## Preface to the catalogue, plates and figures in the text

This catalogue attempts to reconstruct the furnishings of the Late Bronze and Early Iron Age tombs of Tell el-Far'ah as they were at the time of their discovery. As much pottery and small finds as possible were drawn and described in the collections I visited. However, a significant proportion of artefacts were either missing or not available for study during the process of the collection of the data. In such cases, objects were entered into the catalogue and drawn anyway either on the basis of already existing publications (these are mentioned in the catalogue entries), or according to the descriptions given in the Museum Registers and/or the Tomb Cards.

As far as drawings are concerned, the pots whose profiles are coloured black in the plates are those which were drawn from the real objects, in museums and other collections. Those which are only outlined were either not examined (and in such case drawn after Duncan 1930 and Starkey and Harding 1932) or examined and drawn on the basis of very similar pieces already described and drawn earlier in the course of the research. If not stated otherwise, scales of the drawings are 1:2 for the pottery and 1:1 for the small finds. The figures in the text are drawn on a scale of 1:6 for the majority of the pots, and 1:12 for the large ones (storage-jars).

Measurements are always given in centimetres. For the pottery, two numbers appear which represent the height of the vessel and its maximum diameter. The only exception are the lentoid pilgrim flasks for which two diameters were taken, one on the vessel's front and one on its side. Measurements for small finds were taken at their maximum height, length and width.
