

Supplemental file 7. Cost-effectiveness when treating interventions as mutually exclusive

The figure below displays the total costs per woman and total QALYs per women of each STRATEGIC intervention and the control group in Phase 2, which are presented in Supplementary file 5. It also shows the ICERs between the alternatives when treating the STRATEGIC interventions as mutually exclusive. These ICERs and along with the incremental costs and incremental QALYs are reported in Panel G of Table 5. The figure is centred (i.e. the origin of the axes) to the control group for comparison purposes.

Supplementary Figure 7.1 Graphical illustration of the results

Supplementary Figure 7.2 shows the cost-effectiveness planes of timed appointment compared with requested self-sampler (ICER: £6,660) and unrequested self-sampler compared with timed appointment (ICER: £19,380). The cost-effectiveness plane of requested self-sampler compared with the control is displayed in Supplemental file 6.
