

Supplementary Material

5 **Figure S1: Correlation of MSD VPLEX and ELISA data.** The correlation of results across the two assays for the SARS-CoV-2 full-length spike and RBD domains, along with endemic coronavirus spike antigens is shown with Spearman's Rank correlations.

10

15

Figure S2. A schematic of the subunits and domains of the SARS-CoV-2 spike protein and SARS-CoV-2 nucleocapsid used in the MSD V-PLEX assay and ELISAs. (A) Various regions and subunits of the spike were analysed. Variable regions such as the N-terminal (NTD) and receptor-binding domain (RBD) in the S1 subunit of the spike protein, in addition to the more conserved S2 subunit were analysed.. **(B) A second antigen was also assessed, the SARS-CoV-2 nucleocapsid, which was not subdivided into domains.** A full crystal structure exists for the SARS-CoV-2 spike, whilst only partial structures of the N-terminal and RNA binding domain regions of the SARS-CoV-2 nucleocapsid exist. These are shown above.

Figure S3. Variability of aligned beta-HCoV spike and nucleocapsid proteins. (A) Variability analysis of spike protein: 3,653 SARS-CoV-2, 100 HCoV-HKU1 and 100 HCoV-OC43 spike sequences. **(B) Variability analysis of nucleocapsid protein:** 4,845 SARS-CoV-2, 100 HCoV-HKU1 and 100 HCoV-OC43 nucleocapsid sequences. Further information regarding the analysis can be found in the Methods section.
