in Babylon NB

• Regarding the demonstratives agā and annū, Uruk prefers the former and Babylon the latter.

• Regarding the pronoun copula, both sources use the standard šū etc. but the Uruk corpus uses iššū instead, perhaps with a future implication. Babylon uses iššū only once.

• Babylon has a much greater incidence of ahi...ahi “one part...the other part”, than does Uruk, but this is probably due to a content difference as ahi...ahi usually refers to the two parts (given half-yearly) of an annual rent supplement (niptu), a practice not noted in Uruk.

• The Babylon scribes appear to use more logograms than do the Uruk scribes, for example in the archaic 12 TA.AM (“twelve-fold”) and DUMU.MUNUS.A.NI (“her daughter”). kīam iqqî “he spoke thus” is an archaism found in marriage contracts, all from Babylon.

• In keeping with this last point, there is perhaps a greater incidence of scribal error in the Uruk corpus, suggesting that the Uruk scribes were not so well educated as the Babylon scribes. However, the spelling oddities in the letter CT 22 200 indicate that the Babylon scribes were not always better.

¹ la id-dab-bu “he is not to conspire”, Dar 189: 14 (B), ad-dab-bu “(if) I plotted” (pret), JRAS 1926: 16 (U); ni-id-da-bu- “(when) we complained”, YOS 3 200: 13 (U).

² HAL p191b has a derivation from OP ganz-/ginz- “treasure”.

³ The Babylon texts have a considerable proportion of Darius texts in comparison with Uruk (a ratio of more than 6:1). I have not included such characteristics as the gradual reduction in the use of the proleptic suffix and the increase in the breaking of syllable boundaries in the Babylon Darius texts.
§4 Final remarks and the extent to which the NB of this thesis was a living language

On pages 11ff Woodington queries whether Kuyunjik NB was a living language. Without actually addressing the problem or offering an opinion she gives an example of a person who is rebuffed by Sargon II for not writing in cuneiform.

It is commonly accepted that sixth-century NB was dying out. However, before establishing whether late sixth-century NB was a living language it is necessary to indicate that there are varying levels at which a language can be living or dead.

a) It is a "mother tongue", spoken everywhere by everyone whether at work or in the home.

b) it may be used at home but no longer at business (e.g. by immigrants).

c) It may be used by individuals in smaller communities within larger communities speaking a more widespread living language.

d) It may be used at business, school or the temple, but not at home.

e) It may be used as a lingua franca to communicate between groups of people who have their own individual languages.

In all these cases the languages can be considered alive, as they would still be expected to evolve over time and introduce neologisms and new idioms. The common criterion is that the language has to be productively spoken\(^1\) to be considered alive.

Whether the NB of the period 556–500 B.C. was still a spoken language is problematical as all evidence lies in written records alone, recorded on clay and only the clay survives. Aramaic may have been used much more, but the material was recorded on waxed writing boards or parchment, long perished. We are only able to base our opinion on what survives and on that basis NB certainly was a living language (of categories d and e) in the latter half of the sixth century B.C., for the following reasons:

a) It has idiomatic and colloquial usages.\(^2\)

---

\(^{1}\) Not necessarily with the mouth, as present-day sign language (BSL, ASL etc.) users will testify.

\(^{2}\) *lapān+alādu* “to have (a child) by”, *rēša + našū* “to summon”; *ina inia naskāk* “I am bedridden”, PN *su mala 100 šābê ina muhhi idabbub*, “that PN gossips about it as much as 100 workers” etc.
b) There are so many (thousands of) records of statements which one would assume to have been recorded verbatim, and which indicate that the language was fluent and grammatical. Some of the letters are solid grounds to suppose the language was alive in that they were written by the writer himself (sometimes to members of his own family) and not by some intermediary scribe. Also the content of many documents and letters is so trivial that the act of recording them in a dead language along with the expense of hiring a specialised scribe to do so would have been unnecessarily extravagant.3

c) Were NB a dead language the scribes would spell all words according to the styles found in the materials from which they learned their art, namely lexical lists and, later on, some copies of earlier NB documents. Were NB dead or just a written language, then the spelling would imitate that of the teaching texts and become far more archaic. The content of the recorded material would become very limited4 and there would be no new words coming into use. If, by chance new words could enter the language they would continue to be spelled in CVCCV patterns.

I conclude that the NB under discussion was still spoken, although it may have been limited to the affairs of long-established temples, law courts and businesses. There is no way of finding out if families of Babylonians or Urukians still spoke NB at home. The lack of difference between the dialects of Babylon and Uruk does not help the issue, as the distance between the two cities should encourage considerable difference, were NB a “mother tongue”. However, the similar educational backgrounds of the scribes, along with the enthusiasm of such royals as Nabonidus for the heritage (both material and in writing) of their country, indicate that preservation of NB was encouraged. The composition of new material, royal, historical, literary and vernacular continued.

---

3 Were such trivia merely learning texts, the scribes’ patronymics and exact date of composition would not be given.
4 As was the case in the NB of Seleucid Uruk, where the type of material recorded was quite restricted. (See the introduction, n.40 p.11.) MEŠ was used for all plurals, nominal or verbal.
§1 Aramaic works which are of particular interest for the understanding of the orthography of NB.

a) The Tell Fekheriye bilingual inscription

This statue of an Aramaean vassal king is of interest to the student of the influence of the Aramaic script on Akkadian orthography in general, in that it has on it a NA cuneiform dedication with an Aramaic translation. Its dating is problematic as some of the letters are archaised, but most recent conclusions are that it is from the 9th century B.C.¹

Of particular interest is the evidence that Aramaic was already using the consonants \( w\), \( y \) \( i \) signs as matres lectionis for long vowels and diphthongs, especially in place names and loan words:

1, 15: \( dmwt' \) "the statue"
2, 4: \( gwgl \) "canal inspector"
6,7,13: \( gwzn \) "Gozan"
7: \( ssnrwy \) "Šamaš-nūrī"
9: \( tšlwh \) "his prayer"
12: \( wyšym šmh \) "and who puts his name"
19: \( s'ryn \) "portions", \( wpys \) "parīsu- (half a kur ) measure"²
22: \( btmwr \) "in an oven"
23: \( wmwn \) "and pestilence"
23: \( nyrgl \) "Nergal"

Historical glottal steps are represented with \( s \):  

20: \( m'h \) "a hundred"
ibid.: \( s'h \) "a ewe"
22: \( w'l yml'nh \) "and may they (3fpl) not fill it"

¹ Bordureuil and Millard (1982), and Greenfield and Schaffer (1984), based on analyses of the two scripts (which both have archaisms in the forms of their characters) and the prosopography. Sader (1987, 23–29) provided evidence that it may be mid 8th century, but more recently, Lipinski summarised the evidence to date it once more to the mid 9th century (1994, 21–30).

² \( w \) for long \( ā \) is not used, cf. line 1: \( šm \) "he put", = \( šām \); line 2: \( wmwn \) lmt kln "and giver to all the lands" = \( w\mvttlt\ \lm\vttlt\ \kln\); line 23: \( m\v\)n "pestilence" = \( m\v\)t\( ā\)n, indicating that \( s \) was still used for a glottal stop in Aramaic.

³ See AHw 833b for parīsu references in the original Akkadian.
Observations

\( \checkmark \) is not used to represent long \( \ddot{a} \), only the glottal stop.

The feminine ending is written with \( h \) in the first two examples. Another example is \( \ddot{s}lh \) "basket(?) water supply(?)" (line 3).

b) The Uruk incantation in cuneiform

This was first copied by Thureau-Dangin in TCL 6: 58 (=AO 6849), and remains unique as the only completely Aramaic text written in cuneiform characters. The script places it in the context of Seleucid Uruk, i.e. at least two hundred years later than the period of the NB of this study. Hyatt has already studied it exhaustively as regards final vowel orthography (1941, 4-9) since its repetitive nature is very useful in showing that the same words can be spelled in different ways as well as highlighting the fact that the signs chosen by the scribes were chosen primarily for their consonantal value. The spelling is discussed by Gordon[4]. He notes that signs have syllabic values only and that long medial \( \ddot{a} \) was not usually differentiated from short \( a \), nor was long \( \ddot{i} \) usually differentiated from short \( i \), leaving \( \ddot{u} \) and \( \ddot{e} \) as the vowels most commonly represented.

Observations about the spelling which are of interest to students of earlier NB:

i) CV final for -C:

\begin{align*}
mi-in \quad (\text{passim}) & \quad mi-in-ni \quad \text{in line 34} < \text{ப} \quad \text{min} \quad "\text{from}" \\
1, 27, 32 & \quad na-sa-a-a-a \quad < \text{খ} \ \text{na\textasciitilde{=}} \text{yt} \quad "\text{I held}"
\end{align*}

5, 8: pa-tu-\(\dot{a}\)-ri a-si-ir li-i\(\ddot{i}\)-\(\ddot{a}\)-an, pa-tu-\(\ddot{u}\)-\(\ddot{u}\) a-si-ir li-\(\ddot{i}\)-\(\ddot{a}\)-\(\ddot{u}\)-ni ("table"= \(\text{ར} \ \text{pat}\text{ù}\)),

"the table of him who ties the tongue"

17: qu-\(\dot{a}\)-mi-ni < \text{蕲} \ qum\text{\textasciitilde{=}} \text{in} \ "\text{stand}"

19, 20: man-nu < \text{Դ} \ man \ "\text{who}"

21, 25, 33: ha-la-\(\ddot{a}\)-ni/ha-la-\(\ddot{i}\)-\(\ddot{i}\)-ni < \text{ह} \ hala\text{\textasciitilde{=}} \text{in} \ "\text{mixtures}".

22: pi-la-\(\ddot{a}\)-nu ba-\(\ddot{a}\)-\(\ddot{a}\)< \text{প} \ "\text{someone, son of someone}"

24: la-bi-\(\ddot{i}\)-\(\ddot{u}\) < \text{ল} \ lab\text{\textasciitilde{=}} \text{i} \ "\text{wearing}". Contrast with line 20: la-bi-\(\ddot{i}\).

ii) Use of the sign \( \checkmark \) (4

Gordon’s observation that long medial \( \ddot{a} \) was not usually represented is significant for our understanding of the use of the Aramaic \( \checkmark \) and Akkadian 4

4 The interpretations in Hebrew script are provided by Gordon and Dupont-Sommer.

5 The cuneiform in Thureau-Dangin’s copy does not read ha-la-qi-i-ni/ni, which is what Gordon reads as \( \text{รก} \) "leeches". He vocalises this as salak(q)lin. The Arabic equivalent is written with \( \text{š} \ \text{ain} \) and not \( \text{ة} \ \text{ghain} \). Therefore it

6 \( \text{pi-la-}\) for \( \text{p} \ \text{lain} \) is discussed in the review of Winckworth (part 3 §2, above).
Aramaic in cuneiform does not usually show kräfte then neither would Aramaic in Aramaic script, which would indicate that ważnie was being used to represent the glottal stop and not kräfte. As far as Seleucid NB was concerned irebase was no longer used to represent a glottal stop; it was being used to indicate the presence of a long vowel almost exclusively in finite or predicative verbal forms or in words with a historical glottal stop as a medial or final root consonant. It was the cuneiform equivalent of a “macron sign”.

Where the emphatic ending is used irebase is not the automatic choice of sign:

2: si-ip-pa-a  karda “the threshold”. Contrast with:
6: mi-ir-ra-prite  karda “the bitter poison”

Either this means that the glottal stop of the emphatic was no longer pronounced, or irebase was no longer directly associated in cuneiform with a glottal stop in spite of its continuing use in words with a historical glottal stop. irebase is never used in initial position. The glottal stop seems still to have existed in medial and final position in Seleucid Aramaic but cuneiform scribes did not relate it to irebase. The Babylonian scribes evidently did not hear it, or if they did, they did not see the need to acknowledge it as a separate phoneme. Woodington (p15) gives bibliographical references on irebase, whose use in Kuyunjik NB is explained as being of Aramaic influence. As roperty is not a vowel marker in Aramaic, either the Babylonian separi scribes heard the accompanying vowel and thought roperty meant the vowel, or they adopted the irebase as a convenient macron sign.

It is beyond the scope of this thesis to analyse the use of irebase in Seleucid NB. Suffice it to say that the scribes never saw the need to limit irebase in either NB or Aramaic cuneiform to its historically correct positions even though the presence of such words as ba'tašu in both languages must have drawn their attention to the correlation between irebase and the glottal stop.

نبي in medial position occurs only in line 35, bi-prite-ti-ia  nasa“my nastiness”. This, however is the only Aramaic word in the text which has a medial glottal stop in its root. The scribe may simply have recognised its very similar NB cognate which is traditionally written with irebase (long or otherwise).

---

7 As noted in the Tell Fekheriye inscription above. In Biblical Aramaic, where it was also not used, when the diacritics were later added,  in the negating or interrogative particle no  and verbs (sg, unsuffixed, feminine) used to represent kräfte. Final long kräfte was written with  in the negating or interrogative particle no  and nouns (sg, unsuffixed, nominative) with feminine endings.
8 It was also used in the Babylon texts for the demonstrative stinence.
9 Idea suggested by J.A. Black.
10 Cf. the vocalisation of Aramaic nasa“ as a calque on the Akkadian, ni-še-e, “women”, in lines 12

224
iii) Most final vowels are written CV-\textsuperscript{2}. The exception is e:

3: \textit{li-iš-šā-ni-\textsuperscript{3}} “my tongue”. Contrast this with \textit{liš-šā-nē-e} “his tongue”, in line 25.
6: \textit{di-\textsuperscript{3}} “of”
10, 26: \textit{a-na-\textsuperscript{3}} “I”
\textit{ū-ma-\textsuperscript{3}} “and”, passim

Rare exceptions to this are the 2fs impvs \textit{ri-hu-ti-i aš-ka-hi-i} “run (and) find” in line 41 but note that on line 16 the first command is spelled \textit{ri-hu-ti-\textsuperscript{3}} 𠝤�� 男神. It is interesting that the Seleucid scribe does not adhere to the spelling conventions associated with NB (i.e. where \textit{ā-} is not normally used in non verbal forms or in verbs with a final weak radical) while writing the Aramaic. However, he does continue to use CV signs in a way that shows that a CV sign on its own cannot confirm that a final vowel is present unless it is supplemented with \textit{ā-} or a vowel sign.

iv) \textit{y} is written with “ḥ” signs:

13, 38: \textit{ta-ra-ha, ta-ra-hi} <עץ “door”
4; \textit{ha-al-li-tū} <סלת 11 “I went in”

§2 Graeco-Babyloniac

Some hints as to the pronunciation of sixth-century NB may be obtained by looking at Graeco-Babyloniac (GB), a term coined by Sollberger (1962) for a particular body of material dating from at least 300 years later. The GB are clay tablets with Akkadian (and sometimes Sumerian) on the obverse and Greek (which is a transcription of the Akkadian or Sumerian) on the reverse. The tablets turn over from left to right rather than from top to bottom. Knudsen (1989, p72) calls the Akkadian late literary Babylonian. The presentation of the tablets indicates that the cuneiform was the teaching text of which the Greek was a transcription. The unfinished Schileico tablet, which has the Greek only, is evidence of some kind of letter writing exercise.\textsuperscript{12} Exact dates for these tablets cannot be ascertained (they were never dated, apparently) but the Greek script of the latest tablets appear to indicate that they cover a period from the second century B.C. to the second century

\footnote{and 37; and \textit{ga-ab-re-ē} (line 12) and \textit{ga-ba-re-ē} (line 37) for \textit{gabē} “men”, as noted by Dupont-Sommer (1942-44, p46).}
\footnote{The root is \textit{‘ll}.}
\footnote{See fn 17, below.}

225
A.D. (Geller, personal communication\textsuperscript{13}).

The extant material is very sparse but the examples follow consistent patterns. It must be noted that the signs $8$, $x$ are used for the plosives /t/, /k/ and $\tau$, $\kappa$ for the emphatics /t/, /q/. For sounds not present in Greek, the lunate sigma which resembles $\varsigma$ is used for $\acute{s}$ as well as $s$ and an invented sign is used for $\varsigma$ which looks like $\Sigma$ in Geller's\textsuperscript{14} tablet.\textsuperscript{15} Of interest to the study of NB are the following patterns of sound change:

i) Loss of final short vowels although retained in the cuneiform:

- $\text{bir}-\text{ri} \quad \beta\varepsilon \iota \text{ “well” Geller (= HSM 1137); } 3 \text{ cf.}$
- $\text{mu}-\text{uh}-\text{hi} \quad \omega\varepsilon \text{ “top” Geller: } 1$
- $\text{mu}-\text{sr}-\text{ri} \quad \omega \epsilon \varepsilon \omega \text{ Geller: } 2$
- $\text{nap}-\text{pa}-\text{sg}^{16} \quad \upsilon \varepsilon \phi \tau \alpha \alpha \epsilon \text{ “air-hole” Geller: } 5$
- $\text{sa}-\text{ag}: \text{sa}-\text{an}-\text{gu} \quad \gamma \alpha \gamma \text{ “priest”, BM 35458: } 6$
- $\text{pa}, \text{Šit}: \text{ra}-\text{a}-\text{tu} \quad \phi \alpha \epsilon \varepsilon \theta \alpha \tau \text{ “canal”, BM 34797: } 9$

Although the tablet\textsuperscript{17} published by Schileico in 1929 has no cuneiform, the following is of interest (Note also the assimilation of $\text{ana}$ and $\text{Sin}$.):

$\text{n}^\text{a} \text{Na}-\text{n}^\text{a} \text{Sin}-\text{taklåku} \quad \alpha \epsilon \tau \nu \theta \alpha \chi \phi \alpha \chi \chi \text{ Schileico: } 2$

$\rho \eta \text{ “shepherd”, Schileico: } 3$

ii) Dissolution of consonant clusters by adding an extra vowel (Sprossvokal, anaptyxis). Knudsen thinks this is due to direct Aramaic influence (p79):

- $\text{ih}-\text{ri} \quad e\phi \tau \varepsilon \iota \text{ “he dug”, BM 34797}\textsuperscript{18}: 3$
- $\text{qab}-\text{ri} \quad \kappa \alpha \beta \alpha \rho \text{ “grave”, Geller: } 4$
- $\text{ina ik}-\text{le-[t]i} \quad \upsilon \chi \omega \epsilon \nu \epsilon \theta \text{ “in darkness”, Geller: } 9$

\textsuperscript{13} His colleagues at University College, London, who have provided the datings, suggest that some may even be third century A.D, although this is open to debate. Geller is in the process of editing all available GB texts, copying all unpublished texts and recopying all published texts. Whatever their dating, it is remarkable that such a small corpus of texts covers such a wide period. All the texts come from Babylon.

\textsuperscript{14} = HSM 1137, the Akkadian incantation text from the Harvard Semitic Museum, discussed in Geller (1983).

\textsuperscript{15} See Black and Sherwin-White (1984, p136) for the use of the lunate sigma for $s$ and $\acute{s}$ and the invented sign for $\varsigma$, which I represent with $\Sigma$. This paper incidentally deals with a tablet with Greek letters only, but which so far has proved unreadable. It is not Akkadian, Greek or Sumerian, contrary to the conclusions of Maul (1991). Unlike the other GB tablets it turns over from top to bottom and is also much smaller than them. (On p131 the writers refer to Pinches’ estimate of the GB tablets in the British Museum as being about 5” high by 9” wide when complete.)

\textsuperscript{16} Is genitive.

\textsuperscript{17} This is a tablet with a letter in Greek characters on one side but the other side, intended for the student’s transcription, was not published, and according to Schileico is blank (“stark herausgebogene anepigraphe Rückseite”, 1929, p11).

\textsuperscript{18} Text discussed by Pinches (1902). The Akkadian is an extract from Hh II 203–214.
iii) Retention of final consonant cluster if the final letter is -t:

- [rapsāti] paqāc “wide”, Śamaš hymn: 1
- [pu-luh-ta] ātā “fear”, Śamaš hymn: 3
- [ina] lbur-[ri] āpī “in the well”, Geller: 10
- mitertu mītēp “canal”, BM 34797: 10

iv) Loss or modification of $m$ sometimes occurs:

- mu-uh-hi mu-uh-hi “top” Geller: 1
- ina [a]p-ti mu-ir-ti w āpēt oepē “through the window”, Geller: 2
- [nar]-1ma-ki1 warā[x] “bathtub”, Geller: 10
- lna-1-ma-ri ātēp “dawn” Geller: 7
- (ma-ri) 4UTU 1maērē “son of Śamaš”, Geller: 6
- umer ātē “days”, Schileico: 3
- Nabu-rīmmani ābṣo[ā]wēw Schileico: 2–3

But note that it is sometimes retained in initial position:

- βαβουλα μαχαξ [κουν ό οοει] “Babylon, the link with h[eaven]”, BM 34791: rev. 6.

Note also that there are no instances of $m$

Further comments on the development of $m$ in NB.

Knudsen concludes that historical $m$ is softened to $w$ then to $u$ between unrounded vowels. If the preceding or following vowel is rounded then $m$ is lost altogether (Knudsen, p75). $-mm- is kept and initial $m$ is lost only in a [rectum in a] construct chain. This latter would explain the otherwise unrecognisable $w$ for mu-uh-hi in ina ap-ti mu-uh-hi “through the top window”, However, there are so few

---

19 Given by Sollberger (1962). The Akkadian is an extract from Hh II 228–234.
20 Also in Sollberger (1962). The Akkadian is an extract from BWL 136: 194–172. The word is also spelled paqāc in Schileico: 4 (Qcov paqāc).
21 Knudsen, 75–77.
22 See AHw mušēru, p583a.
23 Further evidence that signs containing $m$ were being used to convey some kind of glide or labial fricative (/w,v/), or even /y/ can be seen in the many variations on the spelling of the names Darius and Xerxes, some containing ‘m’ signs and some not:

- Da-ri-,,-mus 16 6 166: 7
- Da-ri-mu-sū Dar 115: 6
- Da-ru-eš-dū Dar 281: 3
- Da-ru-us-šu Dar 183: 9
examples that these patterns cannot be considered to be hard and fast rules.

Judging from the spelling of NB loan words in Aramaic, intervocalic m has the reflex w in Aramaic, suggesting w in Seleucid NB and probably earlier. See for instance GAG §31a, Kaufman (1974, p142f) and Lipiński (1994, p199).

Foreign words with a w or bilabial fricative or glide are spelled in NB with “m” signs, such as Bit Amukkānī, the tribe of Chaldeans spelled byt ʼwkn navbarDropdown in the Aššur Ostracon line 15,24 ú-mar-za-na-pa-ta25 for Old Persian *vardanapati. The spelling ú-ma- or ú-mi- for the initial w-fricative is more or less standard; note the cuneiform spellings given by Kent for the Persian names Vahauka-, Vahyzdāta, Vidama- etc. (1950, p207f). ú-ma- is the spelling of wa- “and” in the Aramaic incantation in cuneiform, discussed below. Gordon explained the presence of the initial Ū sign as being necessary to make the MA sign read w-, as initial w did not occur in NB.26

For the loss or changing (to w?) of intervocalic and final m in the texts of the corpora see šuātu (V §4e, above), kūm (II §2, above) and note the spellings ú-ba-mu-ū “they are to search for”, YOS 7 1: 15 (Cyr acc, U); ú-za-mi-lzu1- “they divided”, YOS 3 200: 11 (early Camb, U) and u-za-mi-zu-šū “(when) they divided it”, ibid.: 29.27

---

24 CT 22 73: 23 (letter, early Dar, B).
26 Which he called “contemporary Babylonian”, i.e. the NB of Seleucid Uruk (1939, pill and note 32).
27 To be contrasted with u-za-‘a-zu “they are to divide” in TCL 13 160: 16 (B).

---

²ª Ak-ma-ar-šu TUM II/III 177: 17
²ª Ak-ši-ia-ar-ši TUM II/III 98: 18
²ª Ak-ši-ma-ak-šu VS 6 177: 8, VS 6 178: 9
²ª Ak-ši-š/l-š/mar-ār-ši BE 8 119: 22
²ª Hš-ši-dr-šu UET 4 50: 19, UET 4 115: 17

According to R.G. Kent, Old Persian, New Haven (1950), pp.189-90, the Old Persian is Darayavahu-, with the -š ending coming from the nominative and genitive inflections. Xerxes is Xšayāršan-. Note also the name ášªšAš-šu-ū in VS 6 166:4 (Dar yr 36), which is spelled ášªšAš-šu-ū in VS 6 177: 5 (Xerxes acc), indicating that the word for “name” was šū. The name ášªšu-lu-ū-a in the letter CT 22 66: 18 (not in the corpora), is presumably Šullumā. 228
Lexical items of interest

It is to be expected that NB and Aramaic, in coexisting with each other, should exchange loan words and idioms. Those words and idioms which have entered the NB vocabulary from Aramaic in the sixth century relate to everyday activities such as farming (exx. *gitipu, kaslu*). Some words from Old Persian also find their way into NB in the Achaemenid period. These tend to be loans from administrative and legal terminology (exx. *dātu, gardu*) and are more in evidence in texts from the reign of Darius onwards. There are also several words which already exist in Akkadian but which have acquired new meanings (exx. *labku, murruqu, zaqāpu*).

Those words and idioms which appear (as far as can be established) for the first time in the period 556–500 B.C. in the corpora of this thesis are given in the list below. I have also included a few which had already appeared for the first time during the reign of Nebuchadnezzar, because they have become far more popular during the latter half of the sixth century. The numbers from von Soden refer to his articles in *OrNs.*

*aakkullāt* "clods, clumps" is given as a plurale tantum in CAD (A/I p275bf). Although CAD stated that the word appears in Nbk and Dar, its chosen entries are from Camb 85 and Camb 142: 7 (yr 2, B).

*ba* *gani* from Aram *b* "and *gan* "in (or "with") the protection of" (AHw 96a and no. 23) is attested twice, in CT 22 74: 25–26 (letter, middle Dar, B) and CT 244: 16. Both examples are *ba-ga-ni-* ( *) RN (Darius) *ina muhhik, ina muhhikun.* The contexts suggest the writer in both cases wants the recipients to be deprived of the protection of the king.

*batar al* Neither of the two contexts in which it appears can give a clear interpretation:

DINGIR.MEŠ lu-u i-de ki-i 3 u,-mu šá a-na UNUG KI al-li-ku dul-lu-a šá ITI
UD.MEŠ la ba-tar al uš-ku-á i-qab-bu-á-na-a-šá um-ma “the gods must know it is three days since I went to Unuk. My job is a month’s work at least (?).” Afterwards(?) they tell us...” YOS 3 17: 37-39 (letter, early Camb? U). As the parallel text TCL 9 129 omits the sentence prior to *uš-ku-á*, I therefore give the tentative translation “afterwards”, for *ušku* and it therefore appears that *la batar al*

28 For Akkadian loan words in Aramaic, see Kaufman (1974).
29 Numbers 1–97 are in *OrNs* 35 (1966), 5–20; numbers 98–171 are in *OrNs* 37 (1968), 261–271 and numbers 172–242, which include amendments to the earlier sections are in *OrNs* 46 (1977), 183–197.
30 *har-ri* i-her-[ritf] *par-*ki.*MEŠ u ak-kul-lat ina-dāš-su-á “they are to dig the canal; they are to remove the obstructions and clumps’. The collated word confirms a suggestion put forward by von Soden (parku, AHw p834a) that *pasku* is a late spelling of *parku*, cf. *pa-dāš-ka-ni-šú i-šaq-qu “he is to water the obstructions in it” (to soften them), VS 5 49: 14 (Camb yr 4, B).
is at the end of its clause.

\[ i-ta-pal-lu-\text{'} mam-ma ina ku-tal-li-šá ia-a-nu it-ta-hu (or bak)_{31} ba-tar al na-si-ik ši-pir-ti LU.ša-tam EN-i-ni it-ti gi xx a-li-šá-nu […] tal-li-ku-\text{ma} "they have paid.\]_{32} There is no one backing him up...May our lord the šatam’s letter come with...their brother (?)", TCL 9 131: 10–15 (letter, Sippar? not in my corpus)

Von Soden (no. 12) suggested it came from Aramaic ba-\text{'}tar ("in the place") and hal (?), “nach jenem, fernerhin(?)” but later decided the evidence for this meaning was inconclusive.

dāt “royal decree, command” is a loan word from OP, appearing in NB from the time of Darius onward (AHw p122bf). An example is in Dar 53: 15 (yr 2, B)._{33}

\[ ĕpiš(ā)nūt \] refers specifically to the performing prebendal duties in later NB. The examples in AHw 229b suggest that the pronunciation may be ĕpiš\text{a}nūt or ĕpišnūt,_{34} e.g. e-piš-nu-tu in VS 6 104: 4(Çyr yr 8, B).

gard(u) “people conscripted to work” is an OP loan word (AHw 282a). See Stolper (1985, 56–58). An example is LÜ.ERÍN.MEŠ šá ga-ar-du, CT 22 74: 26 (letter, middle Dar, B).

\[ gidm\text{u} \] “bunch of dates on the spadix”, is, according to von Soden, a loan word from Aramaic (gidmā', AHw p287b and von Soden no. 25). gidmā' itself is not in HAL, but the Semitic roots jzm and jdm (HAL gzm, p179b)_{35} mean “to cut off” or “clip off”, so that gidm\text{u} appears to be a loan word_{36} evidently referring to the action of cutting the dates off the tree. It is in CT 22 80: 6 (letter, 545–527, B) and also appears in a Darius text, VS 3 135: 2 (yr 23 or 43, from near to Babylon, not in the corpus).

\[ gitip \] “loose”, refers to garlic in CT 22 80: 9 (letter, 545–527, B). This is derived by von Soden (no. 168) from Aram qēšipā “plucked”. Earlier publications have the spelling gidipu._{37}

---

_{31} Von Soden (no. 12) amends this to it-ta-hu-<ša?>.
_{32} Or possibly, “has he paid?”.
_{33} a-ki-i da-a-ta ša LUGAL ǔ-šal-lam “he will make restitution in accordance with the (pertinent) royal decree”.
_{34} A similar contraction is observed in tabalānu, below.
_{35} gzm is not in HAL vol V (Aramaic lexicon).
_{36} Cf. Sgṛ ّئ. It is unlikely that it is Akkadian; gadāmu "to cut off" appears twice only, in a MA text, according to AHw p273a.
_{37} Cf. gidipū (plurale tantum) in CAD G p66a.
*harmil* is a particular cut of meat, identified as “cartilage” by von Soden (AHw (p326a and no. 48) and derived by him from Aram *garmā* “bone”, and *el*, a diminutive suffix. 38 An example is in VS 5 57/58: 1–2 (Barziya, B). 39

*haruttu* “date palm frond” is derived by von Soden from Aram *hārūţā*. See von Soden no. 50 and AHw 329a. The word first appears in Nbk texts and becomes popular in the phrase *libbi (u) haruttu inanšar raṭbu ul umarrī* “he is to watch the shoots and the fronds; he is not to prune the fresh growth”. cf. VS 5 49: 6–7 (Camb yr 4, B) and Dar 35: 7–8 (yr 2, B).

*iārit, iāritūt* “heir, executor”, come from the Aramaic *iārētā* and *iārētūtā*, respectively. These two words appear only in the connected texts Nbn 668 and TCL 12 122 (both probably from yr 12, B). See von Soden no. 58.

*kasal* “land drained by ditches” (CAD K p244b) appears in three Nbn documents from Uruk, written by the prolific scribe Nadin, and nowhere else. Each time it is qualified by *kalā*. 40 See von Soden no. 65 and AHw p454a. He derives it from Aramaic *kīslā* “furrow, ditch”.

*la-, la-i*. These spellings of *la* appear with *adi la*, 41 indicating that there might be a sound change or a lengthening of the vowel. These spellings 42 are already being used for the final vowel in *agā* in Kuyunjik NB.

*labku* “moistening (of the soil under palm trees)”, is in Camb 142: 8 (yr 2, B) and the similar VS 5 49: 8 (Camb yr 4, B). See CAD L p33bf, where texts from Cambyses and Darius are listed. The month Abu (the driest month) is always specified as the month in which the moistening takes place.

*latān* is the feminine form of *lamūtān*, “servant”, from Aram *lēwa* “to escort” according to von Soden (*lamūtānu*, no.76 43 and AHw 534a). Both variants are given in the same entry in CAD (L 77b–78). Although *latān* begins to appear in Nbk, 44 it becomes far commoner in later NB. Examples are in JRAS 1926: 5, 12 (Nbn yr 10, B) and YOS 3 22: 16 (letter, early Nbn, U). How *latānu* has developed from *lamūtānu* is unclear.

38 See GVG I §223a, p402.
39 4-u HA.LA ina UZU ha-ar-mi-il.MES šā GU,MES “one fourth share of ox gristle”.
41 Examples of *la-i* YOS 3 45: 8, YOS 3 81: 26 (same scribe); of *la-ż* CT 22 148: 17.
42 And variants thereof, cf. *a-ga-ż* in CT 22 182: 11.
43 Which includes details on *latānu*.
44 CAD has examples of *lamūtānu* in ABL (NB).
maguš “magus” (OP LW), is in YOS 3 66: 3–9 (letter, Camb pre-526? U). According to CAD M/I p48bf, it occurs in Darius texts and later.

murrıq has the new meaning “to clear from claims”, in NB, especially in the Darius\(^45\) and later texts. According to CAD M/II p222bf, it has taken over from zukkū. See AHw marāqu D, p608b.\(^46\)

musahhir “buying agent, dealer” is from the Aramaic shr G/D “to go around doing business”, rather than sahāru D. See von Soden no.96 and CAD M/II p231. An example is in Stigers 36: 5 (Dar yr 12, U).\(^47\)

nāp “to include a payment in addition to rent” (von Soden nüptu, no 106, AHw 742b spB [seit 530\(^48\)]) is a denominative verb from nüptu “an additional bonus”.\(^49\) In the texts of my corpora the usual expression is nüptu nāpu and refers to paying an addition to the rent of a property at specific times of the year, usually new year and mid-year. The texts are all from Babylon and from Cambyses or later. Examples are in Camb 117: 8–9 and Dar 163: 13. Dar 499: 10, instead of the usual nüptu nāpu, has nu-up-tu, i-nam-din (yr 20, B).

bit nizil “drained land” is from nazālu “to empty”. There are two attestations, of which one is TCL 12 90: 22 (Nbn yr 7, U). See CAD N/II p 304a and AHw p799a.

nuhhuṭ “debased(?) , devalued(?)” is a term applied to silver and sometimes linen, from Cyrus onwards. The Akkadian cognate nahātu means “to make less”\(^50\) but Tropper (1995), who examines the cognate nht in the other Semitic languages, concludes that the Semitic meaning may include “cut up”, “sheared off”, or “smashed up” (p61, top). See CAD N/II p318a. Examples are in the Babylon texts VS 5 78: 3, TLC 13 193: 1 and Dar 550: 3–4 (yr 22).\(^51\)

sanāq “to need” is a new meaning for a verb which already has a variety of meanings in Akkadian. The new meaning is from Aram sēneq. See CAD S p145b

---

\(^{45}\) Cf. UD pa-qa-r u lina UGU PN IR šā PN, x is-tab-šu-ū PN, PN ú-mar-*raq-ma a-na PN, i-nam-din “if ever there is a claim against PN, PN,’s slave, PN,” (the buyer) is to clear PN of claims and give him to PN, (the seller), Dar 537: 13 (yr 22, B).

\(^{46}\) The entry for mṛq in HAL (p603a) gives no indication that mṛq in NB may come from Aramaic. mṛq with the meaning “rubbed out” (D passive) is not attested in Aramaic until the Samaria papyri of the time of Artaxerxes III.

\(^{47}\) (n dates) ina SUK.HI.A-šā-nu u-na 5 L.U.mu-sah-re-e šā PN...id-din “give (n dates) from out of their rations to PN’s five dealers”.

\(^{48}\) CAD N/I p327b has an example from Nrgl (acc yr), i.e. 30 years earlier.

\(^{49}\) nüptu is attested in Kuyunjik NB (ABL 1117: 11).

\(^{50}\) And is attested in OB and SB.

\(^{51}\) The example from Dar 550 is a-na 5/6 MA.NA <KU.BABBAR> BABBAR-*nu-uh-tū ina 1 GīN bit-qa “5/6th of a mina of debased (?) white <silver> of one-eighth alloy”.

232
(sanāqu B), von Soden no. 128 and AHw entry II, p1022b. An example is in YOS 3 33: 34 (letter, early Cyr, U).\(^{52}\)

serpu “scissors, shears” is first attested in CT 55 225: 2 (Nbk yr 33). See CAD p316a and AHw serpu, serapu, p1037b. No derivation is suggested. Examples are in YOS 7 97: 7, 16, 19, 21 (Camb acc, U).\(^{53}\)

sumuttu “a kind of ration” is proposed by von Soden as coming from summunu \(^{1}/_8\) i.e. a one-eighth ration. There are only two attestations, YOS 3 79: 10 (letter, 539–526, U) and a text from Ur, UET 4 51: 10 (Nbk, yr 29).

šamāt “to mark” is used to refer to the dedication of a person to a god in Uruk from Nbk onwards. Von Soden (AHw pl155b) says it is a denominated verb from šimtu “mark, brand”, cf. [ina] šen-du AN.BAR ša FDN i-šem-mi-tu, “they will mark them using the iron brand of the Lady-of-Uruk”, YOS 6 150: 20 (Nbn yr 11). See also CAD Š/1 307a.

tab(a)lān “pilferer” appears in a group of texts discussed by Renger (1971, p501ff), referring to lawsuits against people involved in handling precious metals in Eanna. The texts are all from around Nbn yr 12. See AHw 1296b. The only other attestation from outside of this series is in YOS 7 170: 18. Both this and two of the Nbn texts (YOS 6 191: 4, YOS 6 214: 4, yr 12, U) have the spelling ta-ab-la-nu or tab-la-nu, suggesting the pronunciation “tablān”.

te’iqtu, teqtu “trouble, inconvenience” is from Aram *teʾeqā. See von Soden no. 151 and AHw 1344a. The native Akkadian cognate is sāqu (OB siaqum) “to squeeze, encroach on”. An example is in YOS 3 21: 18 (letter, Cyr–Camb, U).\(^{54}\)

terdu šakān “to follow up(?); to create a disruption(?)” is difficult to translate. It appears only twice, in YOS 6 71: 30 (Nbn yr 6, U) and YOS 7 97: 9, 17–18 (Camb acc yr, U). It is not listed in CAD šakānu. See von Soden no. 242 and AHw p1388b, meaning 3.\(^{55}\)

\(^{52}\) LtJ.HUN.GA.ME a-na ŠUK.HI.A sa-an-qu-ı “the hired labourers are in need of rations”.

\(^{53}\) šâr-pu AN.BAR.

\(^{54}\) te starters\(=\)TI-eq-\(=\)tu, ina lib-bi-ku-nu la i-šak-kan-ı “they are not to create trouble where you are concerned”.

\(^{55}\) Von Soden seems uncertain as to whether the Aramaic originator means “checking”, or “upheaval”. The idea of checking or investigating is noted in the entry for the verb ḫad in HAL p363 (there is no noun entry).
uras “public service duty” is spelled urāsu in the other dialects in which it appears, namely Nuzi, MA and NA. The term is discussed by Dandamaev (1984, p325f) and Shiff (1987, p163), and they conclude that it refers to a public service imposed on citizens to help with the construction and repair of canals and roads. Wealthy citizens may pay someone else to do their work for them, cf. Camb 88/419 (yr 1, B).

umarzanapāt “citizen” is a loan from OP vardana- (“town”) and *pāti (“citizen”). There is only one attestation so far, mMU-šU.GUR LÚ.ši-mar-za-na-pa-ta in CT 22 73: 23 (letter, early Dar, B). See AHw p1447a.

zaqāp “to pay an indemnity” appears in legal NB. An example is in TCL 13 187: 6–7 (Dar yr 10, B).58

§4 Corpora of texts

a) Texts cited and comments on the material available

The corpora of this thesis are drawn from texts published in copy. The lists of texts in appendix §3a will show which publications have been most useful in providing material for the corpora. Other collections of copies of sixth-century and Achaemenid texts which were not accessed for examples are UET 4, TUM 2/3 and CT 55, 56 and 57.

There are 204 texts from Babylon and 179 from Uruk.

Comments on the material

Contracts have duplicates, as indicated when they finish with the words 1+en.TA.ÂM ilteqû “each one took a copy”.

Occasionally a blank may appear where a name is unreadable or the scribe may write hi-pi where the tablet from which he is copying has a break. In these cases it

56 NA, in particular, tends to use š in other words which have š in NB.
57 Note the Akkadian name, Iddin-Nergal.
58 bat-la ša i-šak-ken i-zaq-qāp “he is to pay for any stoppage which may occur”.

234
is difficult to know when the copy was made but the indications are that the copies were made by the same person who wrote the original. A particularly good example of this is TCL 13 181(Dar yr 2, U), where breaks are not only recorded but some signs on line 11 are unreadable. Presumably they could not be understood when they were copied. Marduk-nāṣir is named as the scribe of TCL 13 182, although it is not clear if he is the original scribe or the person who copied the document. Other duplicated documents, exx. VS 4 87+88, VS 5 74+75 and BIN II 115/YOS 7 23 have the same scribe in each case.

Haplography: *ana é-an-na <na>-ṣá-* “which (msg) was brought to Eanna”, YOS 7 2: 5; NIG.ŠID <šá Š>.ŠU.II “property from the storage wing”, TCL 13 170: 5 (Camb yr 5, U).59

Dittography: *ul-tu <<ul-tu>>* YOS 3 12: 19–20 (U) and LÚ.EN.pi<<pq>>-qit-tu, YOS 6 144: 5 (U), and in the following, the -na-ṣi is not a ventive; it seems to be a mistaken repetition of *na-ṣi (paris form)* in line 3:

\[
\text{PN...KÚ.GI...a-na PN}_2 a-na KU.BABBAR id-di-nu <<na-ṣi>> \quad \text{“PN gave...gold to PN}_2 \text{ for silver”}, \ YOS 6 175: 3...5 (Nbn yr 12, U)
\]

Line mix-up or omission of words or a line? (Weisberg 7). Missing verb? (Joannès Strasbourg 1: 8, after DAM-ṣū)

In the letters, equals address each other as ŠĒŠ (brother); superiors address inferiors as ŠĒŠ and inferiors address superiors as AD (father). Superiors tend to be called EN60 throughout. There is one example of a woman superior being called EN, but otherwise women (all of whom appear to be superiors) are addressed as AMA.

1) Texts from Babylon

*Note*. The texts from CT 22 are all letters

b) Dating the letters used

The two corpora contain 69 letters, 29 from Babylon and 40 from Uruk.

i) Babylon letters

The period in question is dominated by the following members and slaves of the Egibi family, and Iddin-Marduk from the Nūr-Sīn family. As the Egibi family also had some dealings outside Babylon, I have used the British Museum register, which gives the provenance of each tablet if known, to make sure that I have chosen letters from Babylon and Šahrīnu as much as is possible.

The relevant prosopographical details have been taken from Ungnad (1939), Shiff (1987), Dandamaev (1984), Driel (1985, 1986) and Wunsch (1993):
Itti-Marduk-balātu (IMB) < Nabû-ahhē-iddin (NAI) (Egibi) is attested from about 551 to 520 and is also called Iddinā. He married Nūptā, daughter of Iddin-Marduk and Ina-Esagila-rāmāt, probably in Nabonidus year 13 (543–542). Nūptā is last attested in Țebētu Cyrus yr 6 (533), by which time she had had six children.

Marduk-nāṣir-apli (MNA) (= Širku, IMB’s first son) is attested from 521 to 482. Wunsch says there are some 300 documents bearing his name.

Kalbā, adopted by NAI in Nbn yr 10 (545), appears to have been NAI’s sister’s son.65 Attested from 554 to 498, he was presumably about the same age as IMB.

Iddin-Marduk (IM) < Iqīšā (Nūr-Sīn), is attested from 57866 to 527. Since IM was active over such a long period, I have not been able to use all his material. However, I have been able to include prosopographically undateable correspondence involving his dealings in the garlic trade, as Siff and Wunsch indicate that the main period of his garlic dealings occurred around the reign of Nbn (i.e. 556–540) and later. The other letters in which IM appears are those concerning his involvement with the members of the Egibi family, and his slave Madānu-Bēl-uṣur.

For the dates of Madānu-Bēl-uṣur and other slaves from the Egibi family I have used Dandamaev (1984, 358–363), who gives the following details:

- Madānu-Bēl-uṣur (=MBU) belonged to IM from 545 to 527, to IMB from 526 to 522, to Nabû-ahhē-bullīt (= Liblut, IMB’s second son) and then to Marduk-nāṣir-apli from 513 to 506. He then belonged to MNA’s wife (Amat-Bau <Kalbā [Nabayya]) from 506 to 502 at least. When MBU belonged to IM he may have lived in Sippar. MBU also operated from Șahrīnu, which is thought to have been near to Babylon.

- Other slaves useful in dating some of the letters are Nergal-rēšūa, who belonged to IM from 554 to 527 and operated from Șahrīnu as well as Babylon, and Nabû-utēr, who belonged to IMB from 545 to 530. In the letters, whenever a particular slave has dealt with someone who has at one time been his owner, I have assumed that the slave has belonged to that person at the time of writing.

65 CTMMA I 21: 3 (Nbn yr 10). NAI brought him up from childhood and had him educated.
66 According to Wunsch (p19), year 28 is the correct reading for the year in Strm Nbk 67, and she accepts this as the earliest attestation of IM.
Note It is commonly assumed by us that the letter was dictated by the author to a scribe. Therefore the problem presents itself as to whether the letter was dictated in Akkadian or Aramaic and was then converted to Akkadian on the tablet by the scribe. Judging by the colloquial nature of the writing in some of the letters and spellings of the names (e.g. Širkū as Ši-iš-ku, Ši-rik-ki as well as Ši-ir-ku), the Egi̇bi letters at least were written as said. A significant implication of this is that IMB, Kālba, MNA and Pursū were all literate. IMB and MNA in particular, wrote many extant documents and it is therefore not unreasonable to assume they could write their own letters or at least dictate them in Akkadian.

67 See Ungnad (1939, 62–64) for compositions by Kalbā and Puršū. TCL 13 195 (Dar yr 24, B, not in the corpus) was written by Puršū about a matter concerning him; he calls himself Puršū in the text then signs himself off as Nergal-ušēzib the scribe.
68 Nbn 625, 755, 863, 1005; Cyr 58, 172 and, most interestingly, his own will (Wunsch 260, II p214f).
69 Evidence recently published by Abraham (1995, p7) shows that MNA wrote not only his own documents but for someone else (3 documents, n25). He continued writing until Dar yr 35 (487 B.C.), by which time he was in his early sixties. So far, Abraham has found 28 documents that he wrote himself, 11 of which are unpublished and written after 500 B.C.
70 These two texts include Rimūt (Rimanni-Bē?) and Arrabi, who are in CT 22 194 and 195. CT 200 is difficult in that it refers to Puršū and Kālba (making it of the Darius period) but also possibly to Belshazzar (DUMU.LUGAL, thereby making it of the Nbn period in agreement with the other three texts).
71 This is a very interesting letter from IMB to his mother Qudāšu, asking about his family while he is away on business, and evidently written after his wife's death, when Puršū, his youngest, was probably
Camb (526–522) TCL 9 124 (for MBU–IMB)

551–527 (Nbn?72) CT 22 9 (using IM, IMB and Nergal rēšā)

early Dar CT 22 73 (involves Puršū, i.e. Nergal-ušēzib, IMB’s youngest child, and MBU’s male children)
middle? CT 22 74 (for Guzānu)
middle? (513–506?) Peek 22 (when MBU belonged to MNA)
after yr 14? CT 22 82

yr 17? CT 22 83

CT 22 95–97 (Kalbā–IMB?) The introduction to all three is the same apart from CT 22 97 in which IMB is addressed SES-ia (as opposed to bēlia in the others), but is then addressed EN in the rest of the letter. The Kalbā in CT 22 95: 16 may be Amat Bau’s father.

ii) Uruk letters

Most of the letters involve important Uruk officials, usually the šatammu, qīpu and the rēš šarri bēl piqitti. In these cases I have had to make the assumption that the personalities occupied their known positions at the time of the letters’ composition and I give the dates for which the tenures overlap. Elsewhere, prosopographical evidence with reference to dated texts is given. The main prosopographical sources are San Nicolò (1941) and Kummel (1979) for the officials73 and professions and Cocquerillat (1968, 1981, 1983, 1984, 1986) for the people involved in the Uruk farming system. Three of the texts are royal letters from Nabonidus and, for the purpose of this study should strictly be considered of curiosity value only.

still a baby. See lines 33f, translated in imperatives (part 1, §4 a) where IMB enquires whether Puršū has “gone up onto the lap of Tašmētu”. Dandamaev (1984, p197) refers to IMB’s trips to Iran or Elam (?). All but one of the texts are dated to Cyrus.

72 Refers also to a son of IM and another person involved in the garlic trade.

73 See also Frame (1991). 80–82.

            | YOS 3 127 |

\(^{74}\) This letter is a little confusing in that Kalbâ starts by addressing Bu'tt then addresses both her and her husband Sum-ušin together, then addresses both individually and finally addresses both together again.

\(^{75}\) The Bēl-uballûti in this letter may be the same person as the Bēl-uballûti in the text PTS 2097 (Nbn yr 1), discussed by Frame (1991, 45–46).

\(^{76}\) On the basis of the prosopography of Kurbanni-Marduk, Ili-rēmanni and Nabû-ah-iddin (Kümmel 1993:143–144), the tenures of Kurbanni-Marduk and Nabû-ah-iddin miss each other by four months in Nbn yr 17. These two documents indicate that in reality there was some overlap. TCL 9 98 was probably written by Nabû-ah-iddin (as was JNES 1993) to Kurbanni-Marduk when Nabû-ah-iddin took over as reš šarrī from Ili-rēmanni.

Dar early  

| YOS 3 8 (using TCL 13 182) |

**Notes:**  
The letters YOS 3 21, 45, 81, 106, 116, BIN I 16 and the dating of Gobryas, the governor of Babylon and Transpotamia.

These letters are written by Innin-ahhē-iddin, and cover the period Cyr–Camb. Of particular interest is YOS 3 106, in which the arrival of Gobryas is mentioned in line 7. No records of Gobryas after 525 have yet been found but San Nicolò uses this letter as evidence that Gobryas may have continued in his post until 522, when Uştanu took over. His reasoning is based on the fact that the writer refers to the records of Nbk, Nrgl, Nbn (lines 20–21), and Camb, so the letter must therefore have been written after the time of Cambyses. However, as it is curious that Cyrus is not included, it is possible that the letter refers to the time of Cyrus and the nine

77 Using Aria, cf. YOS 7 124 (Camb yr 2).
months during which Cambyses was given kingship of Babylon. The letter ends:

\[ \text{34ki~i mim-mu}^{78} \text{ ina pa-ni} \ 34\text{Kám-bu-zi-ia} \ 34\text{a-na} \ GIŠ.\text{le-e šá} \ \text{NIG>.DU.URU} \]
\[ \text{36md} \text{GI.DU.LUGAL.URU} \ u \ \text{mdNÄ.I} \ y \ \text{ina ŠUK.HI.A} \ LÚ.\text{šir-ki tu-šá-an-na} \ 36\text{tè-en-knu} \]
\[ \text{ana UGU lu-uš-mu} \ “\text{if you change/repeat anything, from before Cambyses,} \]
\[ \text{regarding the ledgers of Nbk, Nrgl and Nbn about the širku rations, let me know} \]
\[ \text{about it”. This earlier dating may be supported by the fact that the addressee may} \]
\[ \text{have been the well known scribe Nadin (Egibi), who is last attested in Camb yr 6.} \]
\[ \text{Innin-ahhē-iddin writes to him and three others in BIN I 16. These four are the} \]
\[ \text{scribes who wrote YOS 7 7 (Cyr yr 1). Nadin is also addressed in YOS 3 116, but} \]
\[ \text{this appears to be a much later letter, as Innin-ahhē-iddin refers to having done 20} \]
\[ \text{years of work for him (lines 6–7). The prosopography of both YOS 3 21 and YOS 3} \]
\[ \text{45 suggest a date of early Cyrus.} \]

There is no evidence on the literacy of the people mentioned in the Uruk texts
(apart from Nadin). It is also not helpful that the parentage of the holders of the reš šarrī post is not known; being eunuchs, they are never given with a patronymic.

c) Selected logograms found in the texts

The signs given in this list are those particularly common to the NB of the corpora
but not necessarily common to other phases of Akkadian. Those signs which are
common to all phases of Akkadian (such as AD, DINGIR, É, MU\[.AN.NA\],
NUMUN, ZÜ.LUM.MA, etc.) are not included. The logograms UD, UGU and ŠÀ,
which also have the syllabic readings u₄, mu₄ and li₄ are transliterated syllabically
throughout in u₄-mu “day”, mu₄-hi “top” and li₄-bi “heart”, for ease of reading.

Notes on personal names. A PN will usually consist of three elements and
sometimes two.⁷⁹ If not, then it is likely to be a nickname.⁸⁰ When a logogram is
used in a PN, (i) means it is to be read thus in initial position; (m) in medial
position in a name of three (or more) elements, and (f) stands for the reading in
final position. If no comment is made, the reading appears in all three positions.

⁷⁸ Innin-ahhē-iddin’s hallmark was to use MU instead of expected MA at the ends of words.
⁷⁹ Examples of names with two elements are the scribes Mušēzi̲b-Marduk (Camb 165: 13, B), Bēl-
ittannu (Dar 446: 20 and Dar 378: 20, B), Gimi̲l-Nanā (TCL 12 89: 12, U) and Bēl-nadin (spelled
\text{MD.PE.NA\-din}, YOS 7 50: 16, U).
⁸⁰ Exx.: Bu’īpa, Gagā, Gimi̲lulu, Igšā, Nādin, Nūptā, Širkū etc.
